Greetings...
```

I have up for trade a real nice Kenwood TS-440SAT. Looking for a bit 'beefier' rig to use as backup for my FT-920. Will consider any and all trade offers for HF gear. The Kenwood is in very good condition, but has one problem...sometimes the antenna tuner acts a bit flaky and won't tune what the tuner in my FT-920 will. Will include a Kenwood MC-50 Desk microphone in nice condition for the right offer. Also includes original box, manuals, and supplemental info on the rig from INRAD. Oh yes, YK-88 CW filter installed also.f Not really interested in selling this rig, looking more for a trade. Whatcha got to offer?

Tnx, es 73 de N9LXX~~~

R. Blaine Fox

Obveiously my first impression was right.
You are a Zipperhead and you do not have a clue..
or you are to lazy to read the charter OR you are just
a money grubbing individual who has NO respect for
the News Group or it's rules...

He has not a Clue that Binaries and ASCII
are NOT used in this News Group. TEXT ONLY..

>> >" Remember, this radio IS NEW IN THE BOX" and
>> >"all electronics, sold As Is"

Brand new and not even a "No DOA"

sniff sniff something smells <G>

Just My Opinion..

Bob

I have heard about the small fractal antennas and would like to talk to
someone that has used one. I want to use it with a Kenwood TM-733 (50
watts) on 2001 Corvette.

How about URL for information

The information you seek can also be obtained for a small fee from the archives of the FCC. Can't remember exactly how, but an email to the ARRL would get you the answer... it may still be on their website if you search for it.

have a computer handy as all can see.

I have Morse Code made easy by ken Bradford but dont really know how much time to spend on it. It gets quite boring after a while.

Maybe theres a way i can make it fun . and learn fast.

Regards

1)Whatever you do, don't ask N0VFP for tips...he's been trying for 8
years to learn 5 wpm.
2) download ham university from a website.
3) PRACTICE, PRACTICE, PRACTICE.

Maybe you can find a friend also interested in learning the code.
The two of you could converse via code, as practice. Set up
two sets of keys and code practice oscillators with speakers in the same
room. Send dirty jokes or whatever, just don't use such on the
air when you do get your license or upgrade.

The key to learning code is practice. There's no substitute, no short cuts, no tricks. The only trick is to listen, listen, listen. Do what ever you can to make it interesting, but it's all practice.

I suspect a buddy system works best. Find someone else wanting to learn
the code and send to each other. There's some encouragement and
competition involved with two people.

As is the case with gloming collitch degrees, making marriages work and
sucessful parenting there are no fast tracks or instant gratifications, thus
on a much smaller scale it is with learning the code, they all take WORK,
gawd forbid. Depends on how much effort you're willing to put in vs. how much
value you place on what would come out of your efforts.

Two words of advice: CODE QUICK!

It's silly, it's cutesy, and it STICKS LIKE GLUE to the language center
of your brain! Just read the myriads of testimonials available on
USENET and in various discussion forums. I challenge you to find
anyone who says, "I tried Code Quick, and it was a dud."

In addition, I suggest downloading Morse Code Academy and practicing on
randomly generated sample exams.

I only wish there were a "Mandarin Chinese Quick" for learning Mandarin
Chinese.

I've started a new email reflector for New England ham's! All hams are welcome
to join, but the focus of discussion is the New England region. For info, visit
http://egroups.com/group/NewEnglandHam.

I know how not to do it. Don't learn it at 5wpm. See N2EY.

Well, 5wpm is just about 'memorization' speed, so you
have to ask yourself if you want to learn it right for long
term CW usage or do you want to learn it as a goal.

This falls back to the strategy that the best tool may not
always be the best tool for the job.

If you want to learn CW with the idea of being a fast
CW operator long term and being a wrist wiz on the

bands, then there are a number of proven techniques out there to get you to 10, 20, or more wpm speeds but they won't get you to 5wpm as fast as some wrong methods.

In addition, there are a number of different methods out there and some or none may work with you. Asking for the 'best' is like walking into a room full of preachers from different faiths and asking which one is the 'right one'.

On the other hand, if your goal is to just satisfy the 5wpm legal threshold as required by the current rules and regulations, there's a lot of simple methods that will get you there fast, probably faster than most of the 'better' methods.

But be aware, these 'quick starts' usually leave 'plateaus' in code speed that you will bump into later.

Now comes the question, and you have to decide what your long term goal is going to be. CW can be fun, but it's not for everyone. Unfortunately, you don't usually find out how fun until you already have gone through the effort to learn it, and now your stuck with that path. Breaking bad habits from the 'quick start' methods can be a lot of work.

On the other hand, if all you want is HF privileges and you just need that certificate....

YOU make the choice, don't let others talk you into what THEY say you 'should' do.

Mike

When you are practicing, always receive at a speed somewhat faster than you can handle.

If you can receive it 100%, then you will never improve.

True, Jack..I heard or read of some guy started people out at 40 wpm
then backed down to a lower speed......as they began to improve.
Unbeliveable, huh?

The Morse requirement for a Ham license is now only five words per minute.
1) Memorize the sound of each letter. Do not think of or picture dots and dashes. Only think of the sounds of the dits and dahs.
2) Learn just three or four letters at a time until you have learned the whole 26 letters of the alphabet.
3) Memorize the sounds of the ten numerals and the punctuations(- , . ?)
4) Once you really can remember the sounds of each chartacter you will be able to copy Morse at five words per minute, with not too much practice. Use a good computer program, such as Morse Academy. Get your speed up as high as you can, but do not attempt to go above ten words per minute before taking the 5 wpm exam. Some folks find it hard to copy very slow CW after they master higher speeds. You might find that

it is difficult to go faster than about ten words per minute at first,
as this is normally a barrier for most beginners and usually takes a
considerable amout of practice.
5) When you are ready take the Element 1,2,3 Ham exams and get licensed
as a General Class Radio Amateur.
6) If you enjoy Morse code, (Some do...Some don't) keep practicing.
When you get your ham license you can make CW QSOs on the air. There
are some very patient hams who will be willing to QSO with you at any
speed.
There are others who aren't very patient...unless you are calling from
a rare QTH.

I hope that this has been of some help. The other suggestions in this
thread are also very good.

73 es
Good luck.

Morse as a religion has been hashed out here before.

Plateaus? What plateaus? I've been told that I'm the only one who ever
experienced a plateau.

Mike, all the above supposed some higher knowledge of morse learning
theory than your average prospective Novice posessed. Luckily today
with the no-code license you get exposure to choices before going for a
coded license.

Perhaps we need a de-programming camp in the swamps of Florida where we
can do a data dump on those 5wpm tapes. Every time we start counting
dits and dahs, we get bitten by a fire ant.

Wideband data Tx on 6m, interesting; I hope you live out in the wilds
else I guess you'll have the neighbourhood knocking on your door when
you Tx.

Mike

Problems with sensitivity when recieving around 15 metres and bottom of 11 metres.

Any clues?
seems to work very well around 10A 10B 10C and 10D.

Tried everything.

Suspecting PB1183 Low IF boards IF amp Q3

if any information where to look and how to bring this thing back to life, would be much appreciated.

Email ezypezy@ureach.com

regards

I give it a 9.5 on the Troll-o-meter.... Not as good as the regular "know
code = no ham" or whatever the other troll sloshes in here every couple of
weeks, but it's a good one.

Hmm.. Why have I not ever seen the msg you replied to?...
But... To me, it's no different than any other "past-time..."
I remember it being awfully boring learning to play the piano & g'tar, driving, etc....
It was the same with quite a few things that I now enjoy, now that I think about it...

Not that I don't enjoy learning some new things... ;)

I recently purchased the ADI at-600 dual bander and ordered the computer
program to simplify programming it. the instructions are rather vague
and can't seem to get it to work. basically I have two open 9-pin ports
on the back of my gateway2000 PII-266/128 ram computer. ive set the com
ports in the program for each one...com1, com2 etc etc and tried to load
from the ht to the computer and nothing happens. any way to identify
which port is which? I'm supposed to test on the tenth od DEC so no
c-sign yet just an ignorant newbie that needs help.

A.Martin

With cable, it depends where you are. I was on a visit to London in the UK, and got on line via my bro-in-law's TV. Monday OK, tue ok. In fact ok til Friday. But Sat & Sun, when everybody gets on line, you get ZIP. The spectrum in cable is limited, and WILL get filled up. Use it while you can. I did. Now I'm on Hi speed Sympatico. Not as fast, but no crowding.
Jack

Not really... But who better to get such answers from than people using the same exact hardware with the same company in the same area, who also happen to be hams?...
Think about it.. Most of the people HERE will be in totally different situations, environments, etc..

Might as well ask an Alaskan about the job situation in Texas, doncha think?
;)

I recently purchased an ICOM-251A at an estate sale. It's a great radio and a classic, but it does not have PL tone capability. I have a tone generation board that I can use, but I don't have a schematic of the radio to figure out where to insert and power the tone. I have contacted ICOM, but as yet haven't had much luck. Can someone help me?

If you have ever added PL tone capabilities to an 251A, I would like to hear from you. If you have suggestions on what to look for, I would also like to hear from you. If you have, or know where, I can get a copy of the technical manual or schematic for the radio, please let me know.

I would appreciate all input. Please e-mail at my regular addresses of:
jjweinb@earthlink.net or w0qo@arrl.net.

Thanks and 73's.

Jeff Weinberg

Maybe you just didn't understand it, Eddy?...
How could you possibly know for sure how his setup will effect ham-radio?...
You can guess by comparing your system to his, but a neighbor ham should be
able to give him a much better idea about what's going to happen...

If you mean "Slow Scan TV" and NOT Amateur TV.... NO.  SSTV requires an
interface of sorts for your PC. (some are VERY reasonable & cheap to
build... Hamcomm, etc)

Amateur TV (UHF) can be seen on a cable ready TV using an outside antenna &
tuning to CABLE channel 60 assuming the signal's strong enough for your TV.

BD,

    You made reference to Extra Class as though you may hold
that class license? I didn't see your call listed. It is?

Unfortuately I have to give you a lawyers answer. "MAYBE". It depends
upon the tuner on your tv. Some are tunable and some are not.
Many of the portable TVs have tunable receivers. Sometimes they reach
and sometimes they don't.
Best I can do.

Since there's forsale groups, why cross-post the cr*p to the rest?
Don't you think we'd go to the forsale groups if we were interested in
buying?...

As I've explained before..
Think about it for a sec, ok?
Would it make much sense to use fake name here and then post my
call-sign?...
What would be the point in using a fake name? ;)
If so much personal info couldn't be obtained with it, I'd have no prob at
```

all posting it here, but...
And I've yet to get any junkmail (that I know of), sales-calls, etc. as a
result of using it on the air, so that is somewhat different...

Maybe you should learn to read...BD!

He asked what OUR experiences are, I don't recall him asking where he should go for info.
I never once suggested that I knew his set-up.. I WAS JUST ANSWERING HIS QUESTION.

Read his post again... PLEASE and ask your self if YOU answered HIS question.

```
Man...talk about reading in-between the lines!

RELAX DUDE!

OK, try to read what he has first posted.
Ok, read it again.

Now read what you wrote.
Read it again.

How do you know he hasn't done this already?
He already knows that some modems cause problems. Which tells me that he is starting to do his homework
When it comes to cable modems, they don't behave differently in different parts of the country, hardware is hardware.
But different modems do behave differently, and that is what he is asking.
Now I know that some cable companies are different from others, but with the right coax, connectors and grounding they all pretty much are the same unless they have amp or trunking problems(which would only affect his immediate area).

You see, I have contracted out to cable companies for many years and know how the system works.
The question this person is asking is the best possible question, NOT.. maybe you should go down to your local ham club to find maybe one or two people who have cable. I know I wouldn't want to base my decision on that kind of data.

Start with the modem, that's where the problem is, other then proper grounding.

So you see, Your little "dontcha think" answer was just an "I don't have any idea what I am talking about, but I just have to type something" kind of an answer.

I would suggest that you leave your simplistic little answers to yourself unless you have some valuable data to back it up with.

I probably wouldn't have responded to you, but you just had to throw

in that "doncha think"!! Does this make you smarter? You make it
sound as though he was too stupid to think of that himself! DONCHA
THINK?

I don't waste my time with contests, as I've said several times in the past.
It's like visiting places vs just driving thru 'em so you can stick another tack on the map.
Waste of time, iow. I like to spend time getting to know my contacts.

That's not what started this.. I didn't start out trying to correct anyone..
you did..
I simply made a comment.. "Might as well ask an Alaskan about the job
situation in Texas, doncha think?"

Was this quote written about you?...
"You can take them out of the slums, but you can't take the slums out of them..."
You'll find a fight in anything, so I have to wonder... Everything I said after the reply to him has simply been "let's see how riled up we can't get him" replies to YOU and your dumb-donkey attitude...
Get it? I simply suggested that HE might get a better answer from people in his own neighborhood... Which would obviously be the guys in his ham club..
If he had already done that, he could have simply said so or ignored what I said.. IT WAS JUST A SUGGESTION...
Now, go back to your whining about not getting enough assistance or whatever...

You just can't stand being hit where it hurts, huh?
(Now, THAT's profound sh*t, huh?)
I've noticed that most contesters seem to get very upset when you compare 'em to the vacationer who's travelling for no reason other than the 'trophy' he gets by sticking another state on the map he's got on the back of his motorhome or whatever.. They can always give you a few textbook answers about the sites they've been to after the fact, but that's about it....

```
So "What's the point" if not just 'trophies' to brag about, huh?...
And, no, I really don't expect any more of an answer from you than what's
quoted below...
You're just a typical contester, "as I said before..."   hehe..

Except that you had to take it out of context to CREATE an argument (see my other post), didn't you?.. You removed the "smiley-face" for SOME reason..
Why?.. No answer, huh?
What I actually said was...
"Might as well ask an Alaskan about the job situation in Texas, doncha think? ;)"
Humor, dude.. Now, get your blood-pressure down.. Maybe go play some basketball or something...

You refering to the Extra class license or the ability to do 30wpm cw?...
I think you'll get quite a bit of disagreement on either one, dude.. ;)

Riled up?? LOL
I'm just having some fun, but it sounds as though you need to put your cane down and ease back in your rocker!

Dumb donkey?? hehe never heard that one before!

All I am saying, is that he asked a simple question and your first reply points a finger as if he is not smart enough to ask around. It is quite obvious that he has done some homework DONCHA THINK? Your suggestion was fine, but it was the last comment that suggests you being superior and him being inferior.

You have this tendency of trying to make people look stupid... it's
just YOUR insecurities.
Read some of your previous posts!

Tell me, I your life do you always get into arguments? You seem to
get into a lot of them in this and other newsgroups, which would tell
me that you are very insecure and that...a) you are very
argumentative life and go on without listening to what others are
telling you.   or b) you get pushed around and this is just a form of
relief.

Please read some of your past posts as if you didn't write them...
One little word sometimes says a lot!

Just to prove a point to my other post...

Re: That HAM Movie, "Frequency"
YOUR QUOTE
"Duh... You really didn't see anything 'glaringly wrong' about it?
.;)"

I left your little smiley in for you. I see it's your little security blanket.
Do you think you really needed to type "Duh"?
Again, your insecurities lead you to putting down others.

ANOTHER QUOTE
"A General with 13word code... Really impressive........ Not! ;)
Try for Extra with 30, dude...
Now go out and Dentron some more bad-guys, Dentron-Man!
But be sure to cancel your inappropriate cross-posting first."

Now you resort to personal attacks. Is General 13 a bad thing?
My question to you is... what are you? Moreover, does that make you better? I didn't realize this was a contest! A definite insecurity problem.

YET ANOTHER QUOTE
"I don't know the answer, banjass... And I'd be willing to bet that you
don't either...
For some really strange reason, the people who act like they know the most
are usually the ones who "have no clue..." The real experts dont usually
need the ego-fluffing you types get from putting others down."

banjass?... i am betting you thought that was smart of you.

Your last sentence... LOL This you to a "T" LOL
I couldn't have said it better!!

I have noticed that you have a little quote that you like to use regularly...
"Think man, think.."
I am guessing that your father repeatedly told you this from a young age. It seems to come up a lot!

I don't feel you are a stupid person, I think that you just need someone to pat you on the back occasionally.
You sometimes seem to know what you are talking about, but you always put that one little thing in your sentence or paragraph that diminishes the person you are talking to.

Try to give a person a helping hand without pinching him while he is getting up.

The problem is that they have too many people on a node.
A node consists of a calculated number of square city blocks. When
the node is being used to the max, it can be split up into smaller
nodes.
This is where you have to hound your cable company!

Your best bet is to find another ham locally to help you with your new HT. They really aren't all that hard to figure out once you get the hang of it.

As for the "nasty language" you heard on the air.... don't follow a bad example. You are correct in your assumption that this is illegal behavior. Find another repeater to call 'home'.... one where common courtesy and decent language is used. From what I've read, the Los Angeles area has some major problems on their 2m repeaters.

Hello,

Our hunting party has grown over the years and we have been required to spread out over about a 5-mile radius. I am looking for specifications for some two-way radios that would allow us to stay in communication with one another.

The terrain includes forests and moderate hills (at most 200 - 300 feet high). Would anybody have any specifications or product suggestions to allow me to accomplish this?

Thanks in advance!

Be sure to check out the newly alocated MURS CB band in the VHF
frequency range.
You are allowed 2 Watts and a choice of several VHF frequencies in
the 150 MHz range.
This is developing as we speak and is being opposed by Motorola.

So be sure to check the link below for updates.

Didn't catch it. Fill me in 'cause I didn't know the FCC was allowed to braodcast or even transmit on 10, or anywhere else for that matter.

5 mile distances with good consistant coverage is a bit difficult to manage for what is available to those who are NOT licensed amateur radio operators.

Naturally, as an amateur operator, I would recommend that you all get your licenses, but, seriously, as hunting season is upon us.......... does Nextel offer radio / telephone service in your area? I know quite a few hams that even use Nextel as the off both excellent cellular phone service combined with free private 2 way radio communications via their system.

The cost is equal to normal cellular service and the free radio service is, as I am told, fantastic............ just a suggestion, but as most folk have a cell phone nowadays, why not put it to the group that you guys all dump what services you have and opt for a Nextel package deal?

BTW......... I do NOT work for Nextel and I personally do NOT subscribe to their service. If you are really interested though, directly email me and I will put you in touch, via email, with a freind who has used Nextel for a few years now.

Not a particularly bad choice.......... but 2 watts on VHF @ 150 mHz may not be good enough for simplex work (radio to radio for you cjustus@seritis.com) in hilly terrain.

However, by relaying messages to those on the fringes, from those in the middle, this may be a good cheap way to keep in touch.

Nice answer. Care to elaborate?

Sasha: a search of Deja News seems to indicate that they've moved to a system using the RD-LAP protocol, for which there seems to be no decoding software available to 'civilians'. Yet.

Hi Folks.  I am considering getting cable internet access.  However, I
have heard that some cable modems can radiate a considerable amount of
RF in the HF and/or VHF/UHFspectrum.  I would like to hear about your
experiences with cable modems in this respect, good or bad.  Please
include cable modem brand names and model nubmers!

Thanks.

I am using a Toshiba cable modem model PCX 1100 and I have not experienced
any problems to date. Although most of my listening is in the hf spectrum,
I do have a vhf/uhf scanner and haven't noticed any negative effects as yet.
Brian Denley

I use what is called SURFboard SB3100 cable modem  made by Motorola and
there is no signs of RF at all. I'm very well pleased. Good luck .

Cable modems transmit in the SW spectrum, but there should
be very minimal signal leakage.  If any leakage is noticed,
your provider would want to know about itand repair it
because it indicates potential problems with your service.

And what cable-co do you have?...
Mine would sched me for repair service 2-3 weeks "down the road", let me
wait around all day for it, then tell me to wait another 2-3 weeks because
of over-worked workers or whatever after I call 'em wondering WTH they
were...

The Motorola AC power adapter caused problems in the very early
products. As long as the modem is at least 2 years or newer, the problem
should be gone!

Bonjour, je souhaite d�brider un kenwood TS 430 en �mission.
Le texte suivant trouv� sur internet r�pond -il � ma demande ?
Je ne vois pas ce que signifient les mots mars/cap dans le titre !!
```

>Transmit enable for mars/cap frq for the TS-430S
>For MARS and CAP transmit capability, a minor change is required:

>Unplug the DC power cable.
>Remove the top and bottom covers of the set.
>Locate the RF unit connector 10. Diode D39 is near the connector (labeled D39 on the circuit board). Take a small pair of diagonal cutters and clip
>the lead at the top of the bend.
>Locate IC-2 on the Control Unit, under the IF unit. Resistor R148 is near IC-2, clip the resistor lead.
>This completes the modification. Reassemble the unit, being careful not to pinch any leads.

Merci Welldan

My US Robotics CMX makes no noticable noise. My Router/LAN makes some
noise, including a nasty spur on 810, which obliterated KGO. An
MFJ-1026 (modified) took care of that.

Power Supply that came with my modem put out all
sorts of HF trash.
Manu: APS - advanced power solutions.
Model # is: AD-715U-2205

```
P/N is: 62479-03
Output is +5 Vdc @ 1 A
                 +12 Vdc @ 0.75 A

Tried the aluminum foil trick- no help
My solution:
Connect the Motorola Modem directly to my Computers
internal power supply.
Chunk the old power supply back into its box.

My Motorola modem was not the problem.
The cheap made in Taiwan switching power supply was.

From: Phil (ON4BAW) <on4baw@pandora.be>

> Could you email me the exact pin layout and how to connect my computers PS
> to the 5-din socket of the Motorola.
> It would be very appriciated !!
>
> ON4BAW, Phil

Hello Phil & others,

You will need to find a suitable DIN connector unless you want to chop the old one off and later explain that to the cable company.

You will need to connect 3 wires.
Each computer is different but you should have some white four conducter plugs not connected inside your computer that are intended for connection to optional later added units such as floppy drives, tape drives etc. Determine the pins that have the voltage you need.

Holding the DIN plug (one you need to buy or chop off) which is male so the pins are oriented up and the indent is down (6 o'clock position)

The following pinout applies.(I reverified prior to writing)

```
                 9 o'clock pin is   +  5 Vdc
      next 10' o'clock pin is   +12 Vdc
and the   3 o'clock  pin is   GND
( 12 and 1 o'clock not used)
```

Also found the shell shield is not connected (did not connect mine)

Solder the pins up and find a way to route the cable out of your computer.
Another person responding to an earlier post of mine simply went to an available serial plug on the rear of the computer and made the connections there. Can't give details on this.

BTW my interference (80 mtrs) was intermittent data bursts that coincided with the data going through my modem. Even when the computer was unattended and even turned off . I pulled the modem out prior to writing this and listened on 75/80 mtrs. The hash was still evident with nothing even connected to it except of course the wall receptacle. TOTAL JUNK !

Hope this helps you and 73's
Eddie Bryant

I am cleaning out the Shack. I am open to trades and offers.
Things I'm interested in (but not limited to): Shortwave radios, Scanners,
VHF SSB Gear, HF Gear.

Kenwood TS-520 HF Radio
Cobra 142GTL Base CB
HTX - 202 2m Handheld
Utica 650 6m AM tube rig w/ VFO
HR-2600 10m Rig (Need alignment)
Antronn 99 10m/11m Vertical (w/ Ground Plane Elements)
Diamond X-300 2m/440 Dual Band Vertical (w/ Ground Plane Elements)
Moonraker 10m/11m 4 element Quagi (Switchable from horizontal to vertical polarization)
Astron 70 Amp Metered Power Supply
Astron 25 Amp Metered Power Supply
Mirage 2m 160w Amplifier
Texas Star 500 10m/11m Amplifier four-transistor Amp (Needs Work)
120 watts Home- Built 10m/11m two-transistor Amp
Radio Shack Pro-64 Handheld Scanner
Bearcat 760xlt mobile

Turner Plus 3B Desk Mic
Turner Plus SuperSidekick
Kenwood MC-50 Desk Mic
PDC-700 Power Scanner 10m/11m (SWR,Mod,Power)
NDS TA-27 RF Pre-Amp w/ Variable Gain
Citizens Band Field Strength Meter
Regency HX 650 Scanner (Crystal Type)
R-390A/URR Military HF Receiver (GREAT! Condition)
RG-8,RG-8, and more RG-8

This is the Radio Equipment I am parting with:) All Equipment is in great shape. If anything here interests you let me know.

Victor V.

I have the following for sale. Both in perfect working and cosmetic shape.
Icom IC-R10 with box, manual, rechangeable batts, charger & antenna
Optoelectronics Scout Model 40 with reaction tune cable (for R10) , soft case and DB32 antenna
All boxes and manuals included
Photos upon request
Asking $500.00 shipped

I would consider trades for nice color laptop with CD rom and fast processor

Paypal or POSTAL MO

G'day guys. I have just made a new ham radio website. I need a bit of a hand from you guys.

If it is possible, could i trouble you to go visit my site (http://www.aussiehamradio.cjb.net) and email me your website and any other useful links you have and I will stick them on there. Also, if you want you can post your antenna designs or whatever and I will stick them up as well.

Also, I am offering subdomains off my address. Eg.
www.YOURCALL.aussiehamradio.cjb.net
all ya need to do is email me with your callsign and web url and I'll set up an automatic re-direction.

anyway, Ill leave you guys to it now.

'73's Lach.

news:AViS5.1103$El3.13488@open-news.pacbell.net...
I have a Yaesu FT-530 (early model) and I modified it to expanded receive
and it has worked great all these years.

My lithium battery recently apparently failed and its memory was messed up
(I've been meaning to change that battery :), so I was forced to reset the
radio by holding MR & VFO while turning on the radio. I wasn't getting
expanded receive anymore so I then held the Up & Down arrows while turning
on the radio to re-enable the mod (I believe that is how it was done) but I
cannot get expanded receive anymore!

Why isn't it working? What am I doing wrong?

Well, I now know about 12 letters, but I need to think a moment or two about what I just heard before deciding which letter it was. This is undoubtedly the most god-awful boring thing I've ever undertaken, even beyond counting the holes in the acoustical ceiling tiles of my hospital room. I think it would be easier if there weren't any distractions (like life). I thought if I was imprisoned in a cell of a foreign prison, I could possibly get into this. It is difficult to imagine that anyone was ever so desperate as to create this thing called code as a mental exercise. There. I've said it and I know you all don't care at all, but it made me feel better to vent some of my frustration and for that I say thanks.   Johnny

Hi and thanks for reading this post

I recently acquired a General Electric 40ch CB radio Model A3-5825B (twin board model) with the view of putting it on 10m.

Has anyone got the schematic diagram for this radio as I don't have one and the rig has been tampered with by someone. Currently the lights come on but there is no-one at home (no RX/TX). It appears that components have been added and subtracted but I don't know what the correct ones should be.

Any help would be appreciated. Scanned schematics are OK but please email me direct and don't forget to remove the SPAMJAM

Thanks in advance

Not only does (may) it create problems with our frequencies, more
likely, it will create problems such as "bad picture" with THEIR
frequencies and they will soon be out to check as THEIR customers will
be the ones with the peeves.

Also, usually they use very well shielded cables for this type of run
and you are very lucky if you get a "direct" optical fiber run into your
home which would cause no bleed at all.

In my area, we are two blocks from where the optical "downloads" to RF.

Paul

For Sale: Icom IC-2GAT 2 Meter Handheld Transceiver with 7 watt transmit power (using standard battery pack)
Age: Approx 10 years
Condition: Good, some blemishes primarily on rear of unit, LCD is in good shape, some scratches (minor on top and front).
Use: Occasional in its early life, lately it's been collecting dust, no usage at all.
Includes: 2 battery packs (one standard, one high capacity), stock antenna, 12VDC adapter (takes place of battery pack for external 12VDC power source), Radio Shack Lapel microphone.
Paid: Approx $300 new
Asking: $125 plus UPS COD shipping or pre-paid, either way US Postal Service Money Order only!
Options: If you're interested in using this radio for a portable packet station, I have a Kantronics KPC-3 TNC that I used with it successfully for quite some time. I would include the appropriate tested cabling for interfacing the handheld with the TNC. You're on your own for software and serial connections to computer or dumb terminal. Total package would be $200 plus shipping UPS COD or pre-paid, either way US Postal Service Money Order Only!

Reason for Sale: Replaced with Yaesu VX5R, collecting dust!
If inquiring, please reply to halligan@mediaone.net

Thanks for reading.

I have Cox cable. Bought the modem/install package at Comp-USA where I phoned Cox and they installed the next morning at 8am! I was very surprised and pleased.

I have the SURFboard by Motorola and no problems yet with RF noise.

BTW if you plan on networking your in house PC's I just bought a pair of Intel "AnyPoint" home networks which use existing single line phone wiring in house for LAN.....works great but had a little trouble installing

```
software.

Bob Acord wrote:

> I'm getting all my Ham gear out of storage and trying to set up my shack. I don't have my outside antenna up yet, just using a short piece of wire. I do have a dummy load for the Xmitter. This is the first time I've used my Ham gear near a computer. (10 ft) I get a terrible 60 Hz hum at different frequencies across the different bands. On 40 Meters, I get very bad hum at 7.1 Mhz , 7.15, 7.2, 7.25. When I turn off my monitor, it goes away. I've tried 2 different recievers with the same result. I have a second computer in the same room and it causes a little interference, but nothing like the other one.
> This is a 17" Panasonic, about 2 years old that works perfectly. I'm hoping that when my antenna is up, the shielded cable will help with the hum. What do I do if it doesn't? I haven't a clue how to start to trouble-shoot this problem.
>
> TIA
>
> Bob Acord
> WD0DLS

Hi Bob,

Hope you've got the antenna up by now --- and what the other guys suggest is good.

If not, try what they call mu-metal shielding. Wrap your mon with aluminum foil and then ground it. If this doesn't stop it, then wrap a second layer with steel (or copper, or brass or some other metal) and ground it. I'm not sure if it works better if you insulate between metals or not - try both ways. Cloth makes a good insulator for this. Try a third "shield" of a dissimilar metal (and ground it) if the first two don't work.

I am an electric guitarist and I had my TV monitor atop a 4 x 12" speaker cabinet and the magnets were pulling away at the 19" color TV I had sitting atop my Marshall cabinet. I put about a four layer, bended roofing tin between the two and it solved my problem. I didn't even have to ground that!

This is a great trick that many have used for sooo long. Just gald to pass it along.

My e-mail is hidden due to SPAM so if you (or anyone but the SPAMMERS) want to mail me directly, just take out the SPAM letters below.

>other service (except for NPL's MSF time service in the UK, which uses a
>different modulation scheme).

For DCF-77 (77.5 KHz), which uses the same modulation (although I think with fewer dB of reduction), special ICs exist that do everything with only a ceramic resonator and an antenna (ferrite rod) attached. Serial digital stream comes out of it, ready to be decoded by a resident program.

This can be found in the $10 alarm clocks I mentioned.

Can't you find something similar in the US?

Rob

It looks like most of the WWVB radio clocks, in fact, use 60KHz modules from - or copied from - Germany's Juergans. Some of them do not work well here in Florida, though, because of the distance to Fort Collins, Colorado, the transmitter location. For our office, I built a 60KHz oscillator, driven by a PC that produces the timecode, to keep a wall of radio clocks in sync and on time.

Our club has done a "Hams on Ice" several times.... set up an Ice Shanty HF station.. we used an old aluminum ladder for a tower (froze it in the ice), mounted simple antennas, and offered a special QSL card for contacts.... lotsa fun!

We also do a MAJOR XMAS party... for years, at a local restaurant, it's grown so large that we now rent a hall (overall, comes to about $18 a head)

Also, you might want to try a 'mini-meeting' every weekend at a member's home (rotated of course on a volunteer basis).... we did that for years, held VE testing there too, but we now meet at a local Salvation Army HQ (Club has several members in 'SATERN').

We keep regular meetings fun with a "fox hunt" beforehand, door prizes, a 50-50 drawing, a "Junque" table where 'free' stuff is offered, etc.... not to mention Coffee, Pop & Donuts!
Maybe that's why we have over 250 Members and still growing! (took 3rd Place, Field Day 2000!)

Still looking for the 'perfect' trade on this! Thanks to all who have made offers! I am still considering them!!

Greetings! Up for grabs is an immaculate (I mean TRULY immaculate) Kenwood TS-850SAT. This one didn't look any better when it came out of the box from the factory! I cannot find a scratch, fault, or blemish anywhere on this rig! If you are a Kenwood fan, you already know the features of this competition class, world renowned transceiver! And this one is LOADED with the YK-88C-1 filter, the YG-455C-1 CW Crystal Filter, the VRU-2 Digital Voice Recorder unit, the VS-2 Voice Synthesizer Unit, and the Kenwood IF-232C Computer Interface with all cabling! Also includes the original stock microphone and box in MINT condition! Only thing that shows any wear on this outfit is the manual, and it's not in bad shape at all...schematics included. If you can find a cleaner TS-850SAT out there anywhere, I'll eat my shorts, Hi Hi!!! I would prefer someone within driving/meeting distance on this one, so you can appreciate the true beauty of this one! For those of you not familiar, the Kenwood TS-850SAT is called by many one of the best HF rigs ever manufactured! It CERTAINLY has one of the best receivers of any rig! Includes 160-10 meters (WARC included) with general coverage receiver. Features a great automatic antenna tuner, dual VFO's, dual NB, slope tuning, adjustable AGC, memory 'channels', I could go on and on...look at the product reviews section on www.eham.net for further comments on this great rig! I am really looking to trade this rig...would like at least a KW amplifier with a lower-end rig...something along the lines of an SB-220 in excellent condition with an older rig would suffice. I'll listen to any and all offers. Don't be afraid to bounce an idea off of me! I would also prefer that the deal be completed in person. Anyone in the Chicago or Rockford, IL area interested? How about the Madison or Milwaukee, WI area? E-mail me with any and all offers! Sorry for the length of this post! I don't usually get this wordy but this one's a true beauty! 73 es gud dx de N9LXX~~~ R. Blaine Fox Beloit, WI

For Sale: Icom IC-2GAT 2 Meter Handheld Transceiver with 7 watt transmit power (using standard battery pack)
Age: Approx 10 years
Condition: Good, some blemishes primarily on rear of unit, LCD is in good shape, some scratches (minor on top and front).
Use: Occasional in its early life, lately it's been collecting dust, no usage at all.
Includes: 2 battery packs (one standard, one high capacity), stock antenna, 12VDC adapter (takes place of battery pack for external 12VDC power source), Radio Shack Lapel microphone.
Paid: Approx $300 new
Asking: $125 plus UPS COD shipping Postal Money Order only!
Options: If you're interested in using this radio for a portable packet station, I have a Kantronics KPC-3 TNC that I used with it successfully for quite some time. I would include the appropriate tested cabling for interfacing the handheld with the TNC. You're on your own for software and serial connections to computer or dumb terminal. Total package would be $200 plus shipping. Paypal or UPS COD Postal Money Order Only!
Reason for Sale: Replaced with Yaesu VX5R, collecting dust!
If inquiring, please reply to halligan@mediaone.net
Thanks for reading

Dodge,
I've tried them all over the years either as part of a contest
group or at home, work with the laws of physics, ignore
the hype and get a Butternut, I've had an HF6V for 10 years
and can tell you that I've yet to find a vertical to compare with
it... please dont be taken in by "elevated feed" , "no radials"
"low loss traps", blah blah blah, have a look at the Bencher
website (they now own Butternut). I don't have any connection
with the company and I'm just a humber Radio Amateur who has
learned by experience. Bung up a Butternut vertical, put down
as much wire or mesh on or under the ground and work the

stuff the C******, Hy***** etc can't.

Greetings!

I am upgrading to an SB-220 and am offering up my ol' SB-201 for sale or trade. Amp needs work. It was working fine and putting out 650 watts when something 'popped' last week towards the bottom of the amp and she stopped working. Still showing 2,100 on the HV meter, and I think the tubes are still good. I truly believe it is a simple problem for someone more adept than me. I haven't even taken the cover off and looked. I would prefer a local pickup or will deliver within a reasonable distance for a decent offer. Would take older HF gear in trade or sell for ??? This one has been modified for 10 meter operation. E-mail me with any offers, whether trade or cash.

73~~~

Greetings!

Up for grabs now is an Icom IC-PS15 Power Supply. Has worked perfectly with every Icom rig I've ever owned...most recently the IC-746. Supply is probably an 8.5 cosmetically and a 10 electrically. Will entertain any and all trade or cash offers. PayPal still accepted (and preferred) by me!

73, es gud dx de N9LXX~~~

Hi

As a SWL, have been looking for a good headset. Must be confortable to use and with a good audio response around 4 kHz. My equipment is a Kenwood. Has anyone tried the one Warren Gregoire offers?

Thanks

Jose Luiz

Can anyone tell me for sure which pins on acc jack on the IC-746 to
short for a foot switch. Manual seems confusing to me.

Yesterday I started putting my 10 meter DiPole up, I want to switch the cable by hand as my Dipoles are easily accesible, so I cut my RG-8 in a convenient spot, Soldered two PL-259's in and connected them again with a coupler. I am putting my 10M DiPole in place and whenever I want to work 10 meters will go out and unscrew on of the PL-259's and screw it int the DiPole.

For some reason after I installed the two PL-259's when I transmit I get interference on my computer screen, I did not have this before, and since I mainly work PSK31 this is annoying....... Anybody a clue why this happened, all my connectors are tightly screwed everywhere.......

It does not really seem to affect performance as I worked Argentina on PSK right afterwards.

Did I not solder Coaxial outer braid to the PL-259's properly? Could that be it??

Any help is appreciated.

Thanks!

I really do not want a CB antenna but I would like to purchase a used (or new) Corvette Buddy Antenna System. It is a bracket the goes on the license plate on the C5 Corvette. I should be able to then find a dual-band (VHF/UHF) ham stick.

Dick, KD5VU
2001 C5 Corvette Coupe

I have a Tucker (out of business) dual band thru-the-glass antenna that
I would like to reintstall on a new car. Anyone know where you can get
the reinstall kits?

Dick, KD5VU

ps: I think Radio Shack now carries an antenna like the Tucker but they
did not have re-install kits in the store.

Hello, I am a very new OM and I tested RTTY reception. It looks good but I would like to operate from a sailing boat far away from coasts and mobile phone coverages.
I would like to maintain communications with my family and be able to send and receive emails with my HF transceiver.
Is there an Internet Service Provider by HF instead of phone lines or LAN or cable ?
Thanks for any information.

Umm.. It depends on what you're looking for..
If you're just wanting to study for the tests (which's all most of those 'study guides' do), there's MANY different options available online..
My favorite's Ham University, btw...

Hi,

Has anyone successfully communicated with their VC-H1 via the COM port on it? According to the manual (p 17-18), it is possible to connect a computer to it via the serial port and then remote control becomes possible. Kenwood provides pinouts for the COM port in a file called connectors.pdf that is available for download at www.kenwood.net.

Using the Kenwood document, I constructed a cable to connect my VC-H1 to my computer. I set the communications parameters as specified on p. 17 of the user manual (9600,8,1,no parity). Other than turning on the LCD screen on the VC-H1, I am not able to get any response from the camera when sending any of the commands listed on p. 18 of the manual to the camera from a terminal emulator. I've tried uppercase and lowercase and varying the communications parameters, but to no avail.

I've also talked to Kenwood support in California and they don't seem to have a clue. Their support person still hasn't called me back as promised after 48 hours have gone by. Unfortunately, I don't speak Japanese or I'd call the company in Japan and cut the fools in California out of the loop.

I may bid on a Johnson UHF 2 Channel Transceiver Radio Model# PPL 6000
currently programed for 464.700 and 469.152. Is anyone familiar with this
radio? Any idea if it can be modified for the 70cm band?

I just got a new Eagle. I'm in the process of putting it together. I did a
lot of research before deciding on the Eagle. I will say that the
instructions are not very "user friendly".
Weather permitting, I should have it up this weekend.

I need some help. I am doing a project and I need to put together two 1/4 wave groundplane antennas for 2m. I am using aluminum ground wire for the radials and I have made the radiators out of wire coat hangers. I am having trouble soldering the wire coat hangers to the SO-239 connector. The solder I am using doesn't seem to stay put.

What type of solder and soldering iron should I be using to attach the wire hanger to the SO-239 connector?

What about mounting 'em with a hose-clamp (or whatever) and then soldering?
Or not soldering at all?... My antennas were all built without any...
Or you could get a good welder to do it for you, I guess..
Solder just wasn't meant for such strength.. And, yes, I also learned the
hard way.

Ummm... not possible, coat hangers are made from steel or other ferris
metal, to solder (using electrical solder) the materials to be joined
must be copper based. If you have a very hot iron then you can solder
aluminium to aluminium but using amateur equipment it's not possible
to solder ferris / aluminium / nonferris metals together.

I suggest the aerial element be made out of large gauge copper wire
and the ground plane be screwed to the aerial.

Mike

I'm afraid I have to vehemently disagree. You can solder steel, aluminum, copper, and about any other metal. It becomes a question as to the amount of heat required.

Cars used to be repaired by applying "solder" to the bodies. This goes back to "before Bondo".

He is probably trying to use a soldering pencil which does not generate enough heat. A soldering gun would get it done.

Except that it would still be very brittle without some sort of
clamp/whatever to hold it all together.. "soldering" pieces metal, with
overlapping areas, to each other's a bit different than trying to keep rods
from breaking loose from each other...

I appretiate the replies - one reply I got from the AOL ham radio message
boards was to use a 5 - 200 watt iron, some past flux and large diameter
solder...

This antenna project of mine is starting to look like too much trouble... :)

Hmm... What about soldering a copper wire to the connector and then clamping
that to the wire-hanger? ;)

You may have altered the length of the feed line because it was not properly terminated at the other end and now you have created a SWR which is making the line radiate sugest making the exact same length of cable so you will have your match back because your line is being used as a matching section for the miss match of the antenna Signed. Well, after getting several replies, it looks like making these 1/4 wave antennas is more trouble than it's worth.. I think I'll have to scrap the phased array antenna idea and just make another 5 ele yagi to place

vertical....

I have a TH22E for sale or if anyone can get me 2 handheld cb radios for it
I would be pleased. They should at least be at 4W
The TH22E is fully functional and looks like new. Almost never used it.
The reason for selling is that I already have 3 TH22E's and I realy dont
need more.. =)
If your'e interested, please send me an email
27mhz@swipnet.se

73, Magnus

Not only that, he's not the listed owner of that phone number. It belongs to:

Vicente H Orosco

1001 S Belle Ave
CORONA, CA 91719
Phone: (909) 279-4193

????????????????????????

Sounds like CB junk though MIRAGE is a known name but I don't think they made amps like he describes.

Took me about 20 minutes.
```

Crimped solderless connectors, with eyelets, on the radials and bolted them to the SO-239 flange. Soldered the vertical to the centre connector (used a 300 Watt gun). Made a loop at the top of the active element and tied a cord to it for hanging.

One of these has been in my attic for over 20 years and still works fine - used it today. Not as good as the Ringo or the beam but still works pretty good.

I used one as a test antenna on a repeater site and it stood up surprisingly well to the weather for a few weeks.

I have two more - I made them one evening as a demonstration during a basic HAM radio course. One for UHF HAM and one for UHF Military A/G/A.

They are really easy to make with copper house wire - 14AWG fits the centre connector nicely.

Have also done it with brass rod.

Any idea how the 14 gauge stands up to wind? The antennas will be outside, so
they have to be sturdy enough to stand the ocean breezes...

Except that each thread ended when I proved the person to be wrong..
Go to the end of each and quote that instead of being the sore-looser you are...

And for anyone who has no idea what I'm refering to, I'll include the end of our little spat where I proved you wrong and you then resorted to name-calling.. Ok, glenn?
It's appended to the end of this post..

Of course, rather than continue debate (which would be pretty hard to do now), you'll resort to more name-calling...
It's like most chess players.. You were pretty good till it came to the end game...

I knew you couldn't continue the argument, but that you wouldn't ADMIT
defeat...
"poking the dog"... Yeah... I guess that's the best one can get from the
looser nowdays...

Re-read my reply to you and show how what you said is correct.. OK?
You weren't "prodding the dog.." You thought you were winning the argument.

I have created two databases - one allows you to enter your availablity information for things such as 2m SSB contacts, or if you just want to find others to talk to on your local repeater or simplex frequency.

The second database is for people to enter information on local 2m FM nets. These can be on repeater or simplex frequencies. Please add information on all of your local nets including rag chewing nets, ARES nets, Red Cross nets, etc...

Both of these can be reached by visiting
http://www.egroups.com/database/2mallmode

Hi Guys.

Ive been away for a while now regarding operating radios and trying to catch some skip. Ive been a radio engineer for roughly 9 years. Just wondering if anyone can fill me in on how to obtain a full licence to operate a ham radio.

info on. --> exams?
info on--> exemptions?
info on--> morse code in australia??

thanks in advance

please post here or feel free to email me .

ezypezy@ureach.com

thank you

Hello there

I recently bought a DeltaForce Magnum...
(http://www.syncroelec.com.au/VC.pl?V=DeltaForce)

I am now looking for some frequency listings above the 27mhz band.. or below
it. (not include NZ/international/marine).

What I'm after is either a) call channels or
                                   b) repeaters (FM preferrably)

Thanks

Stephen

From my experience using one to check out a potential repeater site they
seem to stand up to 'breezes' pretty well. I would not expect them to
survive too much 'wind', especially if there was some freezing rain
around.

I would hesitate to put them outdoors except as a temporary
installation, but I don't really have any practical results to back up
that opinion.

Certainly it would be possible to build a much more rugged version with
a little more time and effort - I seem to recall having seen several
such designs published over the years.

```

I have a Icom Q7A (Miniature 2m/440 HT) Iwas wondering if anybody knew of a way to program this via a PC. I know that Icom does not officially have anything, but I figured somebody out there has come up with something, especially since the Q7A has the plug on the top of the radio.

Any help is appreciated.

THANKS

-Peter

I need a schematic for a Yaesu FT-101B. I'm going to convert it over to 6146B finals based on the QST from May 1999. Send me an email, let me know if you can or will fax, scan and email a jpg or whatever. Anyone have an old manual or copy of one lose? Will pay for copy.

Thanks!
N0DGN

I was wondering if anyone had the instructions on how to convert a CB swr meter
to 2 meters..
I saw this in 73 or one of those mags a few years ago, but cant find any info
on it now..
I have an old Micronta that I would like to convert..

Thanks!
Steve

The Thames Valley Repeater Group has a new website at www.tvrg.org.uk

The group operates four repeaters in the Thames Valley area, GB3AW, GB3BK, GB3BN and GB3BN.

GB3BN the Bracknell UHF repeater is in the process of moving to a new location which is expected to be complete around Christmas time. Please visit the webpage for all the latest news on the move.

All comments on the website style and content are most welcome.

I'm getting back on the air after a five year hiatus.
And given my property, I think a multi-band vertical might work best.

Can anyone compare results with:

Butternut
Cushcraft R6000
Hy-gain Patriot

Should I be looking at others?

How about QRN, given that they're vertical.

How about QRM?

Are the claims by Cushcraft and Hy-gain that their antennas work well
without radials true?

One other question: Can you bury a co-ax feedline? Do you need to pipe
it?

Many thanks.

Interesting way you talk in circles BD, even for a small child your 'dude' crap falls short.......... See if you can understand this, other wise, maybe YOU need to go back over your old posts to refresh your weak memory............ The fact is that there never was a 30 WPM requirement and no matter how much you try to twist and alter the subject, the fact remains the same.

Hi Dodge,

Have you thought about the MFJ 1798 vertical.
```

I used a Cushcraft and Hustler verticals but they did not comp[are to the MFJ.
I also compared it to my Cushcraft A4 Beam and is is so close on the receiving and sending that I disposed of the beam.

Bob Pursel N6IZE

I have updated FCC Enforcement website in order kick off a campaign to get a jammer hotline installed at the FCC.   With the coming change in administrations it is an ideal time to go for the jugular.   With all our great activist folks out there plus our communications ability it should be fun to charge ahead.   I've been receiving e-mail and phone calls from all

over the country from people who have taken action.
Keep up the work.

The "atomic" clock you can buy at radio Shack reads one of the LF WWV
transmissions and decodes the time info imbedded in it to keep itself
corrected.

Anybody written sound board software to extract this time signal from
the output of a radio tuned to that same WWV freq?

Sure would be nice to have an "atomic" clock in the PC.

If you have an internet connection you can set your PC clock from NIST directly. I use NISTIME-32BIT.EXE to automatically reset the clock once per day on one of my PC's that runs a sensing application and has poor timekeeping. You can get software from;

http://www.boulder.nist.gov/timefreq/

To just display the time with a geochron style graphic;

http://www.time.gov/

AFAICT, they (including P29) are all considered as "oceania" for a
continent, so should be 1 point. There is a DXCC list showing
zones and continents at http://www.arrl.org/awards/dxcc/dxcclist.txt.

Howdy,

Have a peek at ID Wizard. It will sync your pc clock and more:
http://www.taborsoft.com/softstuff/idwiz/

Regards,
Jim

What radio are you talking about? You would need a radio and antenna that
work at 60 kHz, and convert the modulation used on the WWVB signal to an
audio tone in order to feed it into a PC soundcard. At that point, all
you'd need is software. But is there a suitable radio for this?

Dave

Go to www.ananlogx.com and look under network tools. There is a program called atomic timesync. set it and forget it.

I have an ICOM PCR-1000 receiver already hooked up to the PC and the audio is already fed into this PC's soundcard.

I think lots of guys would use the software. If a receiver were not already available, it should be pretty easy for homebrewers to cannibalize one of the existing cheap clocks to get the receiver and feed its output to the computer sound card.

C'mon, somebody, write it. Let it operate under Windows and let it set the PC's clock automatically and then reset it periodically. I am stupid, or I would do it myself.

I was trying to do a meteor scatter packet radio operation during the Leonids last week, in which I broadcast my packets during a prescribed 15 seconds of every minute (see http://go.to/BEACONet). My PC clock kept drifting so much I wandered out of my time frame after only a few hours. Lots of other applications for a precise clock in CW meteor scatter calling, etc, also.

The time signals are there, so why not be using them???

Here's the correct URL:
```

http://www.analogx.com/contents/download/network.htm

You had an extra "n" in your URL.

Why do you want to use a soundcard?

Here in Europe the transmitter of choice is DCF-77, and many household clocks for it exist. They can be bought for prices starting at the equivalent of US$ 10..15 (for a battery-powered alarm clock)

The output of the receiver section already is a digital signal.
So instead of feeding this into a soundcard, one connects it to some spare input (usually a status signal on the RS232 port).

Several programs exist to sync the PC time using this setup.

Who would want to tie up an expensive receiver for this?

Rob

Doesn't CHU (3330 kHz, 7335 kHz, and 14670 kHz, Ottawa?) transmit time standard data as Bell 103 standard FSK on AM? There are lots of hardware

construction articles and software out there to easily decode this data
stream.

Nowadays, people also use GPS sattelite signals for time standards as well.
I believe there are sync error tables published on WWVs web pages somewhere.

Ok. Does the PCR-1000 tune down to 60 kHz? When you tune there,
what does the signal output look like? The PCR-1000 has a number of
demodulators available (FM, WFM, AM, SSB, CW..) but the WWVB signal
almost certainly doesn't use any of those modulation schemes. Does
the PCR-1000 give a decodable signal out anyway in any of those modes?
And, if so, is the signal actually an audio signal that can be digitized
successfully by a sound card, with its limited frequency response?
These are the kind of details that determine whether this is possible
or not.

>C'mon, somebody, write it. Let it operate under Windows and let it
>set the PC's clock automatically and then reset it periodically. I am
>stupid, or I would do it myself.

There's another possibility, too: just about any board-type GPS receiver
outputs the current time and a pulse each second, accurate to a microsecond
or so. This can be used to keep a PC clock quite accurate, and there's
software available for this. If you only want accuracy to the nearest
second or two, any handheld GPS receiver with NMEA output will do.
See www.tapr.org for suitable hardware and software.

Dave

Hi Thanks for reading my urgent post,

I just entered my paper log onto the pc using genlog software,the point
allocation is auto,and questionable as a P29 scored 3 points but ;
V73
V63
FK8
ZL
KH2
KH6
KH8
FO
DXI
KH4
PM8
3D2
all scored 1 point each ,
from what i read in the rules all other contacts outside my continent score
3 points each,so can someone please let me what is considered to be within
my continent,
i believe most of the contacts above should be 3 pointers any comments ,
i've just spent the last 6 hours at the pc ,not going to bed yet (3:50am)
will check for a response after next coffee,
thanks for your help,
Paul,,,,,vk3ddu

now i'm in vk land

Try out 'Chameleon Clock'...it is by far the best software app for accurate timekeeping I've ever seen...plus it is fully customizable and it looks good too!

www.chameleonclock.com

Looks like that is for computers on the internet. the computer I am
using for the ham stuff is not on the internet. I already knew about
the internet time service. Thanks anyway.

Greetings!

Up for grabs is an immaculate (I mean TRULY immaculate) Kenwood TS-850SAT. This one didn't look any better when it came out of the box from the factory! I cannot find a scratch, fault, or blemish anywhere on this rig! If you are a Kenwood fan, you already know the features of this competition class, world renowned transceiver! And this one is LOADED with the YK-88C-1 filter, the YG-455C-1 CW Crystal Filter, the VRU-2 Digital Voice Recorder unit, the VS-2 Voice Synthesizer Unit, and the Kenwood IF-232C Computer Interface with all cabling! Also includes the original stock microphone and box in MINT condition! Only thing that shows any wear on this outfit is the manual, and it's not in bad shape at all...schematics included. If you can find a cleaner TS-850SAT out there anywhere, I'll eat my shorts, Hi Hi!!! I would prefer someone within driving/meeting distance on this one, so you can appreciate the true beauty of this one!

For those of you not familiar, the Kenwood TS-850SAT is called by many one of the best HF rigs ever manufactured! It CERTAINLY has one of the best receivers of any rig! Includes 160-10 meters (WARC included) with general coverage receiver. Features a great automatic antenna tuner, dual VFO's, dual NB, slope tuning, adjustable AGC, memory 'channels', I could go on and on...look at the product reviews section on www.eham.net for further comments on this great rig!

I am really looking to trade this rig...would like at least a KW amplifier with a lower-end rig...something along the lines of an SB-220 in excellent condition with an older rig would suffice. I'll listen to any and all offers. Don't be afraid to bounce an idea off of me! I would also prefer that the deal be completed in person. Anyone in the Chicago or Rockford, IL area interested? How about the Madison or Milwaukee, WI area? E-mail me with any and all offers!

Sorry for the length of this post! I don't usually get this wordy but this one's a true beauty!

I'm interested in the same issue... there was a review in QST a few years
ago that praised the Cuchcraft R7000, but found the MFJ 1796 very hard to
tune. But they haven't done a head-to-head comparison on the newer
groundless verticals... Cushcraft R8 and HyGain Patriot.

Anybody know of a place to find a real comparison? At $350 I don't want to
make a bad decision!

Is there anybody that can tell me on what 10 meter frequency the PSK31 action is. I know all about 20 meter PSK31, but I am cutting my 10 meter Dipole and would like to cut it close to the 10 meter PSK31 Freq.

Hope somebody can help!

Appreciate it!

Dave, the signal is at 60 KHz, and is modulated by a 10 dB reduction at
a rate of one bit per second.  You would need a frequency response down
to DC to use a sound card.

Is it safe to assume that you want this 3 band antenna for repeater work? If this is the case Diamond and Comet make very high quality antennas just for this purpose.
Good luck and have fun

I've got a General Instrument Surf Board, and it's quiet - I've unplugged it, and reconnected it to the mains, over and over, and I haven't heard a peep! I have had problems with my monitor, and with a couple of light dimmers in the house, but not a whisper from the cable modem. If you have the dosh to pay for it, I'd say do it now - you will wonder how the hell you dealt with snail - speed modems for so long!

Both WWV and WWVH broadcast time/date signals continuously on HF. Listen
to them using a receiver with decent low frequency audio output. That
low frequency tone (sorry I don't remember its frequency off hand) that
starts exactly on each second pulse and lasts for a fraction of a second
contains the code. The longer tones are 1s and the shorter ones are 0s.
These are the tones that the famous Heathkit Most Accurate Clock used.
Should be no problem at all to detect and decode them with a sound card.

I had a HY GAIN TH3JRS over for a short time and the guy who bought it is having a blast with it. He is happy as heck and will vouch for how good a SMALL tri Band beam. Good Choice cost vs. preformance.
Also try EHAM for reviews on antennas they have a great section for reviews written by hams for hams.

Hi, Cedric -

The central question for me is whether the claims that no radials are needed holds water.

Most of my reading says they do.

Sales people say, "Well, we sell a lot of these . . . " but don't tell you whether they work well.

Dodge

Hi,

I am trying to locate a Science of cambridge (Later to become sinclair) Mk14 computer. The computer was available in a home built kit in the UK and, from what i am led to believe, many were sold to amateur radio enthusiast, as, at this time they were the only people experimenting with electonics in the home build environment. (Hence my reason for posting in this group)

If you have one, or any spares, or indeed any sinclair items ie radios, calculators, watches, etc, working or otherwise, that you would like to sell please email me as i cannot regularly access newsgroups.

I would also possibly be interested in early home computers from the late 1970 to the late 1980s. Preferably boxed but all will be considered.

Thank you in advance.

david.oharrow@btinternet.com

Bye

A 60KHz receiver is possible, of course. One needs to detect the 1pps 10dB signal reductions of the WWVB carrier, then validate and decode the 60-bit word that results into time and date, then set the PC. A 60KHz receiver would likely be dedicated to that function alone since it wouldn't suit any other service (except for NPL's MSF time service in the UK, which uses a different modulation scheme).

Instead, I suggest that you consider decoding the modified IRIG-H code that WWV and WWVH transmit on a 100Hz subcarrier of 5, 10 and 15MHz. Most communications receivers will pass that audio and a sound board could certainly be used to decode it. Again, the data needs to be decoded and assembled into time and date before a machine could be set to it. Unless you are privileged to get a solid WWV signal, you'll have trouble with noise and fades, and you'll need to validate the data you think you've received.

I chose to do the 100Hz detection in hardware. I built a PLL-based 100Hz timecode regenerator for this purpose and I wrote a tool that accepts the 100Hz data via a parallel port pin. The program is called TakeIrig.com; it is supplied with the RighTime evaluation package at www.RighTime.com. A corresponding timecode generator program, MakeIrig.com, can be used to test your setup. These are both DOS-based tools; although they work under Win9x if the data can get to them, Win98 tends to commandeer the ports and often defeats successful use of TakeIrig.

Good luck.

Try a search for "atomtime.exe". This connected to an atomic clock

If this is the same as "morsematic", check
www.sarrio.com/sarrio/rsman1.html

also check www.w7fg.com if the MM1 manual might help.
Click 'catalog of manuals' then click on A (for AEA).

I am looking for some fun ideas for some outing activities that perhaps you have tried or participated in at your clubs. I am looking really for some new ways to get some old members of my local club back in and active as well as providing an opertunity to draw new hams in.

Thanks for you help.

I have 5 of the type M68729 class C (i.e. FM) 30 Watts out average, 40 Watts max. These will replace older M57774 module just fine. The input drive is 300 mW for 30 watts out. I am asking $50.00 including shipping

to conus for each of them them. RF parts wants around $70.00 for the same.
I will sell them all for $200, this is the equivalent of getting one for free.

These are brand new never been used and still have the one inch leads on them. I have 4 of them in a sealed rack and one loose.

Thank You,

Bryan Fields, KB9MCI

Howdy, folks.

You are invited to come visit http://hfradio.org - the Amateur Radio
and Shortwave Listeners Resource Center.

Here, you may sign up for Propagation eAlerts, check current conditions,
read the latest DX news, study and learn, check on Shortwave schedules,
and a whole lot more.

I look forward to your visit.  And perhaps we'll meet on the air, too.

73 de NW7US, Tomas

You are an interesting lot! Down under if the antenna does not suit the car ... we get a new car. Glass mount Antennas do work just not well! They are in essence a compromise. At 40mhz and above a 1/4 antenna properly installed on the roof will out perform any glass or mag mount.
Get used to the smell of a hot hole saw going through the paint, it grows on you!

Martin Orloski wrote:

> I've seen no perceptible difference between a 5/8 wave mag mount and the 1/2 wave through-the-glass antenna. I've had the latter for 3 years now and like it very well. I still have the mag mount as well and use it for rentals, etc.. I got them both at Radio Shack for reasonable cost and no longer get water inside the car at the car wash.

> > What's the best way to run an antenna cable from the roof of my car to the inside? Right now, I have the cable running through the door, between the frame of the car and the door. The door has a little but of padding, but I don't know how much that will help with protecting the cable. I checked out the cable after running it, and it seems OK, but I don't know how long it will hold up, even though I don't use that door that often. Is there a different way to run it, or should I use some sort of padding on it?

Greetings and thanks for reading,
Looking at the new r.s. catalog I noticed on page#85 there is a small
dual bander (their #19-1106). It seems to have the options that I
would require. I was wondering if anyone out there has tried one out
and has any comments good, bad or neutral that might help myself and
others determine if the radio is right for them and their area. Thanks
and have a nice day.
Regards
Ray Miller N2NJK

One thing I would do - that is to ask to try it at the store and have a few friends listening on 440 to make sure the thing is on frequency. A few years back, I purchased an HTX-404 from RS. Once on the air, the guys told me I was off frequency. I took it to a shop where I had previously worked (they do VHF/UHF/trunking radio). Yepper, I was 5 KHz high! I took the unit back and they gave me a new one (it was only a couple of days old). I got back on the air and - yep, off frequency. I checked with the shop and it was almost 4800 Hz high. Since the shop equipment is calibrated, and the hams gave me the same reports, I can only assume that RS does not tune the radios too closely. Also, check the specs. The HTX-404 claims stability only to 10 parts per million (meaning that 4,500 Hz off is in spec at 450 MHz! So I guess I was lucky they took the first unit back (although the second unit is the same). I've been using it since around 1995, however, with no problems (except for the lithium battery died). All the functions work and I have a good 8 mile range to repeaters from inside my car and a solid 15 miles outside the car (I can open 2 repeaters on Bristol mountian, probably 25 miles away, from my living room). My advice? Do an on-the-air check with it before you buy. Probably best check both 2 meters and 440 - but 440 will be the one to reveal if they still can't tune the things. Oh yes, I have permanently set the channels 5 KHz low on the HTX-404. It works.

Will sell very nice Ranger II for $500 plus shipping or will trade for cosmetically sweet Johnson Navigator plus cash or ???

Ranger II has been modified to operate SSB with the Heathkit SB-10 SSB Adapter. The mod does not affect the front panel in any way. The only visible mod is a pot and two small connectors on the rear apron of the chassis. The mod is easily "backed out" if you choose. Original manual included as well as the 1964 issue of CQ, detailing the modification.

Front panel is cosmetically a 9, and the cabinet is an 8+. Not many of these around in this nice condition! Tubes light and B+ is fine, but no power output. A cinch for most amateurs to have on the air in an hour or so. It was bought in 1963 by the previous owner who was the only owner until I bought it. Increasing job responsibilities and an impending divorce have shot my plans to put this old gal back on the air, so she has to go!

Photos will be emailed to serious inquiries only. First $500 or super clean Navigator plus cash takes it.

Please reply by email only: cosmos41@ix.netcom.com

Thanks!

I have one of those radios.

I have been somewhat displeased with it. The 2 meter performance is pretty good. The 70cm leaves something to be desired. It seems to have problems getting into the repeater reliably. It is very sensitive to EXACTLY which way you hold the antenna. I have not tried it on any other repeaters to see if it is a repeater problem.

The problems I had was that the antenna covering broke loose and was able to be pulled off of the antenna.

The unit also started to clip the audio while transmitting and receiveing. I had to send it out for repair.

This was within 6 weeks of purchasing it.

If I had to do it again I think I would pass on this radio.

Rec.radio.shortwave,rec.radio.amateur, and rec.radio.cb are not the appropriate newsgroups to post ads for your scanner equipment. Spamming your ads to all radio newsgroups reflects poor netcitizenship. Please monitor a newsgroup to learn what posts are appropriate before posting your ads in the future.

Thanks and hope to see you as an active and constructive participant in the newsgroups which you have chosen to post to. Building a good and vibrant newsgroup community ultimately depends on its participants.

Best regards.

Hallo allemaal,
Ik zoek voor een portofoon van ICOM type IC24 een subaudio module.
Het module heeft het typenummertje UT-50.
Wie o wie heeft er nog een voor mij in de aanbieding voor een zacht prijsje.

-----BEGIN PGP SIGNED MESSAGE-----
Hash: SHA1

This is for a non-amateur application, thus it is off-topic. However, there are no other applicable forums available to seek help in.

Background: Very busy paramedic system needs to find a way to bring the medical control box to the doctor in the ER. If any one remembers the TV show "Emergency!", then you will remember the doctor going to the console to speak with Johnny and Roy.

I need to put an HT or a cordless phone into the doctor's hands so they can speak with us without having to go to the console.

Our console is a General Devices Corp GEMS 2000 Series biotelemetry receiving station. We utilize tone-remote control for our UHF radio (the transmitter is 10 miles away, cellular or POTS telephone service, and tone-remote control VHF radio (the transmitter is on the roof of the hospital).

If we were using only radio or only telephone service, we would have no problems. However, we have to provide a high degree of redundency to ensure reliability of the system.

If we used only radio contact, we could utilize HT's in the ER for the doctors. They key up the radio and with a short voice delay, we could ensure that gets to the field.

If we used only telephone contact, we could give the doctors a cordless phone to walk around with.

Using both, we run into problems. If the ER docs use the cordless phone, and we contact using radio, there would have to be some sort of VOX system in place. If there is a lot of background noise, then the system would always be in transmit.

If the paramedic's use telephone, and the ER has HT's, then the same problem exists.

Question: Is there any suggestions from the group on how to work around this dillema?

Message was cross-posted to rec.radio.amateur and rec.radio.amateur.equipment - please follow-up in rec.radio.amateur.

Jase

HAMFEST October 29, 2000 - Lindenhurst, LI

GREAT SOUTH BAY AMATEUR RADIO CLUB
ARRL APPROVED LONG ISLAND HAMFEST - October 29, 2000

LINDENHURST, LI - NY

On October 29, 2000 the Great South Bay Amateur Radio Club will again sponsor an indoor Hamfest-Computer Show. The location will be at the:

Knights of Columbus
400 South Broadway, Lindenhurst, NY.
This is an ARRL approved Hamfest.

There will be radio equipment, electronic components, computers and accessories, software, books, technical manuals, ARRL information, Amateur Radio License Exams, Door Prizes.

Advanced registration is $15.00 each table. Tables at the door are $20.00 each. Contact Walter Wenzel KA2RGI at 631 957-0218 for table reservations. NO TABLES WILL BE RESERVED WITHOUT PRIOR PAYMENT due to the space available.

General admission is $ 6.00. Wife's and children under 12 admitted with no charge.

VE - ARRL - 12:00 NOON at Babylon Town Hall, 200 E Sunrise Hwy, Lindenhurst.

For exam candidates please remember to bring your original FCC Amateur
Radio license (if licensed), any C.S.C.E. forms that are pending, plus a
photocopy of each, pens, calculator, formal form of ID (preferably photo
ID),
and the examination fee, to the exam session. Current ARRL/VEC fee is $
6.65,
exact change is appreciated.

Talk-in will be via GSBARC Repeater on 146.685 -600 136.5 PL.

Food Service during the Hamfest will be provided by members of the Knights
of Columbus Council.

Information is also available during the GSBARC 2 meter info net every
Monday evening at 7:00 PM following the Newsline Report on the W2GSB
repeater, 146.685 -600 136.5 PL required. You may also write to:

Great South Bay ARC
P.O. Box 1356
West Babylon, NY 11704

E-mail GSBARC info@gsbarc.org or visit GSBARC online at
http://www.gsbarc.org/hamfest.htm

Well Mr. "EXPERT", never underestimate the power and will of the people. All you have to do is watch the various news medias. Your subject was mentioned on FOX. By the way, "analog" cellular phones are not obsolute yet, they are in the process of being replaced with digital.

Thank you for "YOUR" - "OPINION"

Registered Voter wrote:

> As a telecommunications expert there is something I have noticed but you may have not. House Representatives and Senators are taking advantage of your ignorance. Their arrogance and abuse of power should be a deciding factor to vote against them. I watched them sponsor and pass privacy laws that in reality does not add protection to your cell phone privacy. The privacy laws are a slap to your face and were designed to protect corrupt politicians cell phone privacy. They are dangerous because they are intruding into your liberties, freedoms, and rights. They are forcing consumer electronics sold to you, an American, to be butchered and restricted.
>
> Below is a summary of what I am talking about, since I had time to research lawmakers' actions. Remember to vote against the sponsors of the bills listed below. They were not concerned about you when making the privacy bills, they were concerned about themselves. Again these laws do not add any extra protection to your privacy, technically it can be proven they do not.
>
> Let us start at the beginning. A legislative proposal H.R.1964 was stopped that would have lead to the elimination of radio scanners, as well as the radio scanning receiver portions of commercial and amateur radio transceivers. The attempted sanctions came from Rep. Edward J. Markey (D-MA) in the 105th Congress. He forewarned that we would "see scanner sales drop precipitously" and tried to make his promise good. Fortunately for the citizens of the United States of America his attempt failed. Be forewarned there will be future attempts by others!
>
> President Clinton approved into law the Wireless Privacy Enhancement Act of 1998. It began as H.R.2369 in the 105th Congress. Members of the Subcommittee on Telecommunications, Trade, & Consumer Protection sponsored H.R.2369. This law forced radio scanners sold in America to have a radio band removed. It developed because of lobbying by the Cellular Telecommunications Industry Association (CTIA). The main reason for this law was the news stories about a citizen illegally (because of existing privacy

> laws) disclosing overheard wrongdoing of Congressman Newt Gingrich (obsolete
> analog) cell phone call. It resulted in him having to resign, something that
> a corrupt Congressperson or President would fear if caught.
>
> H.R.2369 was sponsored by 105th Congress House of Representatives:

> unrestricted radio scanners except the United States of America.
>
> Radio scanners are used to fight crime and for personal protection. Services
> can instantly be heard regarding emergencies, crimes, accidents, hazards,
> etc. This is the fastest way a citizen can get time critical information.
> Thus, citizens can better protect themselves and better assist Government.
> For volunteers and Government workers, the radio scanner hobby is used
> on-duty and off-duty to keep up with on their own services and as a
> mutual-aid tool for listening to surrounding services outside of their
> jurisdiction.
> Radio scanners are used by:
> Volunteer Firefighters -- who may hear news of an emergency before official
> notification.
> Police Officers -- to learn of potential emergencies.
> Wrecker Operators -- to learn of disabled vehicles.
> Journalists and Photographers -- to receive first notice of emergencies.
> Motorists -- who want to avoid accidents and know weather and road
> conditions.
> NASCAR Fans -- to monitor talk between drivers and pit crews.
> Consumers -- to learn of emergencies in their area.
>
> Radio scanners can serve a genuinely useful function in matters of local, or
> even national, emergency. As one manufacturer points out, when the nuclear
> power plant crisis occurred at Pennsylvania�s Three Mile Island, local
> authorities themselves bought hundreds of scanners. They supplied them to
> people living in the vicinity in order to keep them alerted to any important
> news or instructions.
>
> Radio scanners help save lives:

> For example an old news story, a St. Louis helicopter pilot listening on a scanner heard police describing a man holding onto a bridge above a river. Police worked with the helicopter pilot to save the man�s life.
>
> New digital communications is making radio scanners useless. Some people in Government have a desire for new digital modes to keep their public-service communications private from their own law-abiding citizens. Digital radio encryption (non-military use) by some departments of Federal Government and Government contractors became available in the late 1970's. Today it is much easier for secure Government communications with plug-in HIGH-LEVEL ENCRYPTION modules available only to Government and Government contractors for their radios and cell phones. More Local and State Governments and other departments of Federal Government are installing new digital radio systems closing it to law-abiding citizens. In addition, many Local and State Governments and Federal Government are using digital Nextel, digital cellular and digital PCS for privacy. Nextel private business radio system is more then a telephone. It is also a private 2-way radio for group communications used to police in secrecy. Reasons why we need new laws to re-open government radio communications.
> http://members.aol.com/truth4000/mpage.htm Openness of Government and Public-Safety Services old site
> http://www.openness.org/ Openness of Government and Public-Safety Services new site
>
> Congressional law is forcing FCC rules that prioritize cell phone callers and private radio networks. What does that mean to you? In a major emergency, the government will have priority cellular access over you. Thus, your cell phone will become totally useless when you need it the most during major events or major emergencies. In addition, Government has their Government radio networks built at great expense to the taxpayer. They can waste your tax money by using the other costly private radio networks (Nextel, cellular, PCS) when they can easily use their own efficient Government radio networks or cheaper wired telephones instead of wireless cell phones.
>
> The news media is a big user of radio scanners, used for most of their newsgathering. Government's use of digital and encryption during emergencies severely limits the news media and law-abiding citizens. With my own use of radio scanners the past Two decades, I was able to compare how quickly and accurately the news media reports information. They are can be slow to report it, sometimes deceptive and showing old information or will not report what you would consider as news. Overall they do a fair job reporting news but cannot report it all. That is why law-abiding citizens need useful radio scanners. It would be dreadful only getting news from a limited and controlled news media.
>
> In some States of America, such as Florida, State Governments have been making new laws to keep the news media away from certain police operations. News media helicopters have been ordered away by Federal Aviation Administration (FAA) air traffic controllers per police commanders at a police scene. It is information censorship. The police stay well protected without these laws. What you see Government really doing and what you hear Government really doing is slowly becoming illegal.

>
> The 106th Congress was trying for more restrictions with H.R.3489 (Sec. 5 and Sec. 6, formerly H.R.514) and S.2326. These similarly worded bills add bad restrictions by requiring the removal of the SMR and PCS radio band in radio scanners and attacks legitimate decoding. SMR is the Motorola iDEN (e.g. Nextel "Direct Connect") 2-way radios used not only by citizens but also by Government and is in the same radio band as other Government public-safety radio systems. Also, note that radio scanners do not effectively receive PCS because it is digital and very short-range microwave. Because of this, PCS requires micro-cells or many more cells compared to original 800 MHz cellular. In fact, Jay Kitchen, President, and CEO of the Personal Communications Industry Association (PCIA) said, "Quite naturally, therefore, some have called for more laws and more regulations. But certain pioneers in the wireless industry have found a technological alternative, one that offers the desired privacy without need for further federal government intervention. Enter digital personal communications services. Like a personal computer, PCS technology transforms spoken words into a complex binary algorithm of 1's and 0's, representing meaningless static to the "ears" of a scanner. In addition, there are infinite different combinations that PCS companies use for breaking up and reassembling the codes. This factor alone eliminates the casual hacker, but even if a determined eavesdropper attempted to intercept a PCS phone conversation, the sound they would pick up would be much like the squeaks and squeals that you hear when you log on to the internet or send a fax. Although nothing is absolute, it would take extremely sophisticated, expensive computers and devices, much like those used by the CIA and top law enforcement agencies, to possibly decode a PCS signal. Furthermore, in some PCS technologies, the coding scheme is changed from call to call, so even if a sophisticated eavesdropper was able to break one of the codes to intercept a call, he would be back to square one with the next call he targeted." Proof why H.R.3489 and S.2326 have unnecessary wording and are mostly ludicrous laws.

> Mr. Ron WYDEN (D-OR) - 3/29/2000
> Mr. Conrad R. Burns (R-MT) - 3/29/2000
>
> Key points:
> (1) A few other countries have restricted reception laws. Many of those countries greatly violate human rights.
> (2) Radio technology is going from analog to digital, which means easier encryption of public services and a need for laws to keep a more open Government communications for the listening Public. Government is supposed to be under an obligation to share information with the Public. Make new laws to force Government public services to provide law-abiding citizens the ability to monitor their new digital radio communications.
> (3) Foreigners and citizens of adjacent and other countries will have the freedom to own unrestricted scanners.
> (4) A Government employee or cellular company employee can buy an unrestricted radio scanner. American Government can eavesdrop on cell phone and digital phone conversations. FCC has provisions for Government to monitor cellular and Internet.
> (5) It is to the criminals disadvantage if law-abiding citizens can listen to Government radio communications and on the alert. In tactical operations they know about their target person or group and if they are using scanners, etc. Criminals will find radio scanners of no help to them. Radio scanning is more of science that takes time, detail, knowledge, and skill. In addition, radio encryption is available if necessary.
> (6) Radio communications is a very powerful and effective tool that makes Government more powerful. To be a true democracy, there is a need for law-abiding citizens for check and balances to monitor Government radio communications. Government can misuse radio privacy/encryption to cover

> their wrongdoing.
>
> Recommended amendments to the Communications Act of 1934:
> (1) Remove the restrictions of the radio spectrum on radio scanners for law-abiding citizens.
> (2) Allow law-abiding citizens to receive and decode non-encrypted analog/digital radio communications of Federal and/or non-Federal Government services.
> (3) Overrule the State laws that prevent the news media from showing some Government police operations.
> (4) Due to future digital technology and for open Government, restrict the use of radio encryption by Federal and/or non-Federal Government services. Allow encryption only for special operations and personal data. No radio encryption allowed for emergency and routine service by Federal and/or non-Federal Government services.
>
> It is wrong to restrict airwaves in a way that blames, restricts, and punishes law-abiding citizens. Instead, blame and punish the greedy companies who did not want to spend their profits to secure their cellular systems. Instead, restrict the criminals. Amend the "Wireless Eavesdropping Protection Act of 2000" and amend the "Wireless Privacy Enhancement Act of 1998" to remove radio scanner restrictions because unrestricted scanners can not receive today's digital cellular systems. American law can not justly control many other consumer electronic devices besides radio scanners that receive the cellular band. In addition, citizens of other countries have the freedom to own radio scanners with unblocked radio bands. These new laws do more to block Government public-safety monitoring by law-abiding citizens. A quote from a Congressperson, "The American people have a right to know what Government is doing around them." Radio-band blocking of scanners and purposely closing Government public-safety radio traffic is unnecessary and is not the American way. Citizens in other countries have the right to own unrestricted radio scanners!
>
> Privacy laws use the wrong approach to cellular privacy by enacting something never done in America before, that is the dangerous method of taking your rights of owning radios with unblocked radio-bands. Yes I am all for cell phone privacy, but it could have been done without radio-band blocking of scanners because the cellular companies could have simply secured their cellular systems. However, their significant growth and profiting from selling you their airwaves gave them superior lobbying powers in Congress. Well the cellular companies are finally securing their cellular systems making radio-band blocking of scanners unnecessary. Now look at what the Congress (House and Senate) Committees on Commerce and the CTIA are doing. Something you should fear and not allow. They are proposing new laws that require more radio-band blocking of radios although there are the currently unnecessary laws doing this. In reality, radio-band blocking of radios does not improve your cell phone privacy. Today's new secure cellular systems do protect your cell phone privacy. Help stop and remove laws that restrict your rights of owning unrestricted radio scanners, unrestricted from Government enforced radio-band blocking.
>
> Also, note that 106th Congress members of the House Subcommittee on Telecommunications, Trade, & Consumer Protection have not enacted H.R.783 to

> protect the amateur radio spectrum from commercial reallocations. The radio spectrum has always been a limited resource. It begins and ends in a band of frequencies limited by the law of physics. Maintain fairness because the new commercial wireless services are rapidly increasing. The Cellular Telecommunications Industry Association (CTIA) is not only lobbying against radio scanners but trying to lobby for encroachment on non-commercial (military, government, amateur, etc.) portions of the radio spectrum. http://com-notes.house.gov/cchear/ccmember106.nsf/ttcp#Members The House Subcommittee on Telecommunications, Trade, & Consumer Protection
>
> What is the Amateur radio service and why protect it?
>
> The amateur radio service is a "Radiocommunications service for the purpose of self-training, intercommunication and technical investigations carried out by amateurs, that is, by duly authorized persons interested in radio technique solely with a personal aim and without pecuniary interest." Radio amateurs are trained and experienced in electronics, propagation theory, and communications techniques. Amateurs also respond swiftly and effectively to calls for communications assistance when normal channels are lost. The amateur service has significantly contributed to the development of radio technology. Amateur operators continue to fulfill certain public service radiocommunications requirements, and increase their skills relating to emergency communications. During natural disasters such as hurricanes, floods, and other events, amateur radio communications have been particularly effective, and in many cases have been the sole means of communicating from the scene of a disaster.
>
> In addition to recreational use, amateurs use the amateur bands to provide public services in a variety of ways. The American Radio Relay League (ARRL) sponsored National Traffic System provides a nationwide network that carries thousands of messages monthly. This system is available in the event that regional or local disasters degrade the public communications systems. The Department of Defense (DOD) works closely with the amateur community in its Military Affiliate Radio System (MARS) network. Local amateur radio clubs provide communications support for community events, and are a source of trained radio operators to complement state and local communications personnel through the Amateur Radio Emergency Service (ARES) and Radio Amateur Civil Emergency Service (RACES) programs.
>
> Amateurs, or "ham" radio operators, provide a unique service to the public while enjoying a popular, technical hobby. Many innovative uses of radio systems have been developed by amateurs for use in the amateur bands, such as packet-switched systems and amateur television. The amateur-satellite service was started in 1971. Amateurs are always experimenting with point-to-point systems to push the state-of-the-art in antenna design and solid-state equipment, and to investigate the properties of signal propagation. Amateurs use Morse code, voice, packet-switched data, television, and satellite communications in the various frequency bands. It is estimated that there are more than 632,000 amateur radio operators in the United States, and over 2.4 million worldwide.

Thanks for forcing me to wait for your crappy pictures to transfer...
Why do you think it is that you see no one else using html with graphics?...
"Think, man, think.." It's one thing to use such in email.. quite another
to force the extra 'over-head' on the rest of us...

"Dick" wrote in message news:qOmK5.105$aI.17494@typhoon1.ba-dsg.net...
Nature

I have a nice Kenwood TM-V7A in the box almost new with software and cable
for programing from a computer,also the optional cable for remote head.
This has box and all docs and all that comes in box.
I am asking $350.00 plus shipping.You won't be disapointed with this
radio.Any questions please email me.Thanks

only that kind would post auction shit here and on other  N.G 's,
wouldn't deal with that  kind even if they had the last item left in the
world.by the way can tie up the  N. G.'s so can i .

Please could you disprove this one, before casting such comments about
anothers personal reading materials. I've posed a serious question & the
last thing I asked for, is someone to reduce this whole matter to some
Variety Theatre comedy farce. If you met me face to face, I doubt you would
have the same nerve to pass such a comment to my face, as you do here.

Yours,

Jim Hawthorne.

Well I for one am pissed off at all these so called News group
cops.(Wannabees)If I have an item for sale or for auction,the item is still
for sale!Is the News groups for selling items or what???
You guys or what;;;Don't jump on your high horses to tell us we can't do
this or that.I think I talk for a lot of people on these News groups that
are afraid to state the facts.You are probably the one that hides behind the
fake email (mike).So all in all,Shut up and read it or don't read it.Also
grow up and join the wannabee police academy......My two cents worth........

I for one don't c anything wrong with it as long as it's done within
reason..Some people will spam a newsgroup every couple of hours.One post is
good enough...

YOU'RE pissed off!?!!? You're the moron that not only sends inappropriate for sale SPAM to a shitload of NGs, you have the nerve to send it in HTML with crappy images embedded!

Plus, your HAM equipment for sale SPAM has little place in comp.sys.laptops. And the majority of NGs are for _discussion_, NOT for posting for sale ads.

As to reading or not reading an ad, you miss the point. Some people still pay per minute or per byte downloaded from the internet, as hard as this may be for you to believe. Why should MILLIONS of people around the world be forced to pay to download your trash?

There are appropriate forums for posting for sale ads, and appropriate formats for doing so. People subscribe to these forums knowing before hand what they'll receive. When people subscribe to discussion newsgroups, they expect discussion, not HTML laden SPAM.

Rather than sharing your childish tantrum with us for the rasher of well deserved shit you received in response to your selfish act, spend a little time educating yourself as to the form and function of the newsgroups.

After reading your most recent post, you're even MORE of a DICK than I had originally thought, if that's possible!

GTFU!

James

At least I can see what a moron is.You fit the description to a T.
Some people make a mistake on the html shit you talked about.That was
rectified.
If you so behind the time to pay for every minute your on,You deserve to get
it because you assholes have money to burn.I for one pay for unlimited
access.I am just a little ole poor boy,Not one of you rich bastards on cell
phones on the internet.If that don't satisfy, well all I can say is TOUGH
SHIT to you.

Fine! BUT due us all a favor. if it is on Ebay or another auction
house please put FA = For Auction..  FS = For Sale..

Their are those of us that do know where ebay is and how to
use the search engins to find what we are looking for..

I do not need to download something that has a subject line
that interests me only to find a link to ebay. IT'S a WASTE.

That is the other side of the coin.

Bob

What a bright and shining beacon of ignorance you are. It's almost refreshing if it weren't so sad. Have you never heard the term "think globally"? It applies to the internet.

Many people in countries throughout the world have one means of accessing the internet, the local government operated phone system. For which they often pay on the basis of per minute of connect time. It has nothing to do with "rich bastards on cell phones". I'm very happy that you have unlimited internet access, but not everyone is as fortunate as you.

Apparently, you have never bothered to read the Acceptable Use Policy of
your ISP at: http://www.qsl.net/aup.html so why don't you use some of your
unlimited access to educate yourself right now.

The simple fact that you can take umbrage over the fact that the answer to
your assumption "Is the News groups for selling items or what???" was NO, is
ample evidence of who has best earned the title of moron.

3's!

PLONK!

So blow it out of your shorts!

I and other have asked NICELY to place FA in the subject line if it is for auction. That way those that do NOT want to deal with it can filter it out. Then some purported "intellectual" does a FS FA that hoses up the filtering.

For YOU that insist that everyone drop dead for YOU - Stuff it!

I don't hide behind anything. Some courtesy was asked for, and it IS obvious that it isn't to be had from THOSE of YOU whom THINK that this is ONLY for their personal SALES.

IT IS NOT!

You want to be pissed off? GREAT! I hope this pisses you off even more. Go READ the FAQs - Or are you also illiterate?

Or what. This newsgroup is for talking about laptops. Others are for
talking about other subjects, such as ham radio (alt.ham-radio.mods) and
amateur radio (rec.radio.amateur.*).

Most are not for selling anything. Who told you they were? (It's clear
you are both new to usenet, and not possessed of any great degree of
social skills.)

i think most people would appreciate a FS is its available for immediate sale and FA if its on auction listing, clearly very different as posting FS already makes it slightly deceiving

The newsgroups which have "SALE" in their name are for selling things. If a newsgroup hierarchy includes a selling newsgroup, that's where you're supposed to post your message; anywhere else is merely spam.

> for sale!

To you maybe the item is for sale as your are after all selling it, *but* for the buyer it makes a big difference.
In the FS case they can look at the item, find the price (or make an offer) and then either buy or not.
In the FA, they have to go to a different site and bid. Bidding may take many days and they'll not know if they have the item until the last couple of seconds.

>Is the News groups for selling items or what???

Actually...No.
At least not the group in which I'm reading this "rec.radio.amateur".

There are groups such as where the FS and FA are appropriate such as rec.radio.amateur.swap and rec.ham-radio.swap, but none of the groups I see listed in the groups to which this was posted.

The FS and FA by convention let those who are not interested filter those posts out and they serve as a guide for those interested in them.

> You guys or what;;;Don't jump on your high horses to tell us we can't do
> this or that.I think I talk for a lot of people on these News groups that

That's why I use filters.
You made reference as to whether specific newsgroups were for selling and there are specific groups where FS and FA are welcome. On the other discussion groups they are not usually greated with a great deal of entheusiasm.

Me.? I could care less what your post, where.

>Also

And...I'm using the same e-mail address I've used for years.
My personal home page even has my phone number, but it only gets an
answering machine.
Being a consultant, my address is there as well although the page is not a
business page..

These morons who have items for sale or for auction don't care about (or too dumb to understand) Usenet convention as to what is/is not appropriate on a newsgroup. They spam any newsgroup they think might help bring in a buck. Discussion groups should not be cluttered with FA or FS ads and FA and FS are two different things.

FS is an item that is For Sale at a stated price, FA is an item that is For
Auction up for bid to the highest bidder.

If you're talking about contest logging software I'd recommend K1EA's CT log, it's pretty much a matter of a standard today. But it cost a lot of money ! Way too much, in my opinion.

On the other hand if you're looking for logging software for general use try Logger, it's free (download at http://www.ve9dx.com/logger.html) it works on the windows 9x/ME machines and I like it very much.

On the same site above you'll find a link to Writelog, windows based contest log, which apparently is a bloody good thing but I haven't seen it "live" yet so I can't tell you how good/bad it is. And it cost about US$ 75- which is not cheap either.

The best log however (for me) is LogPlus of N7XR (ex KD7P) it's a DOS based program, works on any 486 and higher computer and cost about US$ 50- or so. The problem is that Bob (N7XR) has some problems in his life and he's giving up on it (for the time being ?) so the future / support / rights are all questionable.

Hi people, I am wondering about software that will allow me to listen to CW
in QSO format.  I don't have a rig right now, but I miss CW.  My only other
suggestion is a rig, but I can't afford one right now ha ha.  Any help with
CW programs would be appreciated. 73 and thanks

Does anyone have any frequencies, call signs, etc for the International Space
station.

I know that 2 of the 3 Americans who were just sent up are hams and I have
heard some people talking that they wewre able to communicate with them.

Any information would be greatly appreciated

THANKS

Hi all.

Just to let you know that there is a new version of the PSK31 software
called DigiPan Version 1.5 now available.

http://www.g3vfp.co.uk

Have fun out there,

Dave G3VFP

The point of my question was....
The only prob you could find with using a CB antenna with ham-radio is the
cheap coax?...
Get it now? ;)
Do you not know there's a difference between a 2meter (or whatever you're
using) antenna and one made for CB's?...  Comprende?...
You need to go back and study some more...

These are the mods I did on the kit, to improve performance, save power, and possibly improve reliability.

Mod A) should be considered mandatory if you have a kit which uses the BF988 for Q1. This is because BF988 is not guaranteed to survive voltages at gate-2 above 7 volts, when it will reach 8.25 volts with a 12 volt supply!
(see
http://www.vishay.com/temporary/datasheets/discretes/rftrans/bf988.html
)

Mod B) is purely a power-saving measure, which is useful if you're operating off a 9 volt battery.

Mod C) Seems to reduce the tendency to pick up very nearby electrical noise sources, such as digital clocks, etc. The effect is hard to quantify, and may not help in many situations, but seems to do no harm and has the added advantage of increasing static protection on gate-1.

Mod D) Makes operating with gain all the way up more realistic. Previously, the load impedance seems to have dropped too low.

As with anything else, YMMV! :)

A) If your kit comes with a 3SK211 device for Q1, you can skip this mod. Otherwise, it would be a good idea to apply it. If your kit came with a BF988 for Q1, the gate-2 voltage is too high -- about 6.2 volts with a 9 volt battery, and 8.25 volts with a 12 volt supply. While this might be fine with the original device (3SK211), it's much too high for a BF988. If the kit has a 3SK211, you can skip this mod:

TO FIX FOR 9 volt operation:
   1) Replace R2 with 120K
   2) Replace R3 with 150K (or any value R3=1.25*R2)
TO FIX FOR 12 volt operation:
   1) Replace R2 with 120K
   2) Replace R3 with 240K (or any value R3=2*R2)

Measure the voltage at gate-2 of Q1 (at the junction between R3 and R2.) If you did it right, it should be fairly close to 4 volts now, instead of the original voltage, which would be about 6.2 volts.

B) LED1 consumes about 7.3 milliamps. This is about a third of the total power consumed by the kit! If you can live with a dimmer indicator to remind you it's powered on without using so much power, you can save some by replacing R6 with a 4.7K resistor (now we're down to about 1.6 mA). Or, for absolute maximum battery life, simply don't install LED1 at all, for a total power requirement of 0 mA. :)

C) Input impedance is a little too high -- seems to pick up buzzing noises just a bit too well. More on the theory that low-Z inputs tend to pick up less stray noise than high-Z inputs, replace R1 with 10K, which is still plenty high enough to not load down the whip or antenna wire.

D) Replace R3 with 330 ohms, to raise minimum load impedance with the gain set to maximum to a more reasonable value.

Note: The BF988 is a *hot* device, in that it has very high gain. Don't put more than a couple of feet of antenna wire on the input.

Well, my etchant tank I've been putting together seems to be working. Soon to etch PC boards, yay. :-)

I have an IC-735 that dies at the top of each Mhz band, when warm. Only covers about 10Khz, but it is on all bands. Anybody got any ideas what is causing the problem? I can probably fix it myself, but I need some idea where to start. Thanks, Colin.

Yep!..... I'm sure that was the reason for the AM broadcast... it was
Riley's voice, a beacon-style repeated message along the lines of
"Unlicensed operation on this band is punishable by fines, etc and causes
interference to licensed users.  Citizen Band type operation is only legal
between XX & XXMhz (insert CB band edges)"

These are not the 'exact' words, but close enough.... I'd call it the 'shot
across the bow'.  Now let's see what transpires!

Colin
I don't know the 735, but I had a few troubles like this in the past.
On a variable cap, the blades were warped and touched at one spot and lost
freq. It seemed to clear further on the as I continued to turn it.
Now I thought that when I went to varicaps, I would beat that problem. Ah!
but no. The pot track was bad on that one. So digital is the answer??? No,
now I have a digital doing the same thing. loses the last 100k of EACH band.
This one still needs an answer!!!
May have to reprogram the PAL chip!!
May give you some leads

Regards
Jack

This is the latest version of the Drake TR-4 series of rigs. Includes the hard to find noise blanker. Also included is AC-4 power supply and MS-4 speaker. Front panels are beautiful. Transciever has a serial number above 44K, power supply above 60K. Tried it on 40 SSB, almost the only operating I do, and got good audio reports. $500 plus shipping via UPS. Cannot ship outside continental US. Thanks for reading the posting.

73s,

Evan

Well, 1st off, the movie asks you to suspend belief in reality.... I mean, come on, radio's that talk to the past and future?... BUT MOST movies ask you to suspend belief in reality.... that's part of the fun.

As far as Ham operation goes... Quaid operates illegally.... he just get's out Dad's old Heathkit (which if I remember right, is in fact a receiver, NOT a transceiver) and starts making contacts... no license. If I remember right, there's also a scene in the movie that has the microphone he's using unplugged....   Ahhhh! ...The miracle of true 'wireless' communication.

I thoroughly enjoyed the movie....... but the original Ham Hype I heard really wasn't warranted.... If I wasn't already a Ham, this movie certainly wouldn't make me want to go out and become one.

I have been hearing what I think are CB type transmissions around 28.000 also in

```
AM.  Are
these unlicensed users? Has anyone else heard them?

Yeah, I have heard them and they are usually in Spanish..........I have no
doubts that it is a bunch of Mexicans who think it's cool to operate
there...........The Republic of Mexico has other things to do besides worry
about a bunch of Chicken Banders...........so we probably won't get much
help there.

I would agree that any enforcement south of the border is probably not going
to happen.... BUT, From what I've heard propogation-wise (I don't hear
Mexico when I hear most of the interlopers), I'd say much of the 'espanol'
is coming from Florida and the gulf coast... inside US borders.

Most if not all of the stations heard in AM or LSB mode above 28.000Mhz are
not amateurs (there is a small area around 29.000Mhz where AM is common).
BUT....BUT.... many foriegn countries DO allow SSB amateur operation
starting at the bottom of the band (28Mhz)... MOST of THOSE will be in USB
mode.  Of late, there's been a growing contingent of illicit, US-based,
English and Espanol stations on 10m.

It's funny then that I never hear any station ID's..............maybe it's
ok to not id your station in foreign countries then?

Well, just how OFTEN are you expecting an ID??... Canada only requires one every 1/2 hour and allows SSB operation from 28Mhz on up.... I have no idea what the rules are for other DX stations. Different countries, different rules. As quoted above by yourself, I stated that, MOST if not ALL, legitimate 10m users will NOT be using AM or LSB.... very few DX hams use voice below 28.300 except in contests.

Well, there were obviously many, many inaccuracies........ some of which were
pointed out by Cap'n Crunch......... the biggest that I noticed was the
constant referance to amateur radio being a hobby of the past...... which I
took to mean that it no longer exists. Coulda fooled me.

Anyway....... I also enjoyed the flick and went to see it a second time (on the
request of my daughter, who seemed to enjoy it more than me BOTH times around),
the second time was great fun for me as there were a few faux pas that I missed
the first time.

Here in Texas, I hear the Spanish language transmissions coming primarily from Florida. The guys are very open about their locations and what they are doing at the time. I can't recall when I last heard an interloper who was identifiably in Mexico. A couple of weeks ago I overheard two truckers on I-10 east of Los Angeles around 28.350, joking about their operations (in English) and asking anyone listening to send the 'black helicopters' to come and machine gun them into silence. There are some very strange people out there.

Trying to help a fellow ham get an AL-80B on 15/17 meters. Following the instructions from Ameritron for the mod, I was able to get it on 15. However, I could not get it to tune on 17 meters regardless of where the input slug was adjusted. Has anybody experienced this same problem and found a solution?

Thanks for reading the posting.

73s,

Evan

I have an older AL80A, but it should work out of the box from 15 to 160 meters. Just won't operate on 10-12 meters out of the box. What's the problem with the 15 meter settings?

We have l a Bestlink analogue TV satellite receiver at the schoo with the power supply faillure, but we have not the servicing manual to repair it.

Any body have the electronic scheme for this porpouse?.
Any body know the manufacturer firm of this receiver?.

Any help will be apreciated.

The data that we have are the following:
Made in Taiwan
master card Part Number: 44-29-001
Chung Sheng cs-02V0
9326

Please, contact directly with me.

Best regards.

FS The Hygain HDR300 rotator-good condition and completely rebuilt 1 1/2 years ago including main shaft. The digiatal controller is new in the box outside of testing with it a few times. Rotator was used with a talking contioller unit so the dig unit was stored. Have manual copy on all. The 300 will handle 25sq ft and has safety braking system. All mounting hardware and it will fit in a Rohn 25. They presently list 1200 and will I take best offer + ship on it. Thanks and 73s Lew KlNDV

I recently took my test and passed my technician ticket. Although not yet in the fcc database (meaning can not transmit) I bought myself a handheld (Icom IC-32A) I told myself i play with the radio and listen in on the frequencies and get familiar with it before i get my call sign from the big boss (fcc). the problem is the manual is much more complicated then the actual test was. Is there a book or website or anything you people can recommend?
Also, I went down to Los Angeles last week end and took my radio (I live in San francisco bay area) I listened on a few repeaters and to my surprise i heard alot of nasty languages flying in the air, alot of "F" words and so on. I thought part 97 forbid this type of language but i guess it's okay to use them. Is it?
well, can't wait to get on the air asap.

I find it interesting that you choose to preach your morals to everyone on this newsgroup, yet there are far more "criminals" that exchange software on the alt.binaries.warez.* newsgroups. I did a quick check there and didn't see a single post from you about their pirating activities. You'd better hurry up and get over there and convert those sinners.

c

Va. Code � 1-13.19. Person. The word "person" shall include any
individual, corporation, partnership, association, company, business,
trust, joint venture or other legal entity.

So, if an individual can own a license, so can a partnership or simply a
joint venture.

A typical Grant of License reads "This license agreement permits you to
use one copy of the programs included in this package on a single
computer. The software is "in use" on a computer when it is loaded into
temporary memory (e.g. RAM) or installed into permanent memory (e.g.,
hard disk, CDROM or other device) of that computer. ... (goes on to
discuss network licensing)." This implys that it is completely legal for
two or more individuals to buy a software package jointly and a: each
use it on as single computer or b: on seperate computers so long as it
was "in use" (as defined above) on only one computer at a time (i.e.,
each partner could have a copy of the software on a floppy so long as
only one of them put it "in use" at a time.

Try to find those old   45' vinyls from the Deutsche Amateur Radio Club
This was exellent material to lern the morse code
They most be from around 1960 - 1965 and each record got groups in 5 letters and digits
at 12 wpm but with some extra space in between . It was great to learn the code
records 7 and 8 did contain real QSO stuff too

So you're saying if I had a CD nearly full (580Mb) of recent to old
software (including many labs and tools) from most all brands for sale
or trade, and people could just email for a complete list, it would not
be a good thing??

Put up a statue of a great horned owl on the antenna - that should keep them away. Another solution may be to hang strips of cloth from the antenna and tower - one Expedition did that.

Hope the suggestions help.

Just got my license last week, and the actual paper confirmation and the radio I ordered even arrived on the same day (good omen?) I'm wondering if there's any 2-meter activity around here. I've tried several of the repeater freqs (off a list of repeaters I found for the state), and a few calls on 146.52 as well, but can't talk to anyone.
I know the receiver works, because I can pick up a weather channel outside 144-148 (the radio is a Icom IC T2H, by the way.)

Part of the problem is where I'm transmitting from - inside the barracks, about 5 miles from Junction City and about 15 from Manhattan, the two closest towns. I thought I'd be able to hit the one in Junction City from out in my car, away from all the interference in the building, but no luck. I'll be getting a mobile antenna, but not for another week or so.

If anyone could give me some pointers on how to get going here, I'd greatly appreciate it. Thanks!!!

Are you hitting the repeater, Zach? In other words, do you hear a repeater tail (the carrier for a few seconds after you stop transmitting), and usually a courtesy tone, after you unkey? If not, you're not hitting the repeater and nobody is going to hear you.

The next question is to see if you're even within the range of a repeater at all. Do you hear people talking on any of the known repeater frequencies? If not, then obviously there is not a repeater in your immediate area, and you're going to need a larger antenna to both hear, and transmit to, the closest repeater. A simple home-made j-pole taped to the inside of the barracks window might be enough to do the job.

Your best bet is to find out about the ham radio clubs in your area, attend their meetings, and find out from them what frequencies you should use for the repeaters closest to you (and to find out which repeaters others hang out on to talk). Use one of the internet search engines to find the ham clubs in your area (search for ham radio with the name of your town).

I hope that helps, Zach.

Probably that they're sold into worldwide markets each with different legal limits. Just like there's no amateur transceiver or transmitter sold new in the U.S. that will transmit on all HF frequencies up to 30 MHz. I had to dig to find the mod to my Kenwood TS850 so I could even work my CAP network frequency that is barely outside the hambands.

[cross-posted to rec.models.rockets & rec.radio.amateur]

I'm designing a CCD video camera, microphone, and transmitter unit to fit into a BT-55 (33.7mm) (admittedly, it uses a few off-the-shelf components). Still working out the details, but the biggest hurdle I see right now are the radio broadcast regulations. I intend to use the 434MHz channel (in the 420-450MHz amateur shared use band) because of it's long range at low power and because it can be conveniently received on any cable-ready TV or VCR on channel 59 (or just below channel 14 on regular tuners).

However, I've read that you need a HAM license in the US to use that frequency. I've been unable to verify if this is the case in Canada (where I intend to use this). I'd be broadcasting in fast-scan video (I believe this is the same as regular TV?), at 434-440MHz, at a power of approximately 200-500mW. Does anyone know if a license is necessary to do this in Canada?

P.S. I'm by no means a radio expert, I'm working off of the scant info I've been able to collect from the 'net.

I know the receiver works, because I can pick up a weather channel outside 144-148 (the radio is a Icom IC T2H, by the way.)
>
>Part of the problem is where I'm transmitting from - inside the barracks, about 5 miles from Junction City and about 15 from Manhattan, the two closest towns. I thought I'd be able to hit the one in Junction City from out in my car, away from all the interference in the building, but no luck. I'll be getting a mobile antenna, but not for another week or so.
>
>If anyone could give me some pointers on how to get going here, I'd greatly appreciate it. Thanks!!!

Zack, you should be able to hit 146.88 in JC and 147.255 in Manhattan. Maybe 145.41 Man as well- that one is run by the KSU club and I believe is on campus. As for 147.255, I can usually hit that one from Topeka with 10 watts- has an excellent receiver but it barely breaks my squelch.

You may also check the repeater directory to see if any of the above now utilize a PL-tone squelch. If it does and you don't have yours set correctly, you're outta luck.

Hi Paul,

Terry Rea, the CAR website admin, did something like this (I'm not electronically literate enough to know how similar his project was to your plan). Anyway, he has a tech report, and I believe some footage on the CAR web site. His email address is also available from there too. It was a pretty cool little setup, it all fit into one of the smaller Aerotech rockets.

Here's the CAR site: http://www.promotek.com/car/

Hope this helps you out!

I am deeply disappointed to warn you not to deal with Warren Brooks W4WWB. He advertised a radio on ebay that was complete, but needed some work. What arrived was a parts radio - Pieces were missing and it will not power up. After he ignored my emails I contacted him by phone and in his best good ole boy drawl he told me " you bought it, you own it". He would not allow me to return it for a refund. I know that ebay is a take your own risk venture - but deliberately lying about the condition of the radio to sell it is dishonest. What a disgrace to the ham community. Don't be suckered by this man like I was.

Hi folks:

I see plenty of QRP CW Transmitters and receivers on the HF bands, but how about projects in the VHF/UHF bands? I would be especially interested in the 220 and 432 Mhz bands. The antennae are smaller even for a Yagi.

Also, how about hams operating CW in these modes, are you out there?

I wish you a lot of luck. I believe that VHF/UHF QRP faces three problems: 1) There just is not much real activity on the weak signal portions of the bands. 2). At HF, most of the 5 watts generated in the transmitter gets to the antenna, unlike VHF where a significant portion of the power is lost in the feedline. 3). The quality/complexity of receiver and transmitter required for weak signal work at VHF is orders of magnitude greater that at HF.

Here in So. Cal, most of the non-satellite cw activity on the VHF and UHF bands takes place during contest weekends, and at or near the SSB calling frequencies. The CW portion of 2 meters is not used very much. Ditto for 6 meters, 70 cm, and 23 cm. My observations of the VHF and UHF bands here are that they are largely unused -- including the FM portions. Yes, there are lots of repeaters, but I here more activity in the evenings on the simplex frequencies than on the repeaters.

There used to be some cw only sprints on the VHF and UHF bands that produced some activity. If you have any ideas as to how to get more people on, I am sure that there are a lot of people who would be interested.

Good luck,

Tim AA6DQ

Hi Tim:
I can see there is a lot of possiblility here. I found a web site that had a tracking transmitter for 144 and 220 and thought to myself "Self, why don't you check on the QRP web sites for QRP VHS/UHF projects."

My web search was not exactly fruitful. VHF/UHF frequencies are always finding other pathways to ground rather than be radiated from the antenna as I understand it. They get lost in coax faster and easier.The projects that use them take a lot of planning as lead lengths and proximity of the parts to each other generate impedances that are detrimental.

My purpose is tracking and RDF for the purposes of finding lost model rockets, lost model airplanes, lost cars......and maybe start up an new class of QRP contacts. More challenges.

There have been all kinds of goodies published. From stuff
published in QST, for example, you could easily come up with
a VXO transmitter, a little brick amplifier and a direct-
conversion receiver. Or team up an HF radio and a transverter.
Whatever works for you.

Who to talk to with such gear is another matter entirely.

wrote:

> I see plenty of QRP CW Transmitters and receivers on the HF bands, but how about projects in the VHF/UHF bands? I would be especially interested in the 220 and 432 Mhz bands. The antennae are smaller even for a Yagi.

This is fine if you can form a local group of enthusiasts who build these equipment have regular schedules with them.

Otherwise you are only going to have contacts with a few big contest stations who have big antennas within 200 .. 300 km during some contests. Doing some hill top operations during these contests will help you to contact some more stations.

I am sorry for sounding so pessimistic, but many hams who bought a multimode (CW/SSB/FM) rig (which usually have about 10 dB more transmitter power than a QRP rig) were disappointed, since the actual number of stations they could contact did not increase as much as they had hoped.

The 144 MHz band might be a bit easier for CW QRP operations.

Long range (300 .. 600 km) VHF/UHF troposcatter communication requires 10 .. 30 dB more power than is available from a simple 1 .. 5 W transmitter with a short yagi.

But as I said, if you have a enthusiastic local group with whom to work with, there is no need to worry about these things, you can make plenty of contacts with them.

Try the main branch of your local library. Here in Calgary, the main branch
has the frequency lists, for Alberta, in the reference section.

Try http://neon.polkaroo.net/~darkwing/tafl/start.html

It will search Industry Canada's TAFL for all licenses in a region.
Region is defined as the area the Regional IC Canada Office Serves.
You need Ontario: Toronto Region.

I don't operate 432MHz and we don't have a 220MHz amateur band here in Ireland. Last year I built a simple CW transmitter for 2M. I made many contacts via the RS13 satellite (2M up 10M down). I worked several U.S. and Canadian stations and lots of Europeans. You will find details of the transmitter at: http://www.qsl.net/ei9gq

There's lots of CW activity on 6M. I use 10W from a homebrew transverter and a simple delta loop. I managed to work PY5CC who is almost 6000 miles away.

Have fun on VHF/UHF. You may lose a few decibels in the feeder but this loss can be offset by the gain of a good beam aerial.

73, Ed. EI9GQ.

The best solution I've found for this problem is to slip pieces of thin wall poly pipe over the antenna elements. Bird lands, pipe rotates, bird falls off. Funny as hell.

What's the best way to run an antenna cable from the roof of my car to the inside? Right now, I have the cable running through the door, between the frame of the car and the door. The door has a little but of padding, but I don't know how much that will help with protecting the cable. I checked out the cable after running it, and it seems OK, but I don't know how long it will hold up, even though I don't use that door that often. Is there a different way to run it, or should I use some sort of padding on it?

Thanks!

If you are willing and able to, the best way is to drill a hole in the roof for a good roof mount, and run the coax down through the hole. Drop the headliner and route the cable from the mount over to a front window post, then down the inside of the post, and bring it out under the dash to the rig. Then replace the headliner, and you are in business with a clean, well grounded installation.

Well, Zach, the method you're using right now is the most common method used on newer vehicles. Of course, it has several disadvantages - the cable will eventually degrade due to friction from the door being used and the area around where the cable enters through the door will tend to leak slightly.

People with older cars often solve these problems by making a more permenant installation - they drill holes for the antenna.

I decided to compromise by adding a glass-mount antenna on the windshield instead. The advantages is that there is no coax to feed through the door, and none of the resulting problems. The disadvantage is slightly weaker performance. Of course, I'm only using a smaller VHF/UHF antenna to access the repeaters, so this works for me. However, this method would probably not work well for the larger antennas needed for HF work.

"Slightly" weaker performance on glass mount antennas?? Glass mounted antennas SUCK..plain and simple.In physics you never get something for nothing and the coupling assemblies in the glass mounts are a joke.

It is easy to tell that you have never worked on an antenna testing range. You make a rather strong statement with not much to back it up. Over the years and the numerous testing that I have been involved with goes against your strong stand. I agree that the glass mounts are not 100 percent transferring the energy to the antenna. They are however rather good. In comparing them with a roof mounted antenna at 800 Mhz., there is not that much difference between them. As the frequency comes down, the coupling becomes more of a problem. You need to have the correct model to use at the VHF band. Don't go out and buy a cheap window mount.

Do you have any suggestions for a good window mount antenna for 2m/70cm?

Not true Jim, I have been working with antennas for many years. Even the
cheapest quality Magnetic mount on 144/440 band will run circles around ANY
glass mount. If you look at the coupling (or lack of it) thru a 1/8 inch

thick piece of glass(and considering its NOT tinted) you would see what I am talking about. While what your saying may hold true at 28Mhz (coupling) is way too lossy at VHF/UHF frequencies.

If this antenna is being used on a scanner one could probably accept the losses, but for transmitting I will go with the magmount everytime. The magmount provides a good ground at 144/440 but I wouldn't use one below 52Mhz.

What it all boils down to Jim is this....ALL glass mounts are lossy, some more than others. And a magmount will outperform ALL of them at 144/440 each and every time. A magmount is less expensive and re-useable, the glass mount was never designed to be re-used. The real antenna to use is of course is the body mounted style, with a 1/4 wave for the hilly areas (high angle of radiation) for places like Los Angeles and the "gain" style antennas for the flat lands like Texas. If you really work at an antenna testing range or chamber you already know this....Eddie

Eddie, aren't you getting it backwards? It's my impression that a through-the-glass antenna mount works better at higher frequencies than at lower frequencies. All cellphone antennas, for example, are throught-the-glass mounts... and they work fine at their UHF freqs.

Jerry

See, the problem with your argument is that you will only accept an all or nothing approach (the best antenna or nothing). Yes, there are antennas that easily outperform a glass mount antenna, but that is NOT the only consideration.

With a newer vehicle, some people are not willing to accept the damage that a mag-mount will do (scratches from the mount, scratches from the coax as it flops around, leaks around the door seal where the coax enters, and eventual damage to the door seal). And, these same people are certainly not about to drill holes in their brand new vehicle.

Therefore, the glass mount, even with its slightly decreased performance, is a viable alternative. And, contrary to what you say, the performance difference is indeed slight. In fact, after installing the glass mount, I noticed no decrease in performance in everyday use (I was still able to reach everywhere I had reached with the mag-mount).

Another possibility is to come down the A-pillar outside the rubber molding to the door hinge / hood hinge area into the hood compartment. From here, try and find a rubber knockout that you can modify to pass the PL-259 connector through the firewall..
Note:
 * The A-pillar is front door jam that vertically frames your windshield.   Not all vehicles have sufficient room running down them.
 * The area around the door/hood hinge can be tricky. Often an extra drip loop reduces pinching/binding at this point.
 * If the rubber knockout is big enough, a hole drilled the coax size and two slits extending the a diameter should pass the connector. If not, cut and resolder a new connector.
 * The antenna mount can be slid toward the rear of the car to take up the coax slack. Allow for creep over time.

KG7IL, Glenn in Renton, Washington.

So that is what it boils down to, I guess- Just how much IS your hobby worth? Case in point, met a guy at the local Denny's a few weeks ago. Had a new Lexus 400 with at least 3 different ham antennae on the trunk. Meanwhile, the local ham that lives around the corner won't put an antenna at all on his vehicle and prefers to use his HT with rubber duck despite driving an old beat-up Toyota Corolla (his argument is one of aesthetics instead of possible vehicle damage- he never has been able to see the beauty of a well functioning antenna and even refuses to put up an outdoor antenna on his house (EVEN TV!!)).

And that has nothing at all to do with it, mr.judge-wannabe...
It's no different than the arguments dog owners get in when trying to judge the others' love of their dogs by the kind of toys, dog-houses, treatment, etc. the owner gives them.... There's a lot more to this world than your clouded black-n-white views have shown you.

PS. I've a house in the city and a trailer-house out in the country. I've an HF antenna here in town and a 2m/440 antenna in the trailer-house.. What do you say about me, Oh Judge-wannabe? ;)
I could put up all kinds of stuff out there, but like the natural look of things. I could put up a few more here, but ham-radio just isn't worth that much to me, huh, Mr. Judge-wannabe?.. ;)

> worth?

No, I don't think so, Vance. I'm more than willing to spend money on this hobby. But, when it comes to possible damage to an expensive vehicle, I have to decide how much an slightly better antenna is worth versus that damage. In this case, I'm not willing to damage a $30k vehicle just to get slightly improved antenna performance.

But, I don't know why I'm explaining this to you. It's my vehicle, my antenna, and my radio. And I'll decide what is best for my situation. And I trust that you'll do the same for your situation.

And, now that the person who originally asked this question knows about all the available choices, I trust you'll allow him to made the decision for what is best in his situation, without judging what he considers the hobby worth by his antenna choice.

I've seen no perceptible difference between a 5/8 wave mag mount and the 1/2 wave through-the-glass antenna. I've had the latter for 3 years now and like it very well. I still have the mag mount as well and use it for rentals, etc.. I got them both at Radio Shack for reasonable cost and no longer get water inside the car at the car wash.

Hi folks:

A while back I was having trouble with some common mode interference between my antenna system and my neighbors TV's. I wanted to let you all know what finally happened.

I live in an "upscale" (if there is such a thing) mobile home park where the real estate lot is pretty large by mobile home standards. My double wide is nicel placed on the lot and there is plenty of cover tree wise to hide the evidence.

I wanted to use a vertical antenna to keep the real estate being used down and keep the installation as unsightly as possible. It was not a ground plane. The shield of the coax was attached to a 1 foot spike driven into the ground. the center conductor was attached to the base of the vertical. To be sure, I used wire radials spread out over the ground in even angles. 4 radials were being installed.

I was getting a good SWR out of this installation with minimal antenna tuner involvement. I gave out with a shout and sure enough the neighbor lady comes out and says "Somebody's 8 Sugar Uniforms " are being talked about on her TV. OY!

We talked and I called the Media ONE cable company to come check her installation because it is obviously leaking. I don't hear anything in my TV or FM radios and such. They come out and check and say it's not their problem and I must be cranking out BIG wattage. (All of 100 watts from a barefoot HW-101). I put a low pass filter on just in case.

I started tracking wires in our subdivision and sure enough find my ground plane wires are directly over the TV CABLE. After a few experiments with and without the ground wires I came to the conclusion that the ground there just loves to conduct radio waves.

I gave up the vertical and am now using a multielement dipole with elements cut for 30, 20, 15 and 10 meters. No problems at all even at full power. I have to use a tall pole as the center of the inverted V.

I guess I could have still used a vertical with an elevated ground plane, however, I would have had to set the guy wires on my neighbors side of the fence. With the Inverted V dipole I can keep all the wires on my side and parallel with the homes and perpendicular to the street. That way I present as little evidence to the managers eye.

As an aside, there are covenants and agreements that the property owner has made with the township. It is evidenced by the comments that the Cable TV office had. They said I could not have a "tower" by township rules and made comments like I should not even be using HAM gear near their installations. I don't think they have heard of PRB-1 up here. I don't have a "tower". All I had was vertical. Now I have a dipole.

I will have an invisible beam soon. I mean a wire beam antenna laid out on the roof of the house made of black wire to match the black shingles with a balun painted black. Maybe I will use a phasing circuit that will change the directions of the beam as well.

Where there is a will, there is a way.

Thanks for all of the advise from the last post.

Greetings one and all,
I have an old Pye "Ultimate" 26" Vidmatic that is being badly interfered with apparently by high RF fields around the set. I put an interference suppressor on the mains and it helped and then started on trying to shield the set from the high RF fields.
I heard about "Faraday panels" from somewhere but don't know much about them. I think one gets some cardboard then puts windings of wire around it spaced every 10cm on the x, y and z axis. Then put these "shields" around the set except the front and hope for an improvement. Will this work ?
Any feedback appreciated.

You must be sure that there is not a defect in the TV set that is causing some internal oscillations. You would need the proper test gear to trace this out.

As for shielding the set for outside interference, it is more complex than a simple Fariday cage.   The density of the walls would have to be high for low frequencies. There cannot be any holes in it, and the design of ventaltion is very critical.

As for the cost, it would exeed the price of a TV set that is properly shielded.

You can end up going through a lot of agrivation, and finding that the problem is an internal defect in the set.

I have had some sets where the internal shielding of the IF and tuner sections is very poorly done. In this case I told the customer that they would be best off buying a better quality TV set.

If I were you, I would consider getting a good Sony, or Panasonic set. You should not have any problems with this caliber of TV set.

You are correct in assuming I have a dual band HT. It's Kenwood a TH-D7A (nice HT btw). This is exactly what the guy told me last night. I understand what you are saying but I don't know how to do that with my radio. I don't expect you to know how to do it (I have a Kenwood TM-D700). If I put the mobile into Cross band mode, it automatically retransmits back to me. How do I stop it from doing that?

>Generally, a repeater (hi power & tall antenna) is easy to recieve
>on an HT, even though you might have trouble 'gettin' in' with the same HT.
>Use your CBR only to help you 'get in'

I'd still be back to square one at work. I can't even get a local radio station, let alone pick up a repeater.

>
>You should be able to set up your CBR with tone limited access and be able

I would only be doing the cross-band from remote control. I use my HT to bring up the CBR and use it to take it down as well as control the power, freq, etc...   I would only be using the CBR when I am remote controling the mobile and only to access a repeater I can't get to with only the HT.

That is unreal. That would never happen up here - the control operators
would shut it down.

I can make on in MapInfo if someone has the lat/lon of each one.  If not, I can
do it based on ZIP codes and get it to within, on average, about 3 miles or
less.

See HF Nets at URL:
http://ac6v.com/pagep.html

I've checked the links once a month for the last 3 years. Changes are always made as I receive them by E-Mail or see them on the newsgroups.

Would be more than happy to recieve updates. Let me know of any other nets not on the AC6V list as you find them. Thanks

Other people have already addressed two issues. First the ID, and
yes, you must ID on BOTH frequencies you transmit on. And since
the car won't retransmit in BOTH directions at the same time....

The other is AUX operation. Which means that you cannot be the
'control operator' and be remote on a frequency below I think 222.

But as you've discovered, the CBR funtion isn't really proper for
repeater access, except in one direction. Once the radio powers
up receiving a 'far' station, and it's sending it to you locally, you
CANNOT break back in until the repeater stops and your CBR
radio then goes idle. Not good. Not practical.

But CBR makes a GREAT one way setup. Or even park a car
somewhere to act as a local 'receiver' kind of thing...

Hi All

A friend requires two UT-50 or UT-51 CTCSS tone boards for an ICOM
IC-229H VHF mobile. The local agents do carry this board anymore.

Any help in locating the boards would be appreciated.

Please mail any info to reece@kingsley.co.za.

Thanks in advance.

Regards.

This is the basis IC for the little 80s keychain trf novelty radios.

Made them kind of microscopic Sparton Equasonnes.

Anyone out there know a source?

Please no overseas places - especially ones wanting cash advance.

Thanks

Marty

OK, I'm winging this from sketchy memory and with a way tired brain cell or two (read: may not be a question worth asking at all)

With the recent denial by the FCC of the Kenwood petition to allow their Sky Command System, saying essentially that since results of the remote operations would be perceived by the control op via the 2m side of things, 2m was part of the control link and hence illegal, aren't these 2m/70cm CBRs now in question?

****

As to the other replies, they're pretty much the same when I asked a similar question a couple years ago. To ID everything, I switch my HT to 2m, same freq as the CBR's 'input', and give my call. This ID's my HT on 2m, as well as my CBR on 70cm. I can verify by hearing myself on the 70cm 'half' of my HT. Switch the HT back to 70cm and continue on. Bit of a pain, but it gets the job done. Turns out I've put more energy into making my 2m HT reach the repeaters direct instead of 'toying up' my mobile rig.

Yeah that sounds really great. But you turn off these guys and watch all the other normal repeaters go to heck in a NY Heart Beat.

The other repeater owners will be begging you to turn it back on. All the wounderfull 435 users will go to the normal mono tone geek repeaters. 435 is national resource.

Along with posting to these newsgroups I sent an email to the ARRL and posed the same question to them. Here is their response.

Dear Marc,

Your assumptions are correct. It is critical that all amateur links must be identified. Cross band repeaters can be used legally under certain circumstances. I have attached the information from the FCC Rule Book which may be useful to you. 73,

John C. Hennessee, N1KB
Field and Educational Services Department
ARRL--the National Association for Amateur Radio
225 Main St.
Newington, CT 06111

Web: http://www.arrl.org/field/regulations/

Making Your Station a "Crossband Repeater" [2]

Modern dualband or tri-band VHF/UHF rigs often have the capability to do crossband linking. When operating in this mode, the users may call them "crossband repeaters." Actually they are often remote bases, such as when they are used to allow an operator with a hand-held radio to access a repeater from a location where he or she would normally not be able to do so. For example, a hiker in a remote location might leave his car where his dual-band mobile rig can access a distant 2-meter repeater. Leaving the mobile rig on, he then takes his UHF H-T with him, and can access the 2-meter repeater via his mobile rig.

Making It Legal

A crossband repeater (or "portable remote base") is okay as long asseveral conditions are met:

1) The user communicates with his crossband rig via the UHF side. Since this serves as his control and voice uplink, it is a form of auxiliary operation and must be conducted on authorized auxiliary frequencies above 222.15 MHz. Since the operator is the control operator, that person must actually be able to control the station! That person must be able to turn it off remotely if a problem develops. If he can't control it, it's not legal [97.7, 97.201, 97.213]!

2) If the control link fails, the remote station must shut down within three minutes which means a 3-minute timer is required [97.213].

3) The unattended station must be identified on all frequencies it transmits on. Since this is a form of remote base, the user's ID over the UHF uplink to the dualband radio also serves to ID the VHF output of the mobile rig. In the other direction, however, there is no way for the control operator to ID the UHF downlink from the mobile remote base, so some form of automatic ID must be employed [97.119].

Unfortunately, few manufacturers include the capabilities listed above in their rigs. Hence, to be fully legal, some form of add-on controller may be necessary.

Another use for crossband operation is to link together two existing repeaters on different bands. This is usually done on a temporary basis during an emergency, a drill or a special event. Again, the requirements for proper station identification and control on both sides of the dualband radio's transmissions still apply. If both the VHF and UHF transmitters are not properly identified and controlled, the operation is not legal.

In both examples cited above, the control requirement can be satisfied by having a control operator at the station, thus making it a locally controlled station. Although this may not always be convenient, it is a way to satisfy all of the station control requirements.

Contact your Frequency Coordinator First [2]

One other thing--when setting up your "crossband repeater," or portable "remote base," don't just plop down on just any old UHF frequency which appears to be "vacant!" It might be a repeater input, or a link or control frequency for some unknown repeater. The UHF output from your mobile rig might cause severe interference to someone else's coordinated operations, and you wouldn't be aware of it. Contact your local frequency coordinator for a recommendation as to what frequencies to use. Many coordinators have set aside frequency pairs which are designated specifically for temporary, portable or emergency repeaters. For the name and address of your frequency coordinator, see the latest edition of The ARRL Repeater Directory or check the listing on the ARRL Web page at: http://www.arrl.org/field/regulations/freqcoord.html.

Relaying Signals in a Repeater System [2]

Having the repeater's receiver and transmitter at one site can cause problems. These problems can often be solved with filters and duplexers, but an alternative is to separate the transmitter and receiver using a link between the two sites. Since filters and duplexers for 10 and 6 meters can be quite large and expensive, many repeaters on these bands use the "split-site" technique whereby a dedicated wire line or an auxiliary link on a band above 222.15 MHz is used to relay signals from the receiver to the transmitter. The latter is shown in Figure 2.

Some repeaters even have multiple remote receivers to expand or improve their receiving coverage. The signals from each of these remote receivers are then relayed on auxiliary frequencies back to the repeater transmitter site where a "voter" selects the best signal to be retransmitted. Note that every one of these auxiliary transmitters must be properly controlled, just like the main repeater transmitter. They cannot just be plopped down somewhere out in the "boonies" and left to fend for themselves!

Por favor, l�elo todo

Un colega de mi ciudad (usuario registrado)me pas� el Swisslog para windows
para que lo usase unos d�as y le explicase c�mo funciona, ya que de
ordenadores ni pum. (yo utilizo de libro de guardia uno que me hice en
casa).
Como esas cosas me gustan, lo rod�, convert� mi base de datos, etc etc. Y
por curiosidad estuve intentando hackearlo...lo logr� pero todo qued� ah�:
En mi distracci�n en lograrlo, ya que de paso aprendes un mont�n de cosas.
Naturalmente NO he pasado a nadie c�mo se hace, NI PIENSO HACERLO, ni lo
recomiendo.
A ver si me entiendes: El autor del programa se ha gastado un mont�n de
pasta en legalizar en primer lugar el motor borland en sus primeras
versiones y ahora con access. No se pueden vender programas en los que se
utiliza material pirata en su desarrollo!.
Despu�s de much�simas horas de trabajo, el hombre tiene que ir puliendo las
much�simas observaciones (a veces no muy amables) de sus usuarios
registrados (los hay que no tienen ni idea, pero hay que hacerles caso, ya
que son sus clientes!) ; en fin...un trabajo ingente, ya que el programa es
muy completo y el m�s configurable que existe (que yo sepa, pero salvo el
m�o hi hi)...en fin y ahora llegas por ac� y le pides a todos que te env�en
la clave o c�mo hackearlo...perdona, pero creo que tienes mucho morro! y
perdona la expresi�n.
Mira, el K6STI realiz� unos MAGNIFICOS programas creados en ensamblador, muy
cortitos, que eran una aut�ntica pasada; pues bien, no s�lo le crackearon
los programas y deshicieron de un plumazo su ingente trabajo y
conocimientos, sino que encima, le env�an un correo explic�ndole c�mo lo
hab�an hecho y que gracias por todo!!!!!
Bueno, del K6STI ya no se sabe nada y se dedica a su profesi�n olvid�ndose
del mundo de los radioaficionados por �ste motivo. (Hizo estos programas por
necesidades financieras particulares, pues atravesaba un mal momento tal
como explic�)
Bueno...juzga tu mismo, que el programa no vale veinte mil duros, sino
justamente el diez por cien o por ahi...
T� mismo, chico...

I just completed an overhaul of the Propagation Center at the HF Radio Resource Center (SWLing and Ham Radio). If you have not been by in a while, or never, please take a look at the resources available - they are updated in real-time. Included are eAlerts.

http://www.hfradio.org/propagation.html

I hope this is useful to you.

Thank you for reading my message today.

I can not remember the e-mail address for a list server I was on from Sanford University. Too many HDD crashes I guess. If you know the e-mail of the W6(YZ@stanford.edu?) Mail list please forward that address to me please. I would like to say my good bye's to those on that listserver as well.

Name here is Michael David Hiltner
Call is VE3VRQ (AKA: CF3VRQ), No doubt, I have QSL'd with many on 2m & 6m SSB!
Grid is FN13gx

I will be departing for Saudi Arabia on the 20th of this month, and have been notified that I will not be able to bring over any of my radio equipment into the country.

Since I will be there for 5 years, I have decided to liquidate my Amateur Radio Equipment Holdings. There is one station for intl radio users (about 300km from where I will be stationed), I intend to visit this QTH as much as possible.

Remember These items WILL be sold to the BEST OFFERED PRICE. There are only 18 days prior to my departure, so please Print &/or FWD this message to as many Radio Amateurs you know to get the widest exposure. Time is of the utmost importance. Do NOT hessitate on this offer! They WILL be gone before too long.

Items:

o Yaesu FT221r 2m
o Yaesu FT736r 2m / 440cm
o Mirage A1015g 100w 6m Amp
o GC Electronics 6m SWR & Power Meter
o General Electric (Shure Brothers) mic w/ 600ohm mic modification (This is what gave me my crystal clear transmitions on both my FT221r & FT736r!).

Buyer assumes the responsability for shipment / insurance of all of the above items.

Mailing address for your cheque:

Michael David Hiltner
VE3VRQ
18993 Loyalist Parkway
R.R.#3 Consecon, Ontario
K0K 1T0
Canada

Thank you kindly for your time & QSO's! I have enjoyed each and every opening I have been able to muster!

73 my friends! de, VE3VRQ, Michael

Hi all in the group, I have a sick Kenwood R2000 that has a broken display.
I need a replacement, the part number is FIP9D7. Has any one got one of
theese displays? and its not a FUTBA display. Its a NEC display

www.qrz.com/download/mods-i-k/ic207h.txt

Anyone seen this? Isn't it somewhat illegal?...

The same (tho altered slightly) text-file at www.mods.dk/
has this at the end...
"The Transmitter will work and transmit at ALL of the listed TX freqs. and
the power seems to be fairly broad banded and can handle it... I now use my
mobils as Ham AND GMRS. One less piece to lug around!"...

This topic has been debated for a long time. How'd you miss it? =)

Yes, using any modified AMATEUR gear for GMRS is illegal because the
equipment for is not type accepted for business or GMRS.

You can use modified AMATEUR gear for MARS/CAP if you're authorized.

```

I am looking for repeater frequencies for the following counties within the state of MICHIGAN:

SAGINAW
BAY
MIDLAND
CLARE
ISABELLA
GRATIOT
SHIAWASSEE
GENESSE
LAPEER
TUSCOLA
IOSCO
OGEMAW
GLADWIN
ROSCOMMON

I am looking for any of the vhf/uhf/microwave repeaters and also PL tones if necessary and status of the repeater in regards to membership requirements if any....

Is there a site that will provide this info or can someone share this info with me?

Thanks in advance!

Ryan

>Thanks,
>Mark K1DEL

Hi Mark,

I'll second Ed's recommendation to bring your higher-output HT. I went
with a group carrying HTX-202s with duck antennas last year and their
2.5W output was fine for most of the resort, but 1W was marginal some of
the time. Simplex will absolutely require more than 500mW if you're not
in the same park.

Here's the info for the WDW machines:

147.300+ WA4ABQ
442.000+ WA4ABQ (PL 1A-103.5)

The repeaters are on top of the Contemporary and are trusteed to DEARS,
the Disney Emergency Amateur Radio Service. Traffic on the repeaters
varies greatly; my August '99 trip found many DEARS members on a busy
machine, but this April I had only one QSO, that with someone driving on
the highway past WDW, with quiet most of the rest of the time.

If you're there in the span Oct 5-15, you may hear me on the 2m machine.

Enjoy your trip es 73

Mine literally caught fire! was gabbing on 2 meters when the car filled up with smoke. Yaesu made good on it. It seems that a voltage regulator shorted, placing full 12 volts on the entire radio. I was lucky I didn't lose the car as the self tapping screws that held the radio to the plastic ducting under the dash melted out of the dash and it fell on the floor. Yaesu was VERY VERY responsible about this. Just DO NOT under any case put this radio under the seat or in a glove box or anywhere else confined..... The plastic end pieces melted, the external speaker plug melted,the VHF final was burned beyond recognition. The plastic piece that holds the power cable in the case melted, the heavy black and red cables became bare. The factory fuse FINALLY blew by the time I got pulled off the road and over to the passenger side of the vehicle.Had to get a rag to remove the chassis from the car as it was melting the floormat (Nylon).....Kirk

Hello,

I'm am recently the proud owner of a 70' free-standing tower and a Mosley Pro57B. I've been working up to this installation for years and I'm having a blast! Unfortunately, so are the local birds and my cedar deck is now covered in bird crap!

I'd appreciate some helpful hints from anyone who has solved this problem!

Many thanks in advance...

Casey

Hi Casey,

I talk on VE3MOT all the time and certainly appreciate the fine job you have done keeping that machine on the air! I too have had to deal with of bird poop. Go to Home Depot and rent a power washer and clean up the bird dung. Next try a plastic owl up there on the tower that should help.   If they get use to the owl then put vaseline on the parts they are sitting on and they will not like that to much.
Usually the Owl works.

Barry

Do what the biz's have done around here.. Get plastic owls.. Once they are put up, there is no on-going cost or labor, as with just about any other solution, and they seem to work pretty well..

Hmm.. My place-of-work actually just got a couple beach-balls with giant owl-eyes on 'em which worked just as well, but didn't stay aired up for very long, which would seem to indicate that just about anything might work, just in case you can't find the plastic owls.. Possibly just plaques on each side of the tower with the owl-eyes painted on or something similar..
Be careful, tho.. Might get some religious org after you for putting giant eyes up there.. ;)

Max legal power. After a while, birds will stop being a problem, and
the cats will be fat.

You can also try a plastic owl on a weathervane.

Around here many people find that the birds get used to
the plastic owls after a while and ignore them. Plastic
snakes are sometimes also effective (at least for a while.)

I've seen applications where they put up garlands of wire
spikes about 2 inches long spaced about 1-2 inches apart.
They don't have to be sharp (you don't want skewered
fowl hanging from your tower!), they are just there to
discourage the birds from alighting.

I don't know if this stuff is available commercially and it
might be too much to put it on all the horizontal surfaces
on a tower. And then you have to worry about how to
climb the thing without sticking your feet or bendint the
spikes.

Have you tried ultrasonic noise?

Richard

I have 5 of the type M68729 class C (i.e. FM) 30 Watts out average, 40 Watts max. These will replace older M57774 module just fine. The input drive is 300 mW for 30 watts out. I am asking $50.00 including shipping to conus for each of them them. RF parts wants around $70.00 for the same.
I will sell them all for $200, this is the equivalent of getting one for free.

These are brand new never been used and still have the one inch leads on them. I have 4 of them in a sealed rack and one loose.

Thank You,

Bryan Fields, KB9MCI

Hi there!

On behalf of two friends, I am looking for cloning software for the Icom IC-T2 handheld VHF radio and the Icom IC2100H VHF mobile radio.

All help will be appreciated.

Thanks in advance!

Regards.

PS. Why do the different radios come with so much disabled?...
Is it to discourage non-hams from buying 'em as general-coverage scanners, possibly?...
I'd sure think that most non-techy hams would be willing to pay more to have the extra capabilities already enabled.

That's not been the case at all around here (the dfw area, where I've no idea how birds learn what owls look like.. I've only seen a couple here in all the yrs I've been alive) at all.... My company, for example, has had the owls over the parking lot for.. who knows.. 5-10yrs.. and before them.. the cars would almost require a car-wash sometimes just to get home because of the birds 'roosting' in the telephone poles.. Since then, it's been a "rare bird, indeed" to find any bird-cr*p on the vehicles at all.. It's the same with a cell-phone tower over here near my house. You'd expect to see some birds up there.. Not so, tho, since they installed the owls.. Hmm.. I assume they're owls, since I can barely see 'em way up there...

What if you could lease/buy an old (currently unused) radio-station tower out in the 'boonies' which's nearly 500ft tall? Would you still need special permission from the FCC to exceed the 200ft limit?...
Someone else out there would have already thought of it, I'm sure, if such isn't either impossible or unaffordable.. just a'wondering...

BD,
   If it is a former radio station and the tower is 500 feet tall, I'd
be willing to bet there is already at least one light on the tower
now.
At dusk, it probably still turns on, and then off at dawn. The owners
have been paying for those lights since they bought the station, and
~you~ will if they sell it to you. They'll stay lit until they take
the tower down.

And your point is?... Hmm... ;)
I expected to have to pay any ongoing expenses.. Taxes, electricity, upkeep,
etc..
Just a'wondering about getting around the height restriction on ham
antennas.

---clipped---

BD,
   I wasn't aware there was any height restrictions on ham antennas.
I was pointing out that the tower was already lighted, so no big deal
with the FAA.  Load the thing up!  Ought to work great.

Hmm... I finally got my books out and found the reference I was thinking
of..
In Gordon West's Extra Class study-manual, it says "An amateur antenna must
be no higher than 200ft" and "if you live within a block or two of an
airport, you may not put up an antenna structure higher taller than 20ft
above existing structure."

Part 97.15 of the FCC regs simply says "(a) Owners of certain antenna
structures more than 60.96 meters (200 feet) above ground level at the site
or located near or at a public use airport must notify the Federal Aviation
Administration and register with the Commission as required by Part 17 of
this chapter."

So....? One of of the actual test answers (according to the Gordon West
book) is
"The structure must be no more than 200ft above ground level at its site"..

Am I confused or what? ;)

Go to the next gun show in town, someone there will be selling the Chinese
single shot pellet gun for around $20.00. This little beauty sends a pellet
on it's way at about 800FPS with a single pump. Deadly accurate and nearly
silent. I have pelted coyotes in the hindparts at 50 yards and you could
still hear them yelping for the next 10 minutes.

You can take over that tower with the proper paperwork, but you are responsble for it.

If they retain ownership, you can install an antenna on it or use it as an antenna without problem. The purpose of the rule in part 97 is to make sure the FCC knows about any new structures or changes in structures that might create an aviation hazzard.

They wording implies you need their permission to use the tower for amateur radio, but the fact is they care less unless the tower becomes yours or it is a new structure...or you alter its height.

I have a 318 foot tower here, registered with the FCC and FAA, because it was a "new structure". Below 350 feet you need a side marker and a top beacon and paint, or a strobe system. At 500 feet, you need multiple side markers and beacons at half and full height. Expect a big electric and maintanence bill if the tower is over 350 feet.

BTW, I consider my 300 foot tower one of my poorer Ham investments....except a commercial company now has offered me a sizable amount of cash for a ten year lease, plus a monthly lease fee for the property it is on. They are willing to pay it all up front in cash, and allow me to continue to use the tower. I'll make about 2500% profit on the tower if I take their deal. Not bad for a two year investment.

Motorola will pay me $2.25 per foot per month for antennas at various
heights on the tower, if I keep the tower. They want to install two
antennas for now, one at the top and one at 250 feet.

So the tower could be an investment. I like to think of them as "money
trees". Just be sure there is some demand in your area.

Conservative neighbors should be no problem.

It's those whiny LIBERAL neighbors who will have a hissy fit.

Anyone in Utah with a Saber, who wants to split the cost on RSS
software?

I will be buying a RIB and building the right cable, but $350 for
software that only I will use is a bit steep. If someone(s) would like
to split the cost on the software, it won't hurt so much.

Why not just come out and ask if anyone's interested in committing a crime..
stealing something.. robbing a company.. or.....
I'm sure the hardware's also a bit expensive too, so why are you not asking
if anyone's willing to help you shoplift it? They could probably get out
the door with one while you were paying for yours, and then you could split
the cost on that too..
Do you not steal EVERYTHING *only* because you'd get caught?
Maybe I'll call 'em up and let 'em know what you're planning on doing so
they can send you only half the software...

Lets just hold on just a minuet. If the party of the first part and
the party of the second part decide to enter into a limited
partnership and the limited partnership owns the software.
But you can only run it on one machine at a time.

Back off a little on the sanctimonious bullsh*t. Motorola
has screwed more people in the two way business than
a hooker with a pager.

And if you really want to know motorola has a lot of
software and modified software floating around.
ever hear the term "Lab Software".

At the moment with 3 differant suitcase programmers
and a PC to run their crappy software you still do not
have all you need to do the programable radios.

Just My Opinion..

Bob

There's no crime involved here. Go buy a clue, Sherlock.

Motorola sells the RSS software to just about any person, persons or
corporation in the US who will sign the license. I'm looking for people
who want to co-invest and become co-owners of a legal copy of the
software.

Of course. I'm only going to have one RIB.

The problem with leaping to conclusions is that you usually don't quite
make it to the other side . . .

Better yet, if you have a Walmart nearby, just go get the Gamo P-23
pellet pistol. With round lead shot (included, more from Gamo), it is

highly accurate and very powerful (420fps). With a half hour of
practice, you can easily hit a small animal at fifty to sixty feet. You
can even get a laser sight if you need more accuracy (
www.gamo.com/ushome.html).

I use it for pest control all the time. At typical distances, it does
no great harm to the animal, but stings like heck.

By the way, the Gamo P-23 is a 15 shot repeater (with round lead shot). In other words, this repeater will fire 15 shots, without reloading, as fast as you can squeeze the trigger. Therefore, if you miss the target with the first shot, you have 14 more to get the job done.

RIB = Radio Interface Box, i.e., the connection between the computer that
runs the software and the radio to be programmed. You can't do anything
with the software without the RIB, you can't do anything with the RIB
without the software.

Hey Keith,

Where are you located?

Don't let Big Doofass get to you. There are a lot of police wanna-bee's that think they should tell everyone what to do. Post your address, thanks to BD maybe a copy will just show up in your mailbox...

Hey BD...go back under the bridge where live you Troll.

Dan

>
>Why would your attitude be 100% different if he were asking for co-thieves
>to physically steal something?... Why?... What's the difference?
>Bad Dude.

Sorry, princess, but that *is* the difference. Theft implies that the owner no longer has physical possession of his/her property.

The constitution allows congress to enact copyright laws for authors "to promote the progress of science and useful arts." *Not* to protect the profits of corporate entities or of any other special interest group.

Some hacker from Norway has been posting code that allows the viewing of DVD videos on Linux systems. The makers of DVD disks rigged them to only be viewed on Windows systems, and are suing anyone who spreads the word about this code, including a guy who even printed the code on a T-shirt! It turns out that when you buy a DVD, you're not buying the DVD, but only a license to use it.

People are fed up with this crap, and they're rebelling. It's not about to stop anytime soon.

Actually YES, I do. But, often you'll find for that one reason or another,
people will not update their information with the FCC. So, better to verify
the info yes? No?

Do you have first hand knowledge of the specifics on the license agreement of
this software, or do you just enjoy playing net cop?

I've had experience with Motorola.. Not with that specific program, but...
"LICENSEE may not copy, rent, distribute, transfer, sublicense, or lease any
rights in the Software. LICENSEE may not reverse engineer, decompile,
disassemble, or create derivative works from the MOTOROLA Software. " seems
pretty common for their license-agreements
Anyone got different info, possibly? No?
He's still attempting to pirate/steal, no matter how "easy" it is...

And, lover-of-princes, you've no idea what you're talking about.....
Are you allowed to copy (photo, digitize, etc) books for the purpose of
giving friends copies? I know that people do it all the time, but is it
really legal? Why not?
Any thief can/will give you several good reasons why they should be allowed
to steal.

No, dummy. Perhaps you could ask some 12-year-old to get out the
dictionary and read you the definition of the word "partnership."

Motorola's license agreement permits use by partnerships, and for any
number of radios.

If you really had any "experience with Motorola," you would have known
that.

The difference is that what I'm doing is legal, though it does require
an IQ above room tempterature to understand it.

Ask that 12-year-old. There is a legal definition.

> "Get real," Dummy...
> A thief will try anything, wont they?...

Well, in your case, it seems that you are divert attention from your own guilty conscience by assuming that all would act as you do.

What other conclusion is there?...
You're asking for someone to pirate software...
I know.. Email Motorola, ask THEM (let 'em know exactly what you're planning
on doing, exactly what software you're buying, etc) and then post the answer
here.. Ok?...
I bet you're not interested, are you?...  I wonder why...

But it is OK for a shop that repairs motorola equipment to buy
ONE (1) copy of programing software and install it on three
technicians laptops and the shop machine. I am talking a
"single user" copy. NOT a site license..

Just my opinion..

Bob

No, YOU are suggesting that. This says a lot about your character, none of it very good.

> I know.. Email Motorola, ask THEM (let 'em know exactly what you're planning
> on doing, exactly what software you're buying, etc) and then post the answer
> here.. Ok?...
> I bet you're not interested, are you?... I wonder why...

I already did, by PHONE. The response was that so long as only one copy is in use at a time, loaded onto one computer, there was no conflict with the license. It doesn't matter how many people pay for it.

Maybe you think that every single technician at a radio shop buys a separate copy of the software . . ?

If you had made that call before playing Fearless Fosdick, you could have saved yourself a lot of embarrassment.

But you're looking for someone on the internet to share in the cost of
buying it. If they were going to be using it on the same computer,
well........... hmm.... Why ask here, dood?
So... Trying to change your story now, eh?

If you will READ (by which I mean you have to comprehend the meaning) the original post, Keith says "Anyone in Utah with a Saber, who wants to split the cost on RSS software?" What that means is that he's looking for someone in HIS area to share costs with, not just browsing the Internet.

Def: partnership: the state of being a partner.

Def: partner: one that is associated in action with another : COLLEAGUE

(Definitions from the TIME magazine - Webster's New Ideal Dictionary)

BTW, I consulted with my brother, who works for Motorola. He says that Keith's plan is considered acceptable usage under Motorola licensing. No piracy or copyright infringement.

Mark

BTW: The next sound you hear will be the block sender filter on my PC.
Bye-bye BD. "Ploink!"

> majority of it on HF?

Yes and yes. Yes there is some CW on the bottom end of two meters, but by far the majority of CW is on the HF bands.

To come across CW on the bottom of two with any regularity would be highly unlikely. There are those who work Earth-Moon-Earth (EME), by bouncing signals off the moon and there are some who hold meteor scatter schedules as well as a *few* who actually go down there and operate CW.

Picking the bottom of 75, 40, or 20 would yield many more signals, but a high percentage of the ones on 20 would be DXers. This part of the sunspot cycle would probably make 80, or 40 CW the most likely.

As you are going to be listening, a receiver, or tranceiver set up insided just tied to a wire should hear many signals. No, it's certainly not like using a big ourdoor antenna but it should suffice. If you transmitt, watch out for the advanced and extra portions of those bands.

  Is it practical to try to use CW through a low
> power station like a handheld/mobile, and if so, what's a good rig to
> use?

Hand held? Probably not, but a mobile with a key jack will do fine.
Many of my friends operate CW mobile, which to me is more dangerous than trying to dial a cell phone even if you don't have to look at the key.

Some clubs hold code practice on 2 meters so you might find something locally.

Good luck, and again welcome,

Roger (K8RI)

HI all:

I don't know about the 17 meter band, but I do know that the Southwest Research Institute in San Antonio, TX has pointed circularly polarized LF antennae at Jupiter. Seems that they are researching it or have been in the past researching it. Information is 10 years old now.

The Jupiter noises I've heard about are around 20-21 MHz, I think, and are best
described as crashing waves, not babbling water.  I always assumed the babbling
water sounds were some sort of encrypted transmissions.  (By the way, has anyone
heard the "whalesong" signals lately?)

Into bicycling and ham-radio?
www.lafetra.com/bmha/
I'm not sure it'd be worth the $10/yr membership fee, but the idea's
interesting.. ;)
When riding solo, atleast, talking to the 'locals' as you pass thru towns
can be quite a bit of fun..  Unlike when driving a car when travelling thru
an area, contacts can last for hrs when pedalling, too..
Assuming you've a good battery, that is...

I have 1 of the type M68729 class C (i.e. FM) 30 Watts out average, 40 Watts max. These will replace older M57774 modual just fine. The input drive is 300 mW for 30 watts out. I am asking $50.00 including shipping to conus for them. RF parts wants around $70.00 for the same.

These are brand new never been used and still have the one inch leads on them.

Thank You,

Bryan Fields, KB9MCI

The Pro43 is better for cellular monitoring as it has 30khz steps, the 200XLT
only has 25khz steps.  I know because I have both of them.

Steven

no that was me showing how it should be. I get tired of opening a FS post and finding out it is a FA at Ebay. I don't like Ebay what so ever.

And just what do you get out of 'cellular monitoring'?
You only hear one side of the conversation, and that's only while it stays in the same 'cell'...
Anyway.. Because of the lower prices for digital phones/plans nowdays, I've no idea why people continue to let you people listen in by using analog..
Btw, I don't think it should be illegal to listen (which's probably what you assumed after reading the above)... If a person's going to transmit uncoded, they should expect to be heard.

How to get photocopies of articles

What will it cost?

For the first article, the cost is �2.75. If you order other articles at the same time, add �2.00 per article. Note that multiple parts count as separate articles. Please add postage and packing at �1.25 (�2.00 for overseas surface mail).

Do I need to specify anything?

We publish several books and magazines so it is important to state that the article comes from Radio Today. Please also give the article title as closely as you can, and the year and issue it appeared in.

How do I order?

Cheques should be drawn on a UK bank and made payable to the publisher: Radio Society of Great Britain.

Send to: Radio Today Photocopy Service, RSGB Sales, Lambda House, Cranborne Road, Potters Bar, Herts EN6 3JE.

Or you can make a credit-card order by e-mail to sales@rsgb.org.uk, by telephone to 01707 659015, or by fax to 01707 645105.

Help me please

I need WiNRADiO WorldStation Database Manager software because the disk
I have has goten damaged and winradio or the dealer I bought it from
will not replace it. The stupid part is it that comes on a 3.5 disk,
not a cd, so I didnt think to back it up on to another disk.

I have been searching all over for this program with no luck. If you can help me out, it would be sincerely appreciated.

Thank you for your help in advance!

FS: NorCal 40A 40-meter QRP Transceiver

The NorCal 40A is perhaps the most efficient and clean-design
single-band QRP rig made. The receiver uses only 16 ma!
This one was built by an HP electrical engineer, and modified
to work reliably from 10-15v.

Band: 40m

Transmitter: 2w at 13 v. Very efficient.
Receiver: 4-xtal filter, RIT, Uses only 16 ma.

Available at www.ebay.com. Search for "norcal".
Auction ends Sunday, Aug 20.

I have 1 of the type M68729 class C (i.e. FM) 30 Watts out average, 40 Watts max. These will replace older M57774 modual just fine. The input drive is 300 mW for 30 watts out. I am asking $50.00 including shipping to conus for them. RF parts wants around $70.00 for the same.

These are brand new never been used and still have the one inch leads on them.

Thank You,

Bryan Fields, KB9MCI

I have an Amperex solid state 2meter amp. It is 100w mobile unit
(13.8vdc)
I am looking for a schematic for this unit. Can anyone help?
Frank

I have the following items for trade or sale. I'm looking for a GP68 VHF keyboard programmable or nice scanner / dual band transceiver. Let me know what you've got, I will sell outright..make offers.

1 - Panasonic WV-CD22, serial # 98B03403 1/2" CCD Black & White Camera, muliti output plus 0-99 number overlay on picture output (set inside camera). Rear of camera has "VD", HD/VS, & "video" output which outputs great picture when c-mount lens attached. Runs on 12VDC power supply (included) Photo upon request
http://home.cfl.rr.com/mcguyver/wvcd22.JPG

$Best offer or trade plus shipping

1 - Panasonic WV-BP105 1/3" black & White CCD camera with Panasonic WV-LA4R5C3 Auto Iris lens (4.5mm) and AC power adapter (unit runs on 24AC) Small piece of autoiris lens fron missing which does not effect image quality, Photo upon request - $Best offer or trade

http://home.cfl.rr.com/mcguyver/panaccd1.JPG
http://home.cfl.rr.com/mcguyver/panaccd.JPG

I have a great condition Compac LTE Elite 4/40CX (486dx4/40) with 16MB mem, 340MB HD, 2 PCMCIA slots,COMPAQ 192 19,200 Data/Fax PCMCIA modem with instructions & Cable (plus nylon case), good battery, AC cord, compact case, external as well as integral mouse. 1.44MB floppy, printer port, serial port (DB9). Unit is in pristine shape, NO pixel damage on nice color TFT screen. Unit now runs w3.1 with delrina fax pro. TCP/IP drivers, compaq drivers, MS Office 4.2, 8.4" color tft screen, lotus software. $Best offer plus shipping or trade

Check with your local radio store. I know ARRL and others have
published both paper and CD-rom based versions.

I have one from "FBEnterprises" in Ridgefield, WA. Its 1995 though, not
sure if they still make it, and this one is a laminated one for Northern
California only......

==============
Yep ArtSci has the following publication:
Repeater MapBook 2000 Its the Y2K Edition!!!

The Repeater Mapbook contains locations of thousands upon thousands of open repeaters throughout the U.S., Canada and Mexico. These DETAILED maps show all highways and major cities in each state. A PERFECT travelling companion.

Can be seen at URL:
http://www.artscipub.com/

Also lots of repeater guides on the web -- a few with maps, at URL:
http://ac6v.com/pageai.html

I have 1 of the type M68729 class C (i.e. FM) 30 Watts out average, 40 Watts max. These will replace older M57774 modual just fine. The input drive is 300 mW for 30 watts out. I am asking $50.00 including shipping to conus for them. RF parts wants around $70.00 for the same.

These are brand new never been used and still have the one inch leads on them.

Thank You,

Bryan Fields, KB9MCI

I am selling my excellent condition Yaesu FTV-901R Transverter...no reserve on Ebay, auction ends August 28! (Monday):

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=416427431

*144-148 accepts two other band modules
*20 watts input
*ALC
*RF bypass for HF operation
*drive requirements 3V RMS at 28 - 30 MHz (requires xverter output or attenuator)
*120VAC operation
*split for FM Repeater
*includes cables and instruction manual

Contact me at n1ar@yahoo.com with any questions. There are some nice pics of the transverter on ebay.

I have a Kenwood TM-V7 dual bander with the cool blue face for sale.This radio is mint condition and works great.I will sell this with optional software and cable for downloading and setting up from a computer.Also will get the optional Extension cable for the removable head.The program is a nice and easy to use program.This has box and all the paper work with it.It has the software mods for the mars/cap all done.All software mods.This is a great radio and the reason to sell it is I have one setup in the base now.
My price is firm at $400.00 plus you pay shipping.I think shipping would be about $20.00.
Please email me if interested.

I am looking for people willing to help a soon to be Amateur Radio operator!!!

I am looking for people to type up and email me some sample CW QSO's so that I can input those into a program that I have that converts that into a file that I can burn to CD (as opposed to cassette tapes)

I have a CD made of the alphabet, numbers, punctuation and prosigns..... but I need the QSO's too!

Any and all help appreciated and include your call and email and I will inform you when I pass the tests and am an Operator if you wish!

Thanks!

Ryan

Hello,

I have a program, that I used to sell for �10 but I give it away these days,
that will generate random QSO's, it's not a file of pre-generated QSO, it's
driven from a file containing names, equipment, locations, countries, etc
and generates genuinely random QSO, It runs under DOS but does work well
under a Windows DOS window...

If you want a copy then let me know...

Martin

Hello,

My name is Marc Smith, my call sign is KC8ORT. Last weekend I installed a new Kenwood TM-D700. Yesterday I was using the Cross-Band repeater function of it and was told by one of the maintainers of the local repeaters in my area that operating in CBR mode was illegal. Before I continue, let me explain how I was Cross-Band repeating first.

On my HT I was transmitting and receiving on a single UHF frequency. My mobile was setup to listen on UHF and retransmit anything coming in on UHF to the input of a local repeater. In reverse, it was setup to retransmit anything coming in on the output of the repeater to the UHF frequency.

I was told that because I am the control operator of the CBR station (the mobile) I have to ID every 10 minutes on the frequencies it transmits on. Because I am the control operator of my HT and the mobile Cross Band Repeater, when I ID on my HT and it is retransmitted on the Mobile, it's being retransmitted with my ID and is legal. That's not the problem. The problem came in when the CBR retransmits the output of the repeater on the UHF frequency. When it retransmits on the UHF frequency, the only ID on that transmission is the ID being transmitted on the Repeater and therefore illegal.

Is that accurate?

That is what I was told. However, after talking to other hams who I know use Cross Band Repeating, I was more confused than ever. One person said it was completely legal. Another person said it was controversial.

I am very confused on the legality of using the Cross Band Repeater function of my radio now. I am not using it as a permanent repeater installation, I am using it to extend the capabilities of my HT so when I am out of my vehicle I can access local repeaters on low power and so I can access repeaters that I can not access with my HT. Also, I work in an office building that seems to act like a big RF shield. I can not receive any repeaters in my building at all but outside I can just fine. Cross Band repeating would enable me to use the repeaters in my area from within the office building where I work. With out CBR, I am unable to access any repeaters.

Thank you for any assistance you can provide.

> on UHF to the input of a local repeater. In reverse, it was setup to
> retransmit anything coming in on the output of the repeater to the UHF
> frequency.

One way to avoid some of the problems you're having is to only use the UHF side of the HT transmit to your remote VHF CBR (I make the assumption that you're using a dual band HT) and use the VHF portion of your HT to listen directly to the 2m repeater.... this'll eliminate the retransmission of the repeater output on UHF (saves your base or car battery the extra wear and tear). Generally, a repeater (hi power & tall antenna) is easy to recieve on an HT, even though you might have trouble 'gettin' in' with the same HT. Use your CBR only to help you 'get in'

You should be able to set up your CBR with tone limited access and be able control it (on/off, etc) from your HT via tone as well.... if the CBR is left on without a control op present at the control point (your HT or at the base) then you probably oughta' look into an ID cicuit AND (IMPORTANT) check with your area's repeater coordination group as to what frequencies you should be using.

> I was told that because I am the control operator of the CBR station (the mobile) I have to ID every 10 minutes on the frequencies it transmits on. Because I am the control operator of my HT and the mobile Cross Band Repeater, when I ID on my HT and it is retransmitted on the Mobile, it's being retransmitted with my ID and is legal. That's not the problem. The problem came in when the CBR retransmits the output of the repeater on the UHF frequency. When it retransmits on the UHF frequency, the only ID on that transmission is the ID being transmitted on the Repeater and therefore illegal.

I must admit I find this book a bit on the theoretical side. It's
great if you know the basics of solid-state design (and/or have a
degree in mathematics) but as an introduction to practical
design it leaves a lot to be desired.

Perhaps a couple of the chapters from "The Art of Electronics"
(Horowitz & Hill) are better suited (although they treat mainly LF circuits).

I would really like to see other suggestions...

May I suggest a book of elementary transistor theory which will
includes the principles of transistor biassing. Nearly all components
in a transistor amplifier are there just for bias and decoupling.  Its
a relatively simple subject. You would then be able to draw your own
circuits with component values. Much more satisfying.

I can't give you any specifics.

But there have been articles about biasing bipolar transistors in various hobby magazines over the years. They'd include equations for getting the right values, but they were a generalized approach.

Once hand held calculators became cheap, I think we saw a rise in equations in the various ham magazines. In the late seventies, Ham Radio magazine had a number of articles about using programmable calculators to design various things that most up till that point would otherwise have picked out of a cookbook.

One series in QST comes to mind. It must have been 1974 or so. "Learning to Work with Semiconductors". It went through quite a bit of territory, with practical circuits but also equations. I can't remember if it dealt with transistor biasing, but I do recall that it was a good place to look for how to compute capacitor values in various oscillator circuits, and figuring out transistor power output circuitry. It was not for the professional, but for the beginner who wanted to do more than copy a circuit from somewhere.

For a while, the ARRL published a booklet that contained the articles in that series, but it didn't seem to be available for all that long. I thought that was a mistake. While some of the material ended up in other ARRL publications (I see an echo of it in Solid State Design for the Radio Amateur), it is a shame they didn't keep it as a book. Of course, with QST on CD-ROM, the series is readily available now.

Someone mentioned "Introduction to Radio Frequency Design" by Wes Hayward and now published by the ARRL. I think it's a worthwhile book but it's a bit hard to place. It covers some areas that isn't covered in the usual ham books, or in a different tone, but in some areas I was expecting deeper coverage. My reason for mentioning it, though, is that it comes with a disk of programs for computing various RF-related items. I can't run it at the moment, but I recall there is a program for determining the biasing of bipolar transistors, and another for biasing FETs., along with programs for designing filters of various kinds.

Really!!??

I only paid CAN$6.95 for mine, and that was new, from a local RS store [?].

Reg-
Your suggestion is a good one. The elementary part would have to include more than a paragraph of explanation of why/how.

Bias is what I am concerned with mostly. The reason to bias is simple, it needs some current in the base to turn it on. I want to know how to determine how much and the effect on the other end. Also what current is essential and what current is not. I have a very basic circuit, collector feedback bias, common emitter, with a 330 resistor in parallel with the collector/base junction and a 1K resistor above that. The !K resistor is in series from the battery to the juntion of the collector and bse bias resistor.

There is no emitter resistor.

the kind of things I want to determine are the idle current, base current, emitter current, DC inout resistance, DC Output resistance, AC input impedance, AC output impedance, methods of coupling stages, how much feedback is enough to oscillate a stage, how much input impedance is good for buffer amplifiers and such.
I want to be able to determine the biasing and coupling using Voltage Divider, self bias etc.

Tall order?

Curtis Scholl
cscholl@izzy.net

Noble Publishing has as an "electronic book" on a CD call "ELEKTA Professional" which has some "TOOLS" which will do what you want, but the text part is pretty lame on theory and how to bias transistors.

The best book I have found on biasing transistors is "RF CIRCUIT DESIGN"  by
Chris Bowick, starting on page 117. It is published by "HOWARD W. SAMS &
CO.".

                                                                Bill

Hi Group:

  I have a number of schematic diagrams with crystals in one frequency
or Variable with loading. How does on create an equivalent circuit with
the same characteristics of a crystal? what is involved?
1. I would assume a resistance of the crystal itself
2. I would assume an equivalent "loading" to match the capacitance of
```

```
the crystal
3. Maybe Q is important?

  I would, given my understanding, that the crystal has a high internal
resistance? One cannot just replace the crystal with a tuned series or
parallel LC combination.
  Am I rehashing an old subject?

That price was about two years ago. Perhaps the prices drop as they
do when items are cleared out after being discontinued.

   That price was about two years ago. Perhaps the prices drop as they
do when items are cleared out after being discontinued.

Curtis,

Assuming it is an AT cut crystal and running at typical HF band frequencies the crystal probably has:

Q > 50,000 , might be > 500,000
Resistance < 60 ohms, might be < 10 ohms
Temperature stability 0 to 50C < +/- 100 Hz at 10 MHz, might be < +/- 20 Hz
Time stability < < 0.1 Hz per day at 10 MHz

The crystal is commonly modeled as a series tuned circuit with an additional capacitor across the whole thing. For a bunch of odd reasons this can look like a parallel tuned circuit at some frequencies.

Your best bet is to build a VFO with the range you are looking for and feed it's output into the crystal socket on the radio. That way you can optimize the VFO and you don't mess up the radio. About all it will cost you is another transistor and about 3 ma or so of current.

Hope this helps

Curtis,

In a nutshell -

BIASING CLASS-A JUNCTION TRANSISTORS

Class-A means the collector current is never cut off during the signal
input voltage swings such as in a microphone amplifier. All the rest

is a simple application of Ohm's Law.

There are two characteristics of the transistor of importance -

Vbe is the emitter-base voltage needed to turn on the transistor collector current. For silicon transistors it is 0.65 volts. For germainium transistors it is 0.15 volts.

Beta is the current gain Ic / Ib, the DC collector current divided by the DC base current. The value of Beta is obtained from the data sheet. For small-signal types at audio frequencies it is usually between 50 and 300. The exact value doesn't matter. If you don't know have a guess at 100. This allows some calculation so be done in the head.

Obviously, DC emitter current = collector current plus base current. But current gain is so high, for many purposes the collector and emitter currents can be considered to be equal.

For small signal amplifiers think in terms of milliamps, k-ohms and volts. Base currents are in microamps.

The most general circuit is a transistor plus 5 resistors. Get yourself familiar with the standard values in the +/- 5% tolerance range. Resistor values increase in 10% steps. There's also a DC supply Vdc.

Draw the circuit :-

R1, R2 and R3 are all in series across the supply Vdc with R1 connected to Vdc.

The junction of R2 and R3 is connected to the transistor base.

R4 is the collector load resistor between the junction of R1 and R2 and the collector. It need not be a resistor. It could be the primary winding of a transformer, or a tuned circuit with negligible DC resistance.

R5 is the resistor between emitter and the grounded side of Vdc.

For good stability versus temperature and time there are two things to remember -

(1) There must be DC negative feedback from the collector or emitter circuit to the base. R1 and R5 provide this feedback. If this most general circuit is simplified either R1 or R5 may be removed. But NEVER remove both. Negative feedback also ensures that differences in Beta between one transistor and another have little effect on circuit operation.

(2) The bleed current through R2 and R3 must be considerably greater than the base current. As a rule of thumb it should be 5 or ten times

greater. I like 10. This ensures that changes in base current due to changes in Vbe due to temperature, do not signicantly change the voltage across R3. If the volts across R3 are stable then all other circuit voltages and currents will be stable.

Begin by choosing values for the collector current and bleed current through R2 and R3. Don't choose a much greater collector current than necessary to supply the signal current to the next stage. Especially if the equipment is battery operated. The base and emitter currents can then be calculated.

The total current from the supply is the collector current plus the bleed current through R2. This is also equal to the emitter current plus the current through R3. It may seem obvious but it is always advisable to check.

Then allocate voltages to the junction of R1 and R2, and to the emitter. The peak signal voltage expected at the collector must be taken into account. The collector signal voltage must not be allowed to swing within about 0.5 volts of the base voltage or signal distortion will occur.

The emitter to ground voltage should be 2 or 3 times greater than Vbe. This swamps changes in Vbe due to temperature or to variation between one transistor and another..

The voltage across R3 is then emitter volts plus Vbe.

The currents in all resistors and the voltages at all circuit nodes have now been estimated and the resistor values can be calculated. Select the nearest resistor values from the 5% tolerance range. Check that R2 and R3 are not so low in value as to divert the incoming signal current away from the transistor base.

The base signal input resistance is 25 * Beta / Ie ohms where Ic is emitter current in milliamps.

Being obliged to select from preferred resistor values will slightly upset the originally selected DC circuit voltages and currents. So now recalculate everything starting this time with known resistor values. It might be necessary to make judicious changes in one or two resistor values or voltages. But it's a very uncritical matter. The DC feedback makes for an easy life.

The most sensitive part of the circuit is the ratio of R2 to R3 which determines the voltage across R5 and hence also the collector current. (The circuit at DC is an emitter follower).

If R1 is not zero then the junction of R1 and R2 is normally decoupled to ground via a large value capacitor.

R4 can be set to zero and R1 can become the collector load.

R5 can be decoupled to ground or part of it can be left un-decoupled to provide negative at signal frequency. This also greatly increases base input impedance of the ampkifier. Zin = Beta*R5.

The output signal can be taken from the emitter. The circuit is then known as an emitter-follower. High input Z and low output Z.

The most simple circuit has all resistors removed except R1 and R2. This is suitable when the collector DC voltage is not of great importance such as very small signal amplifiers.

Incidentally, the voltage gain for silicon at LF in the above circuit is always 40 times the DC volts-drop across the collector load resistance. Not everybody knows that.

With a little practice and a pocket calculator you will be able to design circuits in a couple of minutes. Its great fun especially when a circuit is put together and the measured DC voltages are all in their predicted ball parks.

Hi :
```

I am in one of those "touchy feely" areas of the country where technical thinking is not considered good form. The popularity of books of a technical nature are less important than those of the "politically correct" variety. Rocketry is not even represented except as a model rocket venue. Amateur Radio is represented only by the ARRL Handbook. While the ARRL books are good, they don't through my thick skull.

See ya!

Curtis Scholl

Curtis, I know exactly what you mean. If you can't understand the
ARRL high-tech bible then just do as I say. The disciples, the old
wives', don't even understand their own tales.

Its all so simple really. See you again.

It's a shame that they would want any money for them. They could so easily be available on pdf or html files on the web.

Dean,

Knights CB do the manual about �6 I think - must get one myself!

try www.users.zetnet.co.uk/knightscb/

they are in Lincs UK - sorry meant to mention it earlier in private post,
forgot I had the site...

Carolyn

You might try looking at Ian Purdies site at:

URL - http://www.integritynet.com.au/~purdic/

This has some very interesting pages on transistor bias and more.

Tom.

I tried putting the output of my RF signal generator into the xtal
socket of my Pixie II....got nothing. Putting the VFO signal into the
xtal socket may work on some radio's but not mine.

Your RF generator probably has a 50 ohm DC current path right between its output terminals, one of which is grounded. That's a little like trying to conduct a choir with a chain saw. Most crystal oscillators are delicate, high-impedance affairs - you must treat them gently. Try coupling through a pair of small capacitors.

A couple of things that can go wrong when feeding a VFO into a crystal socket:

1) Neither side of the crystal may be at ground. You may have to get a ground connection another way.

2) There is only a 50/50 chance the pin you pick first is the right one to drive.

3) The crystal pins may be D.C. hot. Grounding one or both may stop the whole thing from working at all. Best to DC block the signal going in.

Hope this helps.

The W32A will be a better choice if you want to try to work any of the satellites with your HT. The ability to receive both bands at once is the clincher here.

BTW; I have owned all three radios. I have a 81A at the moment.

If you drop the satellite use, get the T81A. I don't use the upper and lower end much, but it is nice to have it if you want to try it out. And I heard the thing just underwent a price drop. The quad bander works great and the only thing I dislike about it is the lack of warning when the battery runs down. It just quits.

Lewis

Yaesu FT-50R with the following for sale. Must sell due to health problem.

Unit in 10/10 condition
Includes:

FT-50R with FTT-12 Voice recorder keypad
1 - 9.6V NiCd, great shape with clip
1 - 6V NiCd, great shape w/ clip
Standard charger
Original box, manual and schematics
ADMS-1E software and programming cable
Stock antenna
Leather belt case with quick remove belt loop

A great system, I'd love to keep but need the money. Unit has been MARS/CAP modded. Asking $300 plus shipping. Click on below link for photo

http://www.bv.net/~mcguyver/ft50r.JPG

:

Try this.  Connect the signal generator to the xtal socket
with a 1/4 wave long coax cable. Remember to take into account the
velocity factor or the coax.  This creates a low Z to high Z matching
transformer.  Don't let the long length bother you.  It works.

Glenn Miller's favorite side man Tex Beneke (K0HWY) Died this morning peacefully in his sleep. He played Tenor Sax in the 1940 civilian band of Glenn's and sang many songs with the orchestra. He appeared in both of Glenn Miller's films, "Sun Valley Serenade" (1941) and "Orchestra Wives" (1942)

He will be always remember for his vocals on "Chattanooga Choo Choo", and "I've Got a Gal in Kalamazoo" the former of which became our Nation's first gold record ever awarded in 1942 by RCA Victor / Bluebird Records.

When Glenn went in the Army, Tex was drafted into the Navy. After Major Glenn Miller's death in 1944 and the AAF Band disbanded in 1945 it was Tex who was asked by Helen Miller to form a new Glenn Miller Orchestra, from 1945 - 1950.

His Band was probably the best of all the official Glenn Miller bands.
A truly sad loss to all Glenn Miller Fans everywhere he was 87 years
old.
He was also an avid model railroader.

In order to decide if these radios are worth buying,
we need to know condition of the receivers (modified? unmodified?
complete?)and what is written on
the nomenclature plates and rear of the chassis.
Thanks,
D.S.

New Hams, you can help too!!!!!!!! Read on!

The Murgas ARC will once again be operational for the ARRL June VHF contest. We are at the confluence of Luzerne, Columbia, and Sullivan counties in Northeast Pennsylvania(FN11uh.)   We will work you, just yell! The contest runs from 2PM Sat June 10 through 11PM Sunday June 11(eastern.) We will be running 6m, 2m, 222, and 432/440. All modes.

FM- 2m FM will be done hourly starting on 146.49 and moving to the other standard freq's. This will begin a couple hours after the test starts. FM will be left on continuously on the other bands, however the ops sometimes do not pay attention as well as they should.

If you work us on one band please ask for a schedule for another. All stations are interconnected and you will instantly be met on another band. You may also do this if you are unable to secure an answer from us on FM.

I do not know what everyone has done, but SUBSTANTIAL improvements have been made to the 432 and 440 FM stations. If you have been unable to get a contact in the past now is your chance.   We do QSL.

With any HT you can work us from a realistic range. It is not uncommon to work HT's with ducks at a distance of 200 miles! We do have directional antennas, though, so patience may be required. We regularly watch crystal clear TV from the other side of the state.

All you need for an exchange is a callsign and a grid square. If you do not know your square go here: http://www.arrl.org/locate/grid.html

There will be an AIRSHOW at the local airport during contest weekend. If you have an HT a contact would be appreciated.

For the most part advance schedules are not accepted. However if you are seriously interested in doing something unique you may contact me no later than Wednesday evening Jun 7 and I will forward your email to the right person. Send it to jss167@yahoo.com

Our club website: http://www.qsl.net/k3ytl/k3ytl/index.htm

Thanks. All contacts are greatly appreciated.

Hi there.
Looking for the following old electronic musical gear from 1950-1990,
BROKEN OK:

Synthesizers (MOOG, ARP, Oberheim, Sequential, Roland, Korg, etc)
Keyboards
Drum Machines
Effects
Sequencers
MIDI modules
vocoders
Any old patchable modular or analog synth

Roland TB-303 Bassline
MC-202 Microcomposer
TR-909 Rhythm Composer
TR-808 Rhythm Composer

If you have something I might be interested in or know someone who might,
please email me with price and condition as well as phone number if you'd
like. Thanks in advance.

For example but not limited to:Oberheim Xpander
Pearl SY-1 Syncussion electronic drum module
Simmons SDS V electro drum brain
Simmons SDS7 Digital-Analog Drum System (brain only)
Roland MC-202 Microcomposer
Moog 16 Channel Vocorder
Roland Jupiter 8
Roland TR-808 Rhythm Composer
etc!

Hi all,

I have a Mirage D15 440 amp. This unit has developed a short and I do not have the manual. I bought it used . I need a schematic for this unit so maybe I can try to repair it. Anyone have one?

Thanks

Barry

I carry a VHF radio and have the following list of frequencies programmed when I go to Rainier. I'm not sure which freq is for what purpose, I scan them. I generally get traffic stops and backcountry rangers, but not much from climbing rangers. They may have a different freq which I am not aware of.

Visit a new shortwave/amateur radio links page (with a focus on the Shortwave listener/DX-er)...

http://swlinks.webalias.com

Maintained by Yours Truly. Last updated today... new features added!

Just some links to other sites, but a nice collection slowly gathered over about 4 years. Most of the links should be active, there may be a few dead ones. A good place to start your shortwave surfing.

Cheers,

Tim

Beleive it or not, but when climbers go up Denali in Alaska the
recommended radio is a handheld CB on, of all things ch. 19.

Few climbers own a VHF radio. A 2-way programmable unit is not cheap. A CB is much cheaper. In Canada where it is common to fly into huts by helicopter in winter the VHF is much more useful, and at least one hut requires the group to take one. They can be rented in that area. But Denali is heavily climbed - that would be a lot of rentals.

Also, there may not be many VHF repeaters in the Denali area, limiting the range of these units.

I only acquired the VHF relatively recently after climbing for almost 20 years. And really only because I now guide others.

Jim

Yes to all from what I understand. Plus HF eventually as well.
The 2m station SHOULD be on the air by spring 2001, that is if there
isn't more delays or problems.

73,

I've read that eventually they'll have SSTV on almost continuously.

Regardless of how or why the original was posted, I find it amazing
that 'hamtrader' would try to pass his postings off as 'personal'

Especially when he's tied to a business.

And when in the past he's had controversies here on this newsgroup
as well.

Remember, this was the guy that posted a commercial message about
a discount for 'real extras' that could prove they were extra before the
5wpm change.

Well, as I learned the hard way awhile back there are two JOEs out there whose name and whose call suffixes are JOE. Both sell used ham gear. One is anti-new-Extra and the other one is sort of a Maalox moment of an email "buddy", but a pretty good guy nonetheless. He isn't a big multinational operation, either. He makes sixth-grade spelling errors all over his web page, and he probably operates out of a fraction of a garage. But he is an honest working man, and he doesn't have an attitude about hams who were unfortunate enough to upgrade after 15 April 2000.

I'd recommend that you go back carefully over your notes and see which is which. Boycott the bad one, but don't let the other one get hurt by sharing the same name and ham suffix. Buy lots of stuff from the good Joe and tell him old "Doggie-poo" sent you by.

I made the same mistake you are, and I owe him at least that much.

Mike, I have looked in amazement at all these postings, I have never seen
the like of misinformed people, they are all untitled to their opinion, no
matter how wrong and misguided they might be, but I can not let your LIE go

unchallenged. First of all I am not linked to a business, I am a Ham in Little Rock, AR. Call is K5JOE. I have registered a Domain name of Hamtrader.cc because of all the flack people like you were giving me confusing me with K7JOE after the Slow Code Lid posting he made. If you are to keep any kind of credibility, you will check out your facts before you accuse anyone of something they did not do. Mike do you have enough character and honesty to say here that you are wrong in your bashing of me, K5JOE, instead of K7JOE, or do you just not let the facts stand in the way of a good story that you can post on these news groups just to see your false accusation in print!!!

I apologize to the readers of these news groups for all the false accusations directed at me that got all this started, but I am NOT K7JOE, I am K5JOE, NOT A BUSINESS, JUST A HAM THAT LIKES TO SWAP AROUND AND GET DIFFERENT EQUIPMENT. If Mike does not correct his bashing of me thinking I was K7JOE then all will know that he was just put up to this by his buddy Bobo or Bodu or whoever started all this.
Hamtrader

Mike may have confused K5JOE with K7JOE but the origional
complaint was the Spamming of this NG by hamtrader@hamtrader.cc.

I have 1 of the type M68729 class C (i.e. FM) 30 Watts out average, 40 Watts max. These will replace older M57774 modual just fine. The input drive is 300 mW for 30 watts out. I am asking $50.00 including shipping to conus for them. RF parts wants around $70.00 for the same.

These are brand new never been used and still have the one inch leads on them.

Thank You,

Bryan Fields, KB9MCI

TCARC Hamfest 2000 Scheduled for Saturday, August 5, 2000

ITHACA, NY The Tompkins County Amateur Radio Club announces the Finger Lakes HAM-IN (hamfest and fly-in) at Tompkins County Airport (KITH), 3 miles NE of Ithaca on Route 13.

Two FREE Seminars will be offered by very familiar names:
- Debugging an Antenna System by Natan Huffman W6XR
- 160m DXing on a Shoestring by Steve Hanzlik K2CDJ

Vendor setup starts at 6 AM (inquire for Friday night setup time).
Doors open to the public at 7 AM Saturday morning.
Hamfest closes at 2 PM Saturday afternoon.
Large hangar for indoor vendors and displays.
Drive-in setup.
Paved outdoor flea market and parking.
Airplane rides and aviation displays.
Breakfast and lunch served by Boy Scouts.
Admission: $5.00.
Indoor tables: $10.00.
Outdoor space $2.00 each.
Under 18 free.
ARRL sanctioned. VE exams, antenna seminars, walk-ins welcome.
Talk-in on 146.970-.

More info, including a PDF format flyer, is available on the club website at
http://www.compcenter.com/~tcarc/

For more info contact Richard Spingarn 607-387-5251 or email richard@eagleprint.com.

Hello,

I have been considering on purchasing another IC-706 for my mobile, but want to upgrade to the mkIIG. The best new price I have found is Texas Towers at $999. Anyone know of a better source/price? Anyone have a nice used IC-706MkIIG at a good reasonable price?

Thanks,

I have 1 of the type M68729 class C (i.e. FM) 30 Watts out average, 40 Watts max. These will replace older M57774 modual just fine. The input drive is 300 mW for 30 watts out. I am asking $50.00 including shipping to conus for them. RF parts wants around $70.00 for the same.

These are brand new never been used and still have the one inch leads on them.

Thank You,

Bryan Fields, KB9MCI

As an aside, when I was first licensed (1962) the rules said that if
such a need to violate a rule in an emergency, you were to send the FCC
a letter explaining the circumstances after the emergency was over.
This requirement may have gone the way of paper log books.

Hello,

I have just made a deal with another person on the newsgroup for the purchase of his IC-706mkIIG. Thanks to all that replied to my post.

Thanks again,
Piero - N3FVG

Hello,

I just wanted to let everyone know who may be interested, I received an e-mail from Barry Onigman <barryo@tiac.net>, who works for HRO, (unknown which branch, who stated that HRO just received a small shipment of brand new IC-706mkIIG's yesterday. If you call, ask/e-mail Barry for further details. I do not know the price, but I do know HRO will match any competitors price and Texas Towers currently has them for $999 with the Icom coupon.

Good Luck....

I'm not a lawyer, but here's my take on it: First, there are no provisions that I know of for a non-ham to operate a ham radio station for ANY reason; it is ILLEGAL, period. Second, the "necessity defense" is generally applicable, IN COURT, as part of a body of evidence to exonerate a defendant who does something normally illegal, in an emergency, to prevent or alleviate death, serious injury, or perhaps major property loss. In other words, you make your judgment call in each individual situation and place yourself under the judgment of the court to see the necessity in the same perspective as you saw it.

Can anyone suggest a source (in plan, kit or prefab form)
for a compact low power transmitter suitable for use as
a tracking beacon? What I'd like is a small unit on a PC
board or small box that will fit inside a 2in. diameter

cylindrical space and put out 0.1 to 0.5 watts on the
420-450MHz band. Audio FM modulation would work as well
as anything, although other modes (on-off keying via logic
signal, for example) could be useful also.

Oliver wrote:

> I got EXACTLY what you are looking for (well almost - my transmitter transmits only at 0.08W this way you won't need a radio license). My transmitter is very simple (continuous tone), but they are cheap.

Hello, Oliver - I've seen this unit on your website, and it is indeed close to what we're looking for, except for the power level... we have Amateur Radio licensees, and I'm trying to find out what it would take to obtain more power.

Thanks for the link - if we can't come up with a higher output unit, we'll most likely use something like this - and may consider it for an oscillator-modulator stage in a higher-output system.

The situation is almost identical here; protection of life and property is paramount and the rules go out the window in emergency situations. Several Northern states here have similar laws with respect to freezing conditions and snow -- one has to help. Similarly, no one has ever been charged for not doing it.

The Amateur Service here traditionally has far more than its share of seabag
lawyers (that from a Federal Communications Commission district engineer)
and you just saw one fly by.

In Australia the emphasis is on the requirement to assist in emergencies and
all licensees are obliged to assist where possible. I haven't found anything
prohibiting any other person from using ham gear to assist. For comparison
, the law in Victoria Australia says that any person who can help at an
accident site and does not is breaking the law although in actual practice
I have never heard of any one being cited or charged with an offence. Like a
lot of the rest of you I have to go along with the use of common sense.
For those of you in the States who might be worrying about lawsuits -
forget it. I don't think its against the law to try to help in an emergency.

Most states have a "Good Samaritan" law that covers you when you help
at an accident site as long as you don't try to do anything that you are not
trained to do. If you have been taught how to do CPR doesn't mean that
you can put in an E-T tube or start an IV just because you are at an
accident site. The rule is just provide the care that you were trained to do.

Hmmmmmmmmmmm... In maritime law, if it can be proven that you could've
rendered assistance, but failed to do so..... you can be sued.  ....Seems to
put 'responsibility' to your fellow man in a whole different light.

As to operation of a Ham Radio by an unlicensed person for emergency (Mayday
or SOS) purposes..... whether or not it's 'technically' legit or not, the
FCC would refuse to even consider the case.  There's been several examples
of ships at sea over the yrs effecting rescue via amateur frequencies... I'm
sure not all were licensed amateurs, but rather using amateur rigs (cheaper)
as thier Marine SSB rig.

The IRTU rules specifically allow any person to use any radiotelecommunications, whether licensed or not, to summon help in a distress situation.

Distress is defined as when life is in imminent danger.

Note the imminent. That means right now, not may be in a few minutes. Also note that it is life, not injury we are talking about and not property.

Hi groups:

Is there any FAQ or research source for descriptions of annoying modulated signals on the airwaves? I can describe many and everybody has probably heard them at one time or another.

What I am speaking of is the stations that broadcast the :

1. Woodpecker - Russian OTH Radar?
2. Water bubbling/brook babbling modulation
3. Multiengine Propellor driven aircraft at full throttle noise
3. Diesel Engine powered generator noise

Some of it drowns out stations I listen to. Jamming is still done in this world I take it.

And another question:

Is there a piece of computer software that would use the audio signal from the receiver and display the modulation similar to an Oscilloscope and analyze the signal properties?
Some of the annoying noises could be actual business being transacted.

Thanks

Curtis Scholl

BD, since you are obviously not a ham, are you going to use the information you
got about emergency use by non-hams to talk on the Ham bands? My guess is yes.
If you had a call sign you would be proud enough of it to put it on the end of
your emails. Mine is K5JOE, what is yours?
I see where you did some research on use of non hams talking on ham freq:

{{Is it legal for a non-ham to use a ham-radio in an emergency?
If so, what kind of emergencies would it be ok for such use? ;)
I've done a little bit of research (I admit it's not been much) and can't
find any reference to anything similar..
Thanks.
PS. Yes, I'm a ham.. Just wondering..}}

Yea right.... If you are a ham, tell us your call sign.
K5JOE

Hi All!

The Giant Page O'Shortwave Links is going "DC to Daylight!" Now covering all facets of the radio listening hobby, from longwave to UHF and beyond! And not only links, but the page now includes original features! There are only a couple non-link features now, but plans are to have a 50/50 split eventually!

http://swlinks.webalias.com

AOL Users: <A HREF="http://swlinks.webalias.com">Click Here!</A>

Over 200 links to radio-related sites all over the Web -- please enjoy! Radio is a fun and exciting hobby, and my sincere wish is for the Giant Page O'Radio Links to reflect that sense of excitement, the ability to both eavesdrop on and talk to the world! Any suggestions for links or features are most welcome, and you can mail these to fewtch@yahoo.com.

I have 1 of the type M68729 class C (i.e. FM) 30 Watts out average, 40 Watts max. These will replace older M57774 modual just fine. The input drive is 300 mW for 30 watts out. I am asking $50.00 including shipping to conus for them. RF parts wants around $70.00 for the same.

These are brand new never been used and still have the one inch leads on
them.

Thank You,

Bryan Fields, KB9MCI

And who pissed in your cornflakes this morning? Especially when he posted
both an Ontario callsign (VE3) and the web site URL?

Sheesh!

It works fine except when I am in Windows.

Hi all - I just took the test yesterday (passed both Tech and General written), and I'm trying to decide on a transciever. I'm leaning more towards a VHF handheld, or maybe a mobile - I don't have the space right now to set up any sort of antenna. I'd also like to start learning Morse, and I noticed that little .1 MHz allocation for it on the 2-meter band - does anyone ever use morse there, or is the majority of it on HF? Is it practical to try to use CW through a low power station like a handheld/mobile, and if so, what's a good rig to use?

Thanks!!

First off, congratulations and welcome to Amateur Radio.

I won't recommend any particular radio. There all basically good. A handheld vs a mobile. Mobile wins hands down. More power, more versatile, but you need a ps for the house.

As for .1mhz on 2meter for CW. Only the DX hounds and other types hang out there. Not a lot of cw on 2 meters.

Id recommend a course with a tape on the cw. Easier. Then pick up a older HF rig, listen around a bit. Keep playing with the tape. Go test, then join real ham radio on HF.

Dan/W4NTI

That slice of 2m is used by CW'ers who are using EME (bouncing signals off the moon). There may be some direct contacts too.

I'm not sure if this is legal, or exactly what the technical pitfalls
would be. However, it occurred to me that it could be extremely
beneficial if one could integrate, say, a 2M autopatch with
dialpad.com's FREE domestic longdistance service that is currently
online. Net results: one could make unlimited and FREE longdistance
calls in a wireless fashion. Wow.

Comments?

I have an ft-101ex I would love to sell or trade. I don't know what it is
worth, the AM recieve is a little low, and the transmit power is a little
low, but I think that is nothing big, i think anyone who knows the radio can
fix it easy. I would like to trade, possibly with cash for a radio I might
be able to use for a backup rig, maybe even something else with minor
problem/s If interested, email me at n1umj@mediaone.net   thanks, and 73
John

If you have a call book from 1978/79 that has a listing for KA1AAF
I would like to buy it from you so I can show the FCC that I did
have a license. They can not find it in their data base.

Thanks in advance and please Email direct.

I am looking for reasonably priced 8122 tubes. Please state new/used,
state, price and location.

Thanks,

KD6UW

That depends, what do you call "reasonably priced"?

Thanks for inquiring about the Icom W32A, It is in Mint condition and had
the original 5 watt battery and an additional 5 watt Icom Battery, Also
another 1000 MHamp after market battery.. Also included is the wall
charger, and an Icom Stand up Quick Charger, also an Icom Speaker Mic, and
an Icom Vox headset boom mic...
I am sure that you will acknowledge that this is a great deal...since this
is the second time that you have inquired about it...
Thanks for the interest in my listings..bobo...
I hope you have a Happy and Safe Fourth .

Greetings..

There may be some good news out of this after all..

"We are very sorry to announce the closure of Antec
communications on the 14/6/2000."

"10/11MTR. OPERATORS PLEASE READ ON"

Just in time for the license restructure......

Of course, for those that are just now beginning to venture into radio
theory for their amateur ticket first time after being occupied on the
11 meter band - this may very well be "new technology."

Amazing...

Cheers,
Gary

I wonder how many 'amateurs' will have such an antenna shipped from
Europe?

I am trying to find a 600 ohm element for an Astatic desk microphone. I have two one is white and one is red but I am led to believe, due to the low audio reports, that the impedence is wrong. Does anyone have any info such as the color I should be looking for, if that is how you tell the impedence. Since nothing is marked on the elements I am assuming the color is the way of telling the impedence.

Thanks

Barry

Barry,
    Do it the easy way.  Go to Radio Shack, get an audio transformer.

I posted then looked in my Radio Shack catalog and see an Audio output
transformer (273-1380).  I guess my only reservation is that I have never
seen something like this and wouldn't have a clue which wire goes where.

Hello everyone,

I recently purchased "Radioraft" digital decoding software (for use with a receiver/transceiver and a PC demodulator), here:

http://perso.wanadoo.fr/radioraft/

After purchasing the program and trying to give the author some positive suggestions about how he could improve his program (specifically, the way the copy protection technique he uses causes problems, and that it might be helpful to add fax capabilities), I got a very cynical and nasty answer from Fran�ois Guillet (the author of the program) telling me that "since I was a programmer maybe I should write the software myself, since I seem to know better than he does how to write and manage shareware." He repeated this in two Emails, using different wording.

This person does not know how to deal with a customer or how to provide customer support, and he is not open to suggestions as to how to improve his program, even from registered users. I would recommend you stay away from this software and purchase something else, from someone who is more pleasant to deal with, and is open to suggestions for improvements. This is the first shareware author I have ever run into who does not actively invite suggestions for improvements to his software, but instead is nasty, cynical and hard to deal with. Don't waste your hard earned money on his DOS-based software, look around for something else that will do what you need it to do, written by someone who is more flexible and willing to talk to someone who has just spent their money on his software and at least listen to constructive suggestions.

Just a thought,

Tim

Visit the Giant Page O'Shortwave links, a site strongly focused on shortwave broadcast listening but slowly branching out, including many links to HAM-related sites. Updated *often* (next update scheduled for tomorrow), and always being checked for 'dead links'.

http://swlinks.webalias.com

AOL Users: <A HREF="http://swlinks.webalias.com">Click here!</A>

Hope you enjoy the site, and suggestions for improvements are welcome. I can't get rid of the pop-up that appears when you access the page, that is the result of the webalias.com site redirector. I recommend you browse the links by right-clicking and selecting "Open in New Window," so you can easily return to the page without the pop-up window displaying again.

Enjoy,

Tim

For goodness sake, the guy's a shareware author, what are you expecting
from him? He'll almost certainly be writing the program in his spare
time, and perhaps he'd just had a bad day or something. (That happens to
even the best shareware authors! ;-)

Also, it's possible that his response may have been triggered by the
tone of your comments...

A grand total of 2 dollars and 47 cents. :-| I'm mostly doing it for the fun, but what's wrong with asking for some small reimbursement for the time spent on maintaining the site?

Actually, there aren't that many ads. A couple linked to Amazon.com, and 7Search (which is actually a reasonably useful search engine).

It's the pop-up ad that webalias.com inserts that's the real pain in the rear, as far as I'm concerned. The only other option is a page full of ads with a link to the main page, which IMO is even uglier.

I would have gone with cjb.net or another 'totally free' redirector, but unfortunately I'm already using those for other sites, and they only allow one site per customer.

I have also pondered buying a domain name through Network Solutions, but what's in it for me? Why should I pay $40/year? If swlinks.webalias.com is useful to you (and a few ads don't give you panic attacks) then visit all you like, otherwise it's purely your choice.

>Hmm.. You should create such pages for lotsa different topics..

>about any subject...

Sure, the page will be expanding in the future. I've been soliciting
people to come up with some interesting topics (I don't just want to
rehash stuff on other pages) but so far nobody has responded. I can't
do this all by myself. If you want to suggest pages with "lotsa
different topics," how about some suggestions? Cough 'em up.

  Ummmm, why not do it just because you just LIKE to?
Ads hurt personal sites. I hate them. Won't bother with them. BIG pain
the the butt.

Fine, you're obviously free to visit or not visit
swlinks.webalias.com. If a small section in the middle of the page
with an Amazon.com search box bothers you that much.... Oh well... ?

Cya,

Tim

Generally there are share ware programs that won't do as much as the "for
sale" version and sometimes it is difficult to tell the demo from the
shareware version. <:-))

What I dislike are the programs that require the disk to be in the machine
when you run it such as the latest versions of MS Combat flight Simulator
I prefer to put every thing on the Hard Drive.

Fortunately, aside of this traditional "shareware" world, now a "free software" world is developing. It does not seem to catch on for Windows yet, but an entire OS plus applications has been written that way.

Partially disabled and/or copy protected software does not exist in this world. Of course, it is more difficult to get payment for your work, especially when you are running a small operation.

Rob

Well, that happens.

I once found some cracks appearing in the Internet for a newly
released supersoftware, informed the author, and gave my ideas
how to improve...you know...
Guess what?
He was angry at me, so as if I were a criminal and
denied any conversation about this topic...

Enjoy, if you happen to find cracked software,
while even the authors of the programs don't care.

Within the last year there was a good article in QST on how to convert a

D104 to work with a modern rig. Even a kit available.

Based on that article I modified the Astatic mic I recently recieved.

My D104 had the TUG8 base containing an amplifier, which I reconfigured for
"floating" ground and to be powered by the microphone line. I get great
audio reports.

Shareware is a marketing method, nothing more. The word shareware, contrary
to what some think, does not define how the program works, whether or not
it is copy protected, or what the price is. A $5 program that completely
works, even if you don't pay for it, can be marketed as shareware, as can a
$500 program that requires payment before it's fully functional.

> Fortunately, aside of this traditional "shareware" world, now a "free
> software" world is developing. It does not seem to catch on for Windows

This used to be the case for every other OS too, usually when it was new.
It wears off quickly. Enjoy it while you can.

> Partially disabled and/or copy protected software does not exist in this
> world. Of course, it is more difficult to get payment for your work,
> especially when you are running a small operation.

The era of "open source, everything free for all" linux is coming to a
close. You'll continue to have the small minority who do stuff for free,
because it's fun for them. But it can't go on forever. Eventually, someone
has to pay for the software. Free software is like Communism. Great in
theory, terrible in practice.

In the event of immediate danger to life and/or property I don't care
about the legalities. It would be far easier to ask forgiveness than
get permission.

BD,
    Yes, in an emergency situation, one that involves life, or
'limb', or property damage, anyone can operate an amateur radio.
Not just an amateur radio, but any radio, in almost any manner
that's required.
    It revolves around being 'reasonable'. If you declare an

emergencey, you can do anything that is reasonable to rectify that emergency. You may be required to explain the situation later, but that's 'small stuff' if it's your 'neck' that's in trouble (or anyone elses for that matter)!

As a practical matter, who is going to tell you not to?

Emergency (i.e. immediate danger to life or property) communications are pretty much exempt from any of the licensing rules. Running out of Pampers probably won't do it, however, although some might think this is an emergency of major proportions.

We had a similar situation some years ago in St. Louis where our ham club member happened to also be a medical-type and figured his presence was better spent on an accident scene than behind the mike so his friend did it. We brought up the patch, summoned the medics and fire laddies, and worked thru it quickly and things worked out. The only one who seemed to care that his friend was unlicensed was our hero (his friend was ready to plead ignorance and necessity). One of our lawyer members dug up the chapter and verse in the regs where this was not only legal but encouraged.

In emergencies, Communications equipment is to be used to communicate.
Pretty much as simple as that.

Dick

My bet would be Los Angeles..... been in New York City and was surprised how
quiet 440 was, let alone 2m. 2m around Detroit area is fairly active both
on simplex and the repeater freqs... even quite a few side-banders.

Yep.... FCC rules allow almost anything when it comes to a REAL emergency
(life threatening, etc), including transmissions on otherwise 'off-limits'
freqs.  There's a distinct possibility that you'll have to explain yourself
and your actions later, but if the reason warrants, the FCC would stand
behind you.

See 97.405, it covers this in full detail:

(a) No provision of these rules prevents the use by AN AMATEUR STATION
in distress of any means at its disposal to attract attention, make
known its condition and location, and obtain assistance.

(b) No provision of these rules prevents the use of a station, in the
EXCEPTIONAL CIRCUMSTANCES described in paragraph (a), of any means of
radiocommunications at its disposal to assist a staation in distress.

Might have to explain your emergency to the FCC afterwards but this
covers EMERGENCY stuff but if Amateur gear is installed and it isn't an
emergency, then explainmthat also. This is a deep subject with many
interpretations but to say emergency comms are covered by Paragraph 405.

BTW-Amateur Station is defined as an installation of Amateur Gear.

Yes and even if it was not would the illegality stop you from helping someone for fearing your own hide?

Please visit my World Wide Web Site, you have never seen a page like it. You will see:

1. Access to oldies mp3 (albeit on an irregular basis)
2. Really interesting answering machine messages
3. A blond naked chic being held by a female ham!.
4. A guide to the best ham pages ever.
5. Hear Ted Kennedy really screw up in front of Clinton
6. Actually sounds of Bill Clinton "after the lov'in".
7. The writings of me and others on ham radio, hear a typical ham contact.
8. The warm side of K1OIK, hear me speak, see me with famous people.
9. An amazing card game that will shock others
10. Pictures of me and my family.
11. Did common German's enable the holocaust?
12. See now the future of ham radio.
13. How to pass the A+ Certification

```
Burt Fisher
A Plus Certified   Teacher of video, broadcasting and electronics
Net + Certified
Amateur call       South Dennis, Ma. (Cape Cod)
  K1OIK            Bacteria-the only culture most hams have

                         http://hfradio.org/k1oik/

The difference between Europe and America is that here in Europe a single person doing some programming in his evening hours and selling it via some small distributors is calling himself a hobbyist, while in America he says he is the president of a small company.

Thus, the American customers see him as a professional who should be held liable for any problem and should be harassed when he does not give in. They call him a pain in the neck when that doesn't work.

The problem with computer programming is that it has gone the same way as equipment homebuilding: in the early days of home computers, every owner wrote his own programs. So even when they accomplished very little, they at least had a feeling of what is involved with that.

As the number of computer users has increased, the fraction of users making anything theirselves has steadily dropped, and they become increasingly dependent on a few remaining activists who have to write all the software that keeps their machine ticking. I understand that this can be frustrating at times, but apart from trying to write your own stuff there is little that you can do. (the latter is of course much easier when you use an open-source system for which all sourcecode for the system you are running is on the CD's. then you can try to make a small modification to an existing program, instead of having to start from scratch every time)

It is like wanting to use a computer with soundcard for packet, and having a problem with making the required PTT driving circuit and the cabling: when you don't have the basic soldering skills and equipment, this can be very difficult to achieve. For the radio amateur of 25 years ago, it would have been peanuts.

Roger,

I made a mistake in typing in the wrong area of the reply section. Sorry for the confusion.

The person who replied to my reply eliminated your text. I stand by my point that cultural differences breed contempt and prejudice for people who are different.

Has anyone looked at the CFR47 part 90! That covers all emergency
coomunications. It use to be part 99 years ago.

Yup, there are several large areas on the west coast where 440 abounds.
As far as two meters, I'm surprised to find any areas where it's not heavily
used where there is a good sized population.

Here in Michigan I don't think there have been any two meter repeater
frequencies available for coordination for several years and even with
reginonal coordination, interferrence abounds.

I can work five or six repeaters with the mobile on 2, but not much on 450
up here. The only 450 in town is a "private" one and accessable by
invitation only.

  I'm not sure this provision applies to the original question (the use
of a ham radio by an unlicensed operator).  This provision seems to
apply only to the use of ham radio by a licensed ham (to seek assistance
for himself).

  Obviously most in this thread agree that emergency use of a ham radio
by an unlicensed person is acceptable, but I've yet to see any specific
regulations that would allow this.  Is anyone aware of the specific FCC
rule that applies?

So was I <:-))
Although it cycles somewhat and there are quiet periods, these areas will get really busy around the morning, afternoon, and evening rush hours and quite often on week ends. Then, depending on the repeater you will find lots of conversations evenings.

Don't look for much during and right after a contest on low bands <:-))

Roger (K8RI)

Rog.........

I can agree with your statement as to frequency pairs, but BUSY? That's a whole 'nother story! Even in the Detroit area, it's rare to hear more than two or three 2m repeaters active at the same time, EXCEPT during rush hour. EXCEPT during rush hour, it's unusual to hear more than repeater ID's on 440 here.

Bob, I'm fully aware of 97.401, 97.403, and 97.405. However, these are all parts of the code addressed to licensed Amateur Radio operators, therefore do not cover the original question (the use of a ham radio by an unlicensed operator during an emergency).

What I was hoping for, and what the original author wanted, was specific code and/or regulation that would allow the use of a ham radio by an unlicensed operator. Like him, I have not be able to find a specific rule that would allow this.

Yes, I'm fairly certain the FCC would not go after a person using any radio in a true emergency. But, while this seems to be the "standard practice" of the FCC, it seems strange that there is no specific code that would apply (providing specific "legal" protection).

For Auction:

Hamcomm/JVFAX (etc.) demodulator (comparator) with REGISTERED Radioraft v3.2 software. Use with a receiver or transceiver and a PC to decode RTTY, CW, ASCII, FAX and many other digital modes on the HF, VHF and other radio bands.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=376745837

This auction ends July 17 at 12:51:17 PDT. Reasonable reserve price -- if you're interested in digital transmissions on HF and VHF, I invite you to put your bid in. Check my feedback profile on Ebay and bid with confidence.

Enjoy,

Tim

Is this the same software you were referring to here the other day,
the one where you stated the author treated you like s*it when you
suggested some software improvements to him?

I might be interested; what's the "trial period" offered on this?
Is it returnable for a full refund for *any* reason?
Or returnable if I don't like it, for *no* reason at all?

Yes. I never did say the software is poor, only stated my particular issue concerning the author of it. The software itself seems to be just fine, aside from the fact that it's impossible to make even one backup from the "master diskette" you have to create.

>I might be interested; what's the "trial period" offered on this?
>Is it returnable for a full refund for *any* reason?
>Or returnable if I don't like it, for *no* reason at all?

Don't get all wet, Artie. This is an auction, and I'm not a big company like Drake or Grove. Night and day comparison. If you don't think so, you're welcome to go to a regular auction, place the highest bid on something, and then ask the auctioneer if you can return the item because "you don't like it." Most likely you would get laughed at; if the auctioneer was having a bad day you might be forcibly ejected, and sued if you refused to pay.

This is how it works: I offer an item to you in working but "as-is" condition (depends on the item -- I'm offering another one, an AMD K6-233 chip, with a money back guarantee -- Email me for the URL).

You check my feedback profile and decide for yourself if I am trustworthy. If you are unhappy with your "purchase" (winning bid), you can leave feedback that others on Ebay will be able to view. This will reflect negatively on my Ebay "reputation," which no seller cares for, especially someone with only a small total number of transactions like myself.

Also, Ebay offers dispute resolution of various sorts if there is a problem between the seller and the bidder.

It's actually a significantly better system than the typical "Ye olde in-person auction." And you don't have to listen to some guy diddling along vocally at 500 WPM, you can understand what is going on.

73,

Tim

Read the Communication Act of 1934. It specifically states that in the event of a true and actual emergency, all rules and regulations are suspended during the course of the emergency. This is for all non federal goverment services.

Greetings. I am searching for some old electronic musical instruments, accessories and related items.   I will consider anything from the 50's-90's, in any condition, EVEN BROKEN.

Old synthesizers, keyboards, effects, drum machines, MIDI or preMIDI modules, guitar and drum synth brains, vocoders, sequencers, etc.

Moog, ARP, Rhodes, Roland, Korg, Sequential, Oberheim, Crumar, Chroma, EML, Aries, EMS, PPG, RSF, Polyfusion, Emu modular, Serge, BUCHLA, Steiner-Parker, ANYTHING SIMILAR!

Roland TB-303 Bassline
TR-909 and TR-808 Rhythm Composers
MC-202 Microcomposer

If you have something I might want, please email me privately with price, condition and location. Thanks in advance and sorry if this message bothers you.

Examples of items I am looking for:
ARP2600
Minimoog
Moog 16 Channel Vocorder
Roland Jupiter 8
Roland TR-808 Rhythm Composer
Graphic Equalizer GE-810 and GE-820
Stereo Phaser PH-830

Voyetra Eight polyphonic synthesizer module
Lots of other stuff.

Sent via Deja.com http://www.deja.com/
Before you buy.

Hello Everyone:

I had 2 pieces of Ham radio software that was deleted from my HD. One was called pifilter.exe and the other was toroid.

Pifilter.exe allowed one to generate a pi filter comnfiguration for low pass and high pass filters.

Toroid allowed one to generate a configuration for a particular value. It gave the number of windings.

Anyone know where I can find these now?

I didn't mean to indicate that Detroit was a hotbed of 440 activity.
Actually in Michigan (The lower half of the lower peninsula) two meters is
pretty busy, but 440? That's where most go to talk on simplex and figure
few will be listening <:-))

I wonder how busy the simplex frequencies get? (52, 58, etc...)
I don't even remember what they are on 450.

The amateur programmers often don't know
how to set the parameters for compiling.

You have to use the same font size then,
which was used during compile.

a most common shareware software bullshit problem.

Never pay in advance.

So what ?  Look at all the flaws in the Microsoft stuff.  Biggest
softwear company and even they can not get it all to work all the time
in every case.

But then it is widely known (and proclaimed by themselves) that Microsoft's target isn't to write software that works all the time in every case.

Their priority isn't with fixing wellknown problems, but with adding new features to new versions, in a manner that will leave users of old versions in the cold with incompatabilities.

So, when your Windows95 with Office package does everything you want except it has some flaws that you would like to see fixed, what they do instead is release new software that will write documents that you are not able to read. So more and more you cannot read docments sent by your correspondents.

When you have shelled out the cash to upgrade, you will find that 30% of the flaws have been fixed, but there are now many more new flaws.

Even worse: while the old flaws sometimes crashed your system at unexpected moments, the newfangled flaws are often security problems that allow the rest of the world to take over your computer and erase all its files.

That is what Microsoft calls "Innovation".

Rob

I only saw 1 ad for amazon.com. There was a pic of his radio and the rest of the site is links. If the links are any good (didn't really look at them) it is a decent link page. No content of its own but not intollerable by any means.

Dear friends,
finally I managed to get my partly functioning VX-5 over to US. (I am from E
urope)

Though I would like you very much to advise me on the
procedure of warranty repairs.
1.Where to send ? (who pays for sending: me or Yaesu ?)
2.How long it will take to repair the rig ? (+/-)
3.Who pays the costs of sending the radio back ? (conus)
4. What document are required to accompany the radio ?

The problem with my radio is that it shows on S-meter only
to values 0 or 9.

Many thanks,
Mike

Hi Mike,

Contact Yaesu via email at amateurtech@yaesuusa.com or give them a
call at (562) 404-2700 (tech dept).

They'll be able to tell you what may be wrong and how long a repair will
take...

Best of luck,

John

You are the only one that is offended by someone listing ham radios for sale on a Ham Radio News Group... Duh!!! I do not know what your agenda is but if you do not want to buy any of my equipment or any one else's equipment that is listed on the ham radio news groups, why not just ignore the postings and read about something you like. I think your research as you call it is a little lacking. I am not a "BIZ" as you call it. The radios I list are in use at this time at my Ham Shack. But from your ramblings and bashing of people who list ham radios for sale, I see that you never let the truth stand in the way of a good story. You have never called me or emailed me, you want someone else to do your dirty work for you... but thank goodness the people whom you are trying to enlist for this have better sense than to bash a Ham, K5JOE, for listing quality ham radio equipment on a ham radio swap and equipment web page. I swear I have no Idea what the heck your agenda is...If you are not afraid to tell us your name and if you are a Ham, which I really doubt, tell us hams in the news groups you name, address and call sign..
Mine is available at www.qrz.com, is yours?
I apologize to everyone on the news groups for taking up the space to answer this basher, and will not respond anymore to his flaming.

Get a life bodu.....9 out of 12 postings here are from people who do it on a
regular basis, myself included...it is a service to the ham not a dis
service...if you dont think so, then buy a 1000 dollar radio from a guy you
never heard of in podunk and see what you get....Joe and others like him, offer

a chance to buy and sell radios at much better prices that the dealers and they back thier deal up.   If you wanna see some spam, let me know...Ill show you what spam is...Joe makes no bones about what he does, its legal and it only offends the few, not the many...I think if you study the "rules" you will see that commercial operator are the ones in cluded..those who make over 50% of thier living doing it.   I read these everyday, we should take pity on those who MIGHT be illegal, cause if this is all they are earning, they are starving to death....Now if you wanna see a messed up spammed out ng, got to rec.radio.amateur.antenns...those guys need a referee AND a shrink...   Just my 2 cents worth..73 Murray K5MDM   PS: at least we let you know who we are...who are YOU?

Murray,
I agreed with you the first time. The 3 duplicate posts were excessive.

My suggestion is, SKIP THE POST!!!!
Don't you know how to read a topic?
Ever heard of "filters"?
I guess your just another asshole trying to stir up trouble to
entertain yourself. Grow Up!!!

K5JOE has been a loyal user of the NewsGroups and a great guy to deal
with and you want to destroy him for that? You must be jealous!

73
KF6FOZ out!

No, he isn't the only one offended by someone using a newsgroup for their comical purposes. I will be complaining to your ISP as well.

Me, I come here to read about, ask about, learn about, and look for equipment.

I expect to see equipment advertised by individuals and companies.
True there is a swap group, but I'd expect to find modern, and other equipment here if it's related to ham radio.

Would ONE copy of this message not have been enough??
And I of course am already on record as being against any kind of
Commercial Spam.. The Charter is against commercial spam also.

Just my opinion..

Bob

NO JOE.. I am also offended by your misuse of this NG.
The Charter says no commerical advettiseing..

Is that so hard to understand??

Bob

This is the 4th identical copy of this response in this NG..
are you trying to prove something or do you need
help with your computer??

Hey Fuzzy Nuts.. The charter was writen for a reason. I guess it does

NOT accomidate "Joe's agenda" but thats life..

Thanks for reading my posting.

I have (2) HTX 212 2 Meter Mobile 50 Watt Excellent Condition with mic, mounting brackets and possibly manuals. I cannot install them into my vehicles (no space) and need to aquire a smaller 2 meter radio. Will make a GREAT DEAL if purchase of both at the same time. Will of course sell individually as well at a good price.

Purchase both radios $260.00 SHIPPED - Or purchase 1 radio at $130.00 plus shipping. Email only if seriously interested.

73 Daniel KC4OXP

Gordon could be wrong...but he states that "a score of 37 or more correctly-answered questions (74%) will earn you a passing grade..." That does seem to indicate he knows what he's saying. My local VEs agree with that as well. I suspect it is 37 because 38 would be 76%, essentially

```
raising the bar.  Therefore 74% was settled on instead.  Sensible in a
"institutional" fashion.  : )

Carmen

SUMMER Tech Class -Lindenhurst

Great South Bay Amateur Radio Club Amateur Radio Classes

Summer Technician class -Saturdays 9-11:30 AM

The Great South Bay ARC has scheduled Tech classes beginning on Saturday July 8, 2000 at 9:00 - 11:30 AM and will continue every Saturday until August 12.

All students are required to have the new version study manual Now You're Talking! All You Need For Your First Amateur Radio License 4th edition c 2000 which will be available in May 2000 from the ARRL, 225 Main St., Newington CT 06111 and your local Radio Shack.

ADDITIONAL INFORMATION

All classes are located in the basement of Babylon Town Hall, 200 E. Sunrise HWY, Lindenhurst NY in the Emergency Operations Center (ARES/RACES Room), access is gained via the door at the bottom of the stairs at the rear of Town Hall.

If you are interested in attending a class or you know someone who is, have them contact Phil Lewis N2MUN (631)226-0698 for further information or just come on down to class. The class instructor is Walter KA2RGI.

Information is also available during the GSBARC 2 meter info net every Monday evening at 7:00 pm on the W2GSB repeater, 146.685 -600 4Z(136.5) PL required. You may also write to:

Hi John,

Although 37 is enough to get the piece of paper, hopefully most will still strive to ace it. :)
73s,
Carmen

I have a nice Yaesu 8100 that will not transmit tone on the
VHF side.
It transmits tone fine on the UHF side. I understand there
is a way to
turn the tone up, but I cannot find the pot to do that. I do
have a schematic that is a copy, and it does not help.
Please give me some good directions if you can help.
email:risd@flash.net

Thanks, joe n5rma

CRO, or Classic Radio Online has changed names, sort of.
We are now known as CRO Wolfpack. Wolfpack being a collection of people interested in OTR Programing. Thus we are the pack, or hunters of TV.
Because of this, we have changed our OTR website TOTALLY. I hope you'll come and look at the new look, it is something wonderful! At least I think so. We still have the OTR station, 24/7 OTR shows with NO REPEATS, as well as online shows for you to listen too, however we also have the new look.
Enjoy!

the 8500 will scan for tones if the optional <55$> decoder is added. The radio works great, got 2.

Hi BD,

Go to the link below, and you can buy just the study guide for $14.95 +
$4.00 S&H. Fred Maia sent me a confirmation email immediately, and sent it
by Priority Mail.

http://www.w5yi.org/ExtraCl.htm

73s,
Carmen

The better question is: WHAT does this have to do with CB, unless to entice
people to the 2 meter CB band? We should go on the Hambo news group &
invite people to CB instead!!!!!
Dave!!!!!

Hello Gary,

I guess it depends how one chooses to view one's fellow hams. I view them
as essentially decent and hard working, and oddly enough I'm usually right.
(Even about the grumpy ones.)

Carmen

The question presented was 'how many questions do I have to get right in order to pass?' The guy wasn't trying to ace the test and display his electronic knowledge--he was just trying to get by. Another example of how people try to avoid work and effort, just to get by. Maybe the vec's should require 85% correct to pass?? If someone wants the ticket badly enough, they might just make the effort and study a little.
Gary

BD wrote:
>
> No... That test isn't a test of your knowledge of radio.. It's a test of short-term memory-skills only, for the majority of test-takers... Most of us just get by on the test, and some of us later learn about ham radio thru actual use.. Most, judging by my experience with trying to discuss anything technical on the local repeaters, forget most of what they learned while "flash card" studying for the test...

I've searched for mods for the Yaesu FT-51R. I found one that is supposed to enable receive up to 999MHz. One of the steps says to remove two diodes near the ribbon cable. I can't seem to figure out where these diodes are. I'm assuming they're surface mount diodes--but there seems to be quite a few surface mount components all over the circuit board.

Can someone give me better directions on finding the two diodes I'm supposed to remove?

Thanks,

Zach Beese

Still, the bottom line is that you were wanting to know just how much it
would take you to "get by" and no more. Glad you learned more after the
test, but that is a red herring. Don't feel badly though. You certainly
aren't the only one to want things to be dumbed down.

i have a Alinco DX 70t with the edx-2 auto tuner, I am running this in a
1991 Chevrolet Caprice v-8. The problem is ignition noise. Its been a
problem with every radio install. My dads car, also a 1991 Caprice has the
same problem. Were using resistor plugs. I need suggestions on how to rid
the car of this noise, have one filter in line, still doesn't solve problem.
noise is about 5-9 and s9 on am.
Has anybody else had these issues with the Caprice & or GM Cars? any help or
advice appreciated.

i passed the general, advanced, and extra tests by only studying the question pools. i was disappointed in the quality of many of the questions, and have sent comments to arrl-vec about them.

because of the freedom of information laws and the need for standard question pools, studying for the test from the pools will always happen. this is not necessarily bad, though.

the 10-1 ratio of pool questions to test questions requires an examinee to do a lot of reading and if the questions are geared toward 'learning from your mistakes' rather than a memorization of formulae we can educate while we test.

Now you resort to name calling? Who's retarded? Me, or someone who is
proud of the fact that they are lazy and just want to get by? Can't get
past your original point, no matter what you say or who you say it to.
You just want to get by with the bare minimum. Next time you have to
take a driving test, call ahead and find out how many questions you can
miss and still get a license. People like you are a danger to the rest
of us.

I haven't had that experience with ham radios, however I did at one point get nasty ignition noise on the car stereo. I have a '75 Dart (V-8, of course), and what I did, is install
8.8mm Accel Spark Plug Racing wires. They're supposed to keep more of the electrical energy inside their heavier insulation, so you will have better RF suppression (and more juice getting to your plugs!) Hope it helps!

I'm confused also.  After taking my ft-51 apart, there are doides all
over the board.  If the mod is for real <i am beginning to doubt it>
would some send out some specific info on the item to remove?
thanks

You can find complete instructions, including diagram, in the "Radio
Mods" section at www.qrz.com.  It works just as advertised.

Regarding ignition noise, it is hard to diagnose from a distance, but I'll try to give a pointer or two. I think it is unusual to have much ignition noise from a GM car, but it does happen with all vehicles from time to time.

1. Run all power leads direct to the battery.

2. Check all installation issues (antenna mount, coax for bad connections, etc.

3. Ground the radio via shortest route to frame/body.

4. Make sure that the body has good ground to frame--might even run gnd straps to frame at both ends.

5. Make certain antenna mount is grounded/installed correctly.

6. Ground hood and trunk on both sides near the hinges.

7. Ground muffler(s) with braided straps to frame. (Welds often do not provide a good RF ground.

8. Remove antenna and see if noise is still present with whip off. If it is, it is RADIATED noise.

9. If it is radiated noise, then you have to find what is radiating the noise to the antenna. I once found that ignition noise was following the taillight harness back to the light bulbs and radiating the noise onto the antenna. So remove the light bulbs in the taillights and seeif it stops.

10. I have never seen any inline filter remove ignition noise. So install caps across the alternator (for whine), and across the power leads for electric fuel pump (if any).

11. How long has it been since the plug wires were replaced?

These are just some of the things you can do to stop the noise. It may be something simple, or it may be hard to trace. Chevrolets are usually not very noisy, so I tend to think there is something amiss with the electrical system (plugs, wires, etc), or the rig/antenna is not installed properly.

Good Luck,

Jerry

You STILL don't understand the point. You were not interested in doing well on the test. You were not interested in knowing as much about the material as possible. That is all I am trying to get across. I am ever so proud that after being licensed you were able to pick up a few more details. With any luck, you will continue to do so. It is just appalling that anyone would deliberately shoot for the bottom of the barrel. I'm

WA2FSO,

First, lets find out if your getting the noise through the power lead, or the antenna. To do this, while the car is running, and your hearing the noise, disconnect the antenna. If you still hear the noise, it's comming through the power lead. If the noise disapears, it's comming in through the antenna.

While plug wires may make a difference, they aren't the only source of noise by any means. The same methods of getting rid of noise always apply; shield, by-pass, and a five gallon bucket of torriods. '91 usually doesn't have a fuel pump in the tank, but it can have an electric fuel pump. If so, by pass it with a capacitor. Try grounding the motor block to the chassis, body panels to the chassis, the radio/antenna to the chassis. Everything you can think of to the chassis. The individual body panels, etc, will make a small difference, but they are all accumulative. The 'total' can make a big difference.

One note on grounding straps. 'Braid' works fine when it's first applied. Over a period of time, it will deteriorate and the 'ground' will suffer. I'm not talking about tarnishing, I mean that the weather/polutants/etc will make it 'rot' away. Use a metal strap, such as copper flashing used around chimneys etc. The bigger the better, within reason.

Good luck.......

'Doc

PS - By-passing the power lead, etc, is never a bad idea.

I have a '91 GMC 1500 truck that probably has the same hardware as your Caprice. I get lots of noise off of the spark plug wires. I've found that replacing the cap, rotor, plugs and all the plug wires including the coil wire about every 50,000 miles helps keep the noise down. It also helps to clean the contacts on the spark plug wires periodically, especially the end that goes in the distributor cap and ignition coil because they get white powdery deposits that will create a spark gap. If your car is like my truck it has a separate ignition coil. Make sure to clean both ends of that coil wire. I found that the dealer had neglected to do so and I got an incredible noise on the radios. That high energy ignition will force a spark through an awful lot of crud to keep the engine running and create a lot of RF noise while doing it.

Have a friend who is using Magnecor CN wires from www.magnecor.com He
said it eliminated ignition noise after all other tries and wires
failed. You might have a look at their site.

Gary

Dear OM

I have read the postings here advising you of what to do. Its all good advice. Unfortunately I had a Chevrolet Caprice 1987 with the same problem as you and never was able to curb the ignition noise, maybe a couple of db's that was it. My 706's blanker made no difference, in fact it was overwhelmed.

I did all the things the others have advised and then some with no satisfactory results. I even went so far as to buy an ANC-4 noise eliminator and put a sense antenna directly into the engine compartment and tried to phase the noise out but to no avail. Just a waste of $160.

I even questioned the General Motors engineers who show up at Dayton every year in a special booth inside and they did not know what to tell me. Every solution they suggested I had performed with negative results.

I tell you this to help you avoid going through a very frustrating experience. These GM cars pump out 40kv spikes that no kind of suppression, even digital, can cure. Bad design or what, I don't know and no longer care. I would set my sites on getting another vehicle down the road and assure myself it is inherently quiet. As for me, I mobile as a portable on HF. As soon as I start the engine and begin to move I turn the rig off so my blood pressure dosen't begin to boil.

The only vehicle I ever had that I could HF mobile in was a diesel. Do yourself a favor and give up on the Chevy. Sorry to be negative but that is my advice to you.

Yes it works fine for me, just clicked on it in the above message and
was taken right to the Magnecor wires site. It is sp[elled correctly
and the URL is correct.

I noticed I could not access a few sties last night, might have been
net loading.

Gary

Find a nice pre-1976 Mercedes diesel for about $1500. Spend a few
thou restoring it. The only electronic noise comes from the cars
driving by you. The "computer" is a lambskin diaphram sensing the
airflow in the venturi at the intake. It never bothers 40
meters....(c;

Mine's a 1973 220D. Finest ham radio car in the world. The HUGE
battery and 85A alternator have no problem pulling the Yaesu FT-900

and souped up TenTec Hercules II running 650W output to a 15' homebrew monster with 6" Texas Bugcatcher coil and 36" cap hat. Only problem is the dash lights glow when you use it on 75 meters. Something must be resonant in the wiring...(c; The MECHANICAL voltage regulator never gets overrun with RFI at any power level.

It'll stall a Cadillac as it passes you on the interstate....hee hee.

Larry W4CSC....
Don't assume it's not dangerous when noone's aboard. The crossband packet node is running in the parking lot.....

My experence is with my 87 Suburban. The HEI ignition is a killer and my first rig, a DX70, had virtually no noise blanker whether in the mobil or out. So I

traded off and put a 706MKII in my Suburban. Ignition noise still a problem until
I got the Magnacore wires. Now that helped a bunch. I did all the grounding, etc
and cleaning you could imagine. I run the 706 with a Bandhopper screwdriver
antenna and use a Ten Tec amp. So far my HF mobil ops are really fun.

Alinco radios come with directions for hooking to a Kenwood or Yaseu
automatic tuner.  BUT the Alinco web site says the edx-2 is for use
exclusively with the Alinco 70 or 77.  I have had an edx-2 on my 77 for two
years.  Remember it does NOT operate like an SGC.

If you take Bill Kane's advice and give up on the Chevy, consider a Ford
with the 460 engine. I have a '96 F-250 pickup that I can operate HF mobile
in WITHOUT THE NOISE BLANKER. It really is that quiet, believe it or not.
I have been HF mobiling for almost 40 years in all kind of vehicles and have
never seen anything as quiet. YMMV, of course, so take a shortwave receiver
with you when you go car shopping and try to ignore the puzzled looks from
the salesman.

Actually, for about US$5, you may request the service manual. In it, there's not only a schematic, but also a parts list and calibration data.

my point was that since people *will* attempt to pass the test by memorizing the answers, the questions should be ones that are 'worthwhile' and 'memorable' and 'useful'.

i don't disagree with your 'driving test' suggestion. it would take some serious work to create it because of the difficulty of having a 'standard test' to be used by 'random' testers. however, it should solve the problem we have seen with new hams (and newly-upgraded ones) not really knowing the ettiquette and operating rules - which reminds me that i have to tell a new ham (for whom i'm the default elmer) that saying "are you out there" is not really appropriate....

BD wrote:

To Whom it may concern:

I seek a book on electronics/transistors with a concentration on biasing transistors (bipolar/mosfet/jfet etc) that doesn't leave one hanging.

I had a book by Malvino, Yellow binding, printed around 1973 as a textbook in college. I think it was "Electroncis Principles".

In the book there were explanations and experiments based on instrumentation. There were diagrams of configurations, hybrid parameters, both DC and AC.
It was a wonderful book but it assumed too much would be remembered from one experiment to the next. It left me behind 25 years ago.

I want a book that is for designing transistor amplifier, oscillator, and buffer stages for common emitter, common collector, common base and the bias methods like self bias, voltage divider bias, collector feedback bias, determining the load line (without a transistor tester) based on the parameters of the device.
I don't want the answers, just the means to determine the answers from the hybrid parameters and their relationships.
I would like to be able to calculate the input impedance
and the output impedance of an AC circuit.

I would prefer a book where transistors are not subset of a larger book. The book I seek is only about transistor circuit design. I would prefer a practical versus theoretical design base of knowledge. Voltages using Electron Flow would be desireable. The book should have more of an explanation of the parameters involved than my old Malvino book did.

I have the design manuals of W1FB and the ARRL. Even "Solid State Design
for the Radio Amateur" leaves something to be desired. It is a great book,
but unclear in some areas that I would prefer to be knowledgeable in.

Any one out there have any suggestions?

I have been to Borders, Barnes & Noble, and no soap except large books with
calculations and no real explanation.

Thanks in advance

Curtis Scholl

I can think of two, no three, ones that might help. One is in the ARRL
library, it is an RF design book, soft covered in red paper. Can't remember
the exact title. The second is Handbook of Electornic Calculations - McGraw
Hill, hard bound, it covers a lot more than just amplifier design so you may

want to borrow it rather than buy. The third is called, I think, transistor
circuits. All of these treat bipolars fairly well, they are not so good
with FETs.

  Two thoughts come to mind.
1 the crystal may be intermittant. They sometimes make poor contact
internally. This can occur if the hermetic seal is damaged, and the
crystal contacts have oxidised inside.

2 the oscillator coil needs tweaked. if you tune to peak oscillator
output, the circuit becomes hard to start, and sometimes will
oscillate only intermittantly, dependant on temperature and voltage
changes.

I have a possible cause. If the crystal is in a soldered small can what often happens is solder flux from the solder that seals the crystal holder can over time permeate to the crystal blank and make the activity of the crystal poor also lowering the frequency somewhat because of the added mass. Sometimes moving the crystal around or even changing the tweak capacitor makes it OK for a while. I had the exact same problem you described with an old FT301 one time. What I did which worked for me is to unsolder the base of the holder and clean the crystal with solvent. After drying thoroughly I resoldered the can back on and all was OK.

Good luck
Jim Ford, N6JF

Hi Groups:

I own a Ramsey QRP 30 meter CW rig and it's complement QRP AMP linear. I like the setup and
have made some nice CW contacts. With the rig alone I can get .4 W out. I decreased the value of the collector resistor in the driver circuit hoping to get a little more out of the transmitter. It worked and I got .5 Watts. But the 3053 final can't seem to keep up with the change.
Would anyone suggest multiple 2N3053's or another device capable of handling the power without producing so much heat?

I would like to find a replacement for the 2N3053 that would not heat up so much that the power drops. Is there a replacement that would handle more dissipation without so much heat? I did some looking and found a device with similar characteristics as the 3053 but with a higher power ratings. The 2N3553 looks somewhat similar. Anyone out there know of a replacement part with similar voltage/current/gain and hybrid parameters?

I forgot to mention the power output of the transmitter when attached to the QRP amp goes to 2 watts out the antenna! If I drive the QRP AMP to higher than this my AMP oscillates and goes into runaway. Talk about HOT transistors. But that is another subject..

Thanks and 73

Curtis Scholl

I am searching for a place to mount a dipole for HF, i have ruled out a tree because the closest tree is ~400 ft so i would need loads of feedline for that. I hear a lot of people talk about mounting dipoles in their attic. I would do that but my only concern before i do is that my house has a metal roof; would this defeat the purpose of mounting the antenna in the attic, or would it make any difference at all?
you can reply to my email address at hoover@uk2.net

Thanks for reading this 73,

Erik, KK7OA

Erik,
   Your right, 400 feet would be a bit long for a feed-line, and the metal roof would be a problem for an 'attic' antenna. What are the chances of mounting a 'push-up' pole at one end of your house? A pole would give you a place to 'hang' an antenna, and opens up a few possibilities. An antenna 'over' a metal roof isn't as difficult to do as one 'under' one.
   Or, a metal roof makes a 'nice' groundplane for a vertical antenna.....
                      'Doc

400 feet is rather unreasonable for a feedline run.  However, is it
possible to run a rope or line from the tree or other nearby support
structure to make up the difference in the length of the dipole??  Your
only other alternative would be to fasten one end of the dipole on a
point of your house and erect a pole or a tower to support the other
end.

Andy

Erik, yes, it would pretty much defeat the purpose. Take advantage of that metal roof. Run your dipole external from each end of your house using as high of poles as are feasible. Or locate a vertical with its base in the middle of that metal roof.

Cecil,
I would love to mount a vertical or dipole spanning the roof, the only problem is that the house isn't "mine", it is my father's, and he is not keen on the idea of antennas, especially unsightly ones atop his house.
:(and as i said in the message before, the closest trees are about

```
400 feet, and the only other support structure closer is the power pole,
and it would probably not be a smart idea, not to mention against
utility co. policy to fasten an antenna or support line to it. Hence the
reason that i was considering an isotron- it is small, not that
unsightly, and could be mounted atop the roof without that much trouble.

Well, the problem is easy to solve - recruit you father into ham radio. :-)

I got my first ham license when I was 14 in 1951. My parents didn't mind
me putting up a 40m downspout vertical in the back yard. A vertical might
be your best bet. The radials can be buried and thus are invisible. How
does your father like flagpoles?

Well needless to say, the old man is not into the idea of flagpoles, OR
becoming a ham either. I am coming to the conclusion that my best bet
would probably be to set up a mobile station in my truck, perhaps using
a screwdriver type antenna, as i usually have long commutes that i could
spend hamming. It seems that would work best, unless there is some other
reason why HF mobile would not work well. Anyway thanks for all of the
replies.

Nobody, except the squirrels, would notice my 40M dipole wires unless they knew it was there.
Perhaps you can work with trees rather than the house.
Al

Erik, you are close to an elegant solution to your problem.

Put a screwdriver on your vehicle and park it out in the clear away from the house. Run coax and two motor control wires into the house and rig. Disconnect from the vehicle when you move it. I suspect that given your other restrictions this would work as well or better than some other ideas and would afford you the comfort of operating in the house, etc.

Erik, although the MFJ Hi-Q Loop for 10-30m is a bit pricey, it
works surprisingly well. That's another option for you. I have
mine mounted vertically, in my modest size yard, on a 5' mast,
and it makes for an interesting "yard sculpture". :)

Some multi-band ideas:
```

An end fed long wire (400 ft to the tree) and work it against the metal
roof as a ground? It should send an outrageous signal off the end.
String a LONG dipole to the tree and center feed it with ladderline?
150+ ft / leg would make a nice radiator. I know of an installation
with a similar setup with 300 ft legs on a ladderline fed dipole....
gets out very well!! I do not think the long ladderline from the shack
to the center would hurt at all! Just keep it off the ground.
One more... end feed the 400 foot span with ladder line (think it is
called and end fed zep???) One side of the feed to the 400 ft wire the
other remains open.
Of course all of these would require a tuner of some sort... easily
homebrewed.

Where do I get ladder line? I haven't seen it advertised in any of the
usual ham catalogs, or do they just have it but not advertise it?

Erik

The Wireman, 261 Pittman Rd, Landrum, SC 29356, has a broad range
of choices. Their "Wirebook III" is a bargain at $3. Their phone
number is 800 727-9473

You might want to consider open-wire line from www.w7fg.com

Je bedoelt zeker voor een hogere frequentie zelf in te korten. Of is dit ook een 1 aprilgrap.

P.S. Vriendelijk bedoelt hoor.

Well, you asked: "Would anyone suggest multiple 2N3053's or another device capable of handling the power without producing so much heat?"

This means that you want a device with higher efficiency (more power transferred to the antenna and less heat) but this is difficult to achieve because you are maintaining the operation class that defines the efficiency (then more output power leads to more heat).
The transistor that can withstand higher power is just a bigger one. It is a real luck to get such a transistor with similar parameters (if you use the same external components it may work but likely with smaller performance than the maximum). The heat generated will be the same but that big transistor can work with higher temperatures.

So, I'd suggest you to maintain the same transistor and improve its cooling system, that is, increase the heatsink to eliminate the heat on the transistor itself, resulting in lower temperature.
About the final amplifier you have to see whether it is not being overexcited. In this case, it is probable that you cannot take much more power from it. But if it is only a matter of overheat too, use the same cooling improvement.

Gentlemen:

I have been in Thomas.Loc.gov and looked up the changes to the law. The Changes are S 2326. Senator Burns and Senator Wyden are very gullible. These guys aren't thinking correctly. They have modified with the word

"intentional" a few of the passages to read
"intentional interception" and not bothered to really read it for fallout.

Ladies and Gentlemen, I submit that we "intentionally intercept" when we build or modify a box to do just that. When we are tuning around the freqs we are trying to intentionally intercept those communications. Usually, any time we do this it is for entertainment purposes. It doesn't step on anyone's toes UNLESS SOMEONE TALKS about it. We do this on a casual basis, I.E. not everyday, or for harm or money. But we can not let the law be changed to be more specific in that it will cut off all those fun things and it will not define those fun things again.

The changes reflect no such "casual use" and therefore in my mind, if you have to have one type of intention, you have to define the other more casual one. This reminds me of HR514 that Rep Tauzin of Louisiana tried to pass, but from the Senate side. It still comes out to be the same old. The changes do rely on Chapter 118/119 of the Communications Act of 1934 for definitions of purpose. The text specifically outlining casual use such as Ham Radio, Ship to Shore and such will be stricken from the 47 CFR 18 USC Sec 605 with the proposed changes.

Senate Bill 2326 has not made it into the database. S 2326 is the changes to the 47 CFR 605 Section 750. The text is available though. See if this URL works for you:
http://thomas.loc.gov/cgi-bin/query/D?r106:1:./temp/~r106Mczgc7:e253211:

Write your Represenatives and Senators ladies and gentlemen, as the legacy of Newt Gingrich tries to rear it's head once more.

I have seen at least one handie talkie that was capable of quickly searching out the PL tone in use on a specific frequency, and was wondering if either the Yaesu FT-8500 or the Kenwood TM-V7A was capable of doing that also.

Also, does either model allow for any type of "priority" memory channel which, during scanning, takes precedence over the others when traffic is present on that frequency?

Am trying to decide if either model is markedly better than the other. I *must* have alphanumeric display, so the FT-8100 is out. A large number of channels is good.

Thanks!
Chris

Please schedule a QSO with us.

A 6th grade class at Jefferson Middle School in Rochester, NY is
looking for QSO's on Thursday, April 13 at 10:00 eastern time, 1400z.
We will be on for only 30 - 40 minutes.

```
 Primary freq.                14.250-14.280 MHz.
 If 10 meter is open:       28.350-28.400 MHz.
```

Look for W2SKY. Pre scheduling would help a lot by email to
w2sky@arrl.net. Operation is sponsored by the RARA Radio Coaches
http://www.ggw.org/rara/radiocoach.htm.

Please look for us.

73,
Peter Fournia, W2SKY

<<< The heat generated will be the same but that big transistor can work with higher temperatures.>>>

Not true. Temp limits the same; bigger package = better thermal transfer to the heatsink. Temp stays lower allowing greater power dissipation for same temp. rise. Thermal transfer is the whole trick; use a heatsink!!!   bye, sid

We don' need no steekin' fans!

I owned an 8500 and cant say for sure if it could do that..however i currently own a v-7 and unless i missed
something it cannot, i have found the majority of icom rigs do the tone scan, my w32a did, but man was it
ssslllllloooowww to scan for a tone, but it is a neat feature... if i had to pick for alpha numerics the 2 appear
equal but the 8500 does better in brigh sunshine then the cool blue does with it's color. the 8100 does
alphanumeric but only that or frequency display..both 8500 and the v7 can simultaniously show both. If i
actually had to pick..the v7 would win hands down..probally more of a personal thing <conventional
controls on the radio> and the v7 can be remotely controlled by an ht for cross banding situations the
8500 could not do that...good luck..john

Almost forgot... the one thing kenwood needs to learn from yeasu is the strain
relief on the modular jack
where the mic cord enters the rig...my 8500 was neatly tucked under the control
head the v7 is out in
front of the rig where it dangles and has become slightly pulled from the modular
connection, it hasn't
came apart or hurt anything, it just something probally in the future will be
needing some heat shrink..hi,hi..john

I have 2 of the type M67712 class AB 30 Watts out average, 40 Watts max. The input drive is 300 mW. I am asking $ 60.00 each for them. RF parts wants around $80.00 for the same.

These are brand new never been used and still have the one inch leads on them.

Thank You,

Bryan Fields, KB9MCI

You are right but when talking about internal (junction) temperatures.
I'm talking about external (case) temperatures. Higher power transistors
normally have better heat junction-to-case transfer; so, for the same
junction temperature, more heat is transferred to the case. As this is a
better radiator than a smaller transistor, the overall system will
withstand a higher output power.

Wake up America! They are trying to sneak in scanner restrictions by combining it with a cellular source tax law and adding a Senate scanner restricting bill on top of that.

Most wireless communications experts (non-CTIA members) know restricting radio scanners is the wrong way to protect your wireless privacy!

Because of these laws, citizens of other countries have the right and freedom to own unrestricted-unblocked radio scanners except non-government citizens of the United States of America.

Imagine if they had restricted citizen's reception to parts of the radio spectrum just after the invention of radio. There was wireless radiotelephone networks and radio receivers for the public before the development of cellular and scanners. They could have stopped the American citizens back then, but it would have been wrong and un-American.

Radio scanners are used to fight crime and for personal protection. Services can instantly be heard regarding emergencies, crimes, accidents, hazards, etc. This is the fastest way a Citizen can get time critical information. Thus, Citizens can better protect themselves and better assist Government. For volunteers and Government workers, the radio scanner hobby is used on-duty and off-duty to keep up with on their own services and as a mutual-aid tool for listening to surrounding services outside of their jurisdiction.
Radio scanners are used by:
Volunteer Firefighters -- who may hear news of an emergency prior to official notification.
Police Officers -- to learn of potential emergencies.

Wrecker Operators -- to learn of disabled vehicles.
Journalists and Photographers -- to receive first notice of emergencies.

Motorists -- who want to avoid accidents and know weather and road conditions.
NASCAR Fans -- to monitor talk between drivers and pit crews.
Consumers -- to learn of emergencies in their area.

Radio scanners can serve a genuinely useful function in matters of local, or even national, emergency. As one manufacturer points out, when the nuclear power plant crisis occurred at Pennsylvania�s Three Mile Island, local authorities themselves bought hundreds of scanners and supplied them to people living in the vicinity in order to keep them alerted to any important news or instructions.

Radio scanners helps save lives:
For example an old news story, a St. Louis helicopter pilot listening on a scanner heard police describing a man holding onto a bridge above a river. Police worked with the helicopter pilot to save the man�s life.

The 106th Congress is trying for additional radio scanner restrictions with S.2326 and H.R.3489. It started as H.R.514. These similarly worded bills add bad restrictions by requiring the removal of the SMR and PCS radio band in radio scanners and attacks legitimate decoding. SMR is the Motorola iDEN (e.g. Nextel "Direct Connect") 2-way radios used by Government and in the same radio band as Government public-safety radio systems. Also, note that radio scanners do not effectively receive PCS because it is very short-range microwave. Because of this, PCS requires micro-cells or many more cells compared to original 800 MHz cellular. In fact, Jay Kitchen, President and CEO of the Personal Communications Industry Association (PCIA) said "Quite naturally, therefore, some have called for more laws and more regulations. But certain pioneers in the wireless industry have found a technological alternative, one that offers the desired privacy without need for further federal government intervention. Enter digital personal communications services. Like a personal computer, PCS technology transforms spoken words into a complex binary algorithm of 1's and 0's, representing meaningless static to the "ears" of a scanner. In addition, there are infinite different combinations that PCS companies use for breaking up and reassembling the codes. This factor alone eliminates the casual hacker, but even if a determined eavesdropper attempted to intercept a PCS phone conversation, the sound they would pick up would be much like the squeaks and squeals that you hear when you log on to the internet or send a fax. Although nothing is absolute, it would take extremely sophisticated, expensive computers and devices, much like those used by the CIA and top law enforcement agencies, to possibly decode a PCS signal. Furthermore, in some PCS technologies, the coding scheme is changed from call to call, so even if a sophisticated eavesdropper was able to break one of the codes to intercept a call, he would be back to square one with the next call he targeted." Proof why S.2326 and H.R.3489 has a unnecessary wording and has parts that make it a ludicrous law.

They make these new bills sound good when they say it is for your privacy to stop eavesdropping but in reality gives them the dangerously increasing power to close Government radio communications from the average American and gives you the illusion it better protects you.

Local and State Governments and some departments of Federal Government started using the new digital Business Radio System in some hopes they can operate more in secrecy from the taxpaying Public and the News Media. No radio scanner can hear Motorola iDEN (e.g. Nextel "Direct Connect Group Call or Private Call") 2-way radio (non-cellular phone) communications.

Government closes Public-Safety communications when they use the proprietary Motorola iDEN radios and there are other things to note about misuse of this new technology. The Government uses tape recorders to keep records of their radio traffic on Government radio systems. Not tape-recorded for the record by Government is their Government use on the proprietary Motorola iDEN (e.g. Nextel "Direct Connect") radio systems. Some people in Government think the new Nextel will give them the power of privacy or secrecy unchecked by the taxpaying Public. In addition, organized criminals may find the use of Motorola iDEN (e.g. Nextel) helps them pull-off planned crimes easier. In addition, Motorola has sold the iDEN technology to other countries that do not have democracies (China, etc). Because of this new technology, we need new open government communication laws. Motorola, SAFCO, or Ericsson test equipment can decode iDEN and Cellular. It is extremely expensive and can be used by your government to discreetly eavesdrop on you, law or no law.

These letters against these bills say it best. H.R.514 has evolved into H.R.3489 and S.2326 in the 106th Congress.

Legislative Hearing
H.R. 3489, the Wireless Telecommunications Sourcing and Privacy Act
Subcommittee on Telecommunications Trade & Consumer Protection
April 6, 2000

Prepared Statement of Mr. Thomas E. Wheeler
President and CEO
Cellular Telecommunications Industry

Wireless Privacy Enhancement Provisions of H.R. 3489

I would also like to express my strong support for two other important elements of H.R. 3489. One such element is the incorporation of the text of H.R. 514, the Wireless Privacy Enhancement Act, legislation lead by Congresswoman Wilson which passed the full House, most recently by a vote of 403-3 on February 25th, 1999. (I would note as an aside, that this legislation was introduced in the other body last week.) This component of the legislation will further encourage the growth and development of wireless services by deterring eavesdropping and affording subscribers even more privacy protection than they have under current law.

Since the early days of wireless communications, Congress has tried to protect the privacy rights of wireless communications. The original Communications Act of 1934 made it illegal to intercept and divulge the contents of any radio communications without authorization. Over the years, Congress strengthened the laws governing wireless privacy when it became apparent that existing protection was insufficient. For example, in 1986 the Electronic Communications Privacy Act (herein, "ECPA") made it a crime to intentionally intercept wireless conversations or to disclose the contents of those conversations. ECPA also made it a crime to manufacture, sell, or possess a device that the person knows is primarily useful for intercepting wireless communications. In 1992, Congress amended the Communications Act to prohibit the manufacture and importation of cellular frequency radio scanners.

Unfortunately, despite Congress's efforts to protect wireless privacy, electronic eavesdroppers have found loopholes in the law. For example, one case was lost after prosecutors were unable to prove that the eavesdroppers had "intended" to intercept wireless conversations and another because the eavesdropper had not "disclosed" the contents of a conversation. Other cases were lost because the ability of the scanners to also scan non-cellular frequencies or perform other permissible functions made it difficult to prove that the device was "primarily useful" for scanning cellular frequencies. Moreover, because current law only covers scanners used to eavesdrop on "cellular frequencies," it does not clearly prohibit equipment that can intercept signals from newer PCS phones.

Emboldened by these loopholes in current law, hackers have developed a "gray market" for modified and modifiable wireless scanners. Some of these outlaws even advertise in magazines and on Internet web sites that their scanners have cellular frequency blocking components that can be easily overcome with minor alterations. The information and equipment necessary to make these modifications are also widely advertised, sometimes with blatant offers to unblock the cellular frequencies after the equipment is purchased.

The Wireless Privacy Enhancement provisions attacks these problems from several fronts. First, they expand the definition of the frequencies that may not be scanned to include digital PCS frequencies as well as cellular. I am pleased to say that this provision reflects a compromise between CTIA and the amateur radio community and it ensures that citizens are not prevented from listening to non-commercial radio frequencies like those in the emergency or public safety bands.

Second, they clarify that it is just as illegal to modify scanners for the purpose of eavesdropping as it is to manufacture or import them. It also directs the FCC to modify its rules to reflect this change. This provision will help reduce the growing "gray market" in modified and readily modifiable cellular and PCS scanners and digital decoders.

Third, they clarify that the Communications Act prohibits the interception or the divulgence of wireless communications, either one standing alone is prohibited.

Fourth, they increase the penalties under the Communications Act to make them consistent with the penalties for violating the Electronic Communications Privacy Act. Under the new penalty provisions, violators will be subject to a fine of $2,000, six months in jail, or both for a willful violation, and these penalties increase for repeat violations.

Finally, they require the FCC to investigate and take action regarding wireless privacy violations under the Communications Act, regardless of any other investigative or enforcement action by any other federal agency. This provision will help ensure that these newly strengthened privacy protections are fully enforced in the future.

The millions of Americans who use wireless communications deserve to have their privacy protected. CTIA supports your efforts to improve the security of wireless telephone calls, and again I commend Mrs. Wilson and this Subcommittee for your work on the Wireless Privacy Enhancement issue.
End Quote

Read it carefully, it goes slightly beyond PCS and Cellular.

They are distorting the issue of eavesdropping and radio scanners to scare the foolish!

It is wrong to restrict airwaves in a way that blames and punishes you and me instead of blaming and punishing the greedy cellular companies who, in the past, did not want to spend their money in secure cellular systems. Today, they have finally secured the cellular systems making radio-band blocking of scanners totally wrong. Reword the "Wireless Eavesdropping Protection Act of 2000" and reword the "Wireless Telecommunications Sourcing and Privacy Act" and amend the "Wireless Privacy Enhancement Act of 1998" to remove radio scanner restrictions because it is technically and logically foolish. Many other electronic devices can not be reasonably be controlled by American Constitutional Law and they receive cellular radio bands. Radio-band blocking and purposely closing Government radio traffic is not the American way.

Again they are, law after law, increasing the reception restrictions beyond cell phone communications into slowly closing government monitoring. In the past, part of Nazi law restricted radio reception with fear tactics to assure the growth of an evil empire. Their country developed into a prosperous society with the latest technology for their time, so their citizens did not care and government wanted to hide their wrong doings. The rest is history but it will try to repeat itself.

```

Wake up America! They are trying to sneak in scanner restrictions by combining it with a cellular source tax law and adding a Senate scanner-restricting bill on top of that.

Most wireless communications experts (non-CTIA members) know restricting radio scanners is the wrong way to protect your wireless privacy!

Because of these laws, citizens of other countries have the right and freedom to own unrestricted-unblocked radio scanners except non-government citizens of the United States of America.

Imagine if they had restricted citizen's reception to parts of the radio spectrum just after the invention of radio. There was wireless radiotelephone networks and radio receivers for the public before the development of cellular and scanners. They could have stopped the American citizens back then, but it would have been wrong and un-American.

Radio scanners are used to fight crime and for personal protection. Services can instantly be heard regarding emergencies, crimes, accidents, hazards, etc. This is the fastest way a Citizen can get time critical information. Thus, Citizens can better protect themselves and better assist Government. For volunteers and Government workers, the radio scanner hobby is used on-duty and off-duty to keep up with on their own services and as a mutual-aid tool for listening to surrounding services outside of their jurisdiction.
Radio scanners are used by:
Volunteer Firefighters -- who may hear news of an emergency prior to official notification.
Police Officers -- to learn of potential emergencies.
Wrecker Operators -- to learn of disabled vehicles.
Journalists and Photographers -- to receive first notice of emergencies.

Motorists -- who want to avoid accidents and know weather and road conditions.
NASCAR Fans -- to monitor talk between drivers and pit crews.
Consumers -- to learn of emergencies in their area.

Radio scanners can serve a genuinely useful function in matters of local, or even national, emergency. As one manufacturer points out, when the nuclear power plant crisis occurred at Pennsylvania�s Three Mile Island, local authorities themselves bought hundreds of scanners and supplied them to people living in the vicinity in order to keep them alerted to any important news or instructions.

Radio scanners helps save lives:
For example an old but true news story, a St. Louis helicopter pilot listening on a scanner heard police describing a man holding onto a bridge above a river. Police worked with the helicopter pilot to save the man�s life.

The 106th Congress is trying for additional radio scanner restrictions with S.2326 and H.R.3489. It started as H.R.514. These similarly worded bills add bad restrictions by requiring the removal of the SMR and PCS radio band in radio scanners and attacks legitimate decoding. SMR is the Motorola iDEN (e.g. Nextel "Direct Connect") 2-way radios used by Government and in the same radio band as Government public-safety radio systems. Also, note that radio scanners do not effectively receive PCS because it is very short-range microwave. Because of this, PCS requires micro-cells or many more cells compared to original 800 MHz cellular. In fact, Jay Kitchen, President and CEO of the Personal Communications Industry Association (PCIA) said "Quite naturally, therefore, some have called for more laws and more regulations. But certain pioneers in the wireless industry have found a technological alternative, one that offers the desired privacy without need for further federal government intervention. Enter digital personal communications services. Like a personal computer, PCS technology transforms spoken words into a complex binary algorithm of 1's and 0's, representing meaningless static to the "ears" of a scanner. In addition, there are infinite different combinations that PCS companies use for breaking up and reassembling the codes. This factor alone eliminates the casual hacker, but even if a determined eavesdropper attempted to intercept a PCS phone conversation, the sound they would pick up would be much like the squeaks and squeals that you hear when you log on to the internet or send a fax. Although nothing is absolute, it would take extremely sophisticated, expensive computers and devices, much like those used by the CIA and top law enforcement agencies, to possibly decode a PCS signal. Furthermore, in some PCS technologies, the coding scheme is changed from call to call, so even if a sophisticated eavesdropper was able to break one of the codes to intercept a call, he would be back to square one with the next call he targeted." Proof why S.2326 and H.R.3489 has unnecessary wording and has parts that make it a ludicrous law.

The real motivation for these laws is political money from CTIA and attempts to stop the average citizen from knowing what a Congressperson maybe doing wrong and illegal. Nowadays radio scanners do not receive digital Cellular but recall the past Newt Gingrich stories involved the now obsolete analog Cellular and political corruption.

Local and State Governments and some departments of Federal Government started using the new digital Business Radio System in some hopes they can operate more in secrecy from the taxpaying Public and the News Media. No radio scanner can hear Motorola iDEN (e.g. Nextel "Direct Connect Group Call or Private Call") 2-way radio (non-cellular phone) communications.

Government closes Public-Safety communications when they use the proprietary Motorola iDEN radios and there are other things to note about misuse of this new technology. The Government uses tape recorders to keep records of their radio traffic on Government radio systems. Not tape-recorded for the record by Government is their Government use on the proprietary Motorola iDEN (e.g. Nextel "Direct Connect") radio systems. Some people in Government think the new Nextel will give them the power of privacy or secrecy unchecked by the taxpaying Public. In addition, organized criminals may find the use of Motorola iDEN (e.g. Nextel) helps them pull-off planned crimes easier. In addition, Motorola has sold the iDEN technology to other countries that do not have democracies (China, etc). Because of this new technology, we need new open-government communication laws. Motorola, SAFCO, or Ericsson test equipment can decode iDEN and Cellular. It is extremely expensive and can be used by your government to discreetly eavesdrop on you, law or no law.

These letters against these bills say it best. H.R.514 is now H.R.3489 and also S.2326 in the 106th Congress.

Legislative Hearing
H.R. 3489, the Wireless Telecommunications Sourcing and Privacy Act
Subcommittee on Telecommunications Trade & Consumer Protection
April 6, 2000

Prepared Statement of Mr. Thomas E. Wheeler
President and CEO
Cellular Telecommunications Industry

Wireless Privacy Enhancement Provisions of H.R. 3489

I would also like to express my strong support for two other important elements of H.R. 3489. One such element is the incorporation of the text of H.R. 514, the Wireless Privacy Enhancement Act, legislation lead by Congresswoman Wilson which passed the full House, most recently by a vote of 403-3 on February 25th, 1999. (I would note as an aside, that this legislation was introduced in the other body last week.) This component of the legislation will further encourage the growth and development of wireless services by deterring eavesdropping and affording subscribers even more privacy protection than they have under current law.

Since the early days of wireless communications, Congress has tried to protect the privacy rights of wireless communications. The original Communications Act of 1934 made it illegal to intercept and divulge the contents of any radio communications without authorization. Over the years, Congress strengthened the laws governing wireless privacy when it became apparent that existing protection was insufficient. For example, in 1986 the Electronic Communications Privacy Act (herein, "ECPA") made it a crime to intentionally intercept wireless conversations or to disclose the contents of those conversations. ECPA also made it a crime to manufacture, sell, or possess a device that the person knows is primarily useful for intercepting wireless communications. In 1992, Congress amended the Communications Act to prohibit the manufacture and importation of cellular frequency radio scanners.

Unfortunately, despite Congress's efforts to protect wireless privacy, electronic eavesdroppers have found loopholes in the law. For example, one case was lost after prosecutors were unable to prove that the eavesdroppers had "intended" to intercept wireless conversations and another because the eavesdropper had not "disclosed" the contents of a conversation. Other cases were lost because the ability of the scanners to also scan non-cellular frequencies or perform other permissible functions made it difficult to prove that the device was "primarily useful" for scanning cellular frequencies. Moreover, because current law only covers scanners used to eavesdrop on "cellular frequencies," it does not clearly prohibit equipment that can intercept signals from newer PCS phones.

Emboldened by these loopholes in current law, hackers have developed a "gray market" for modified and modifiable wireless scanners. Some of these outlaws even advertise in magazines and on Internet web sites that their scanners have cellular frequency blocking components that can be easily overcome with minor alterations. The information and equipment necessary to make these modifications are also widely advertised, sometimes with blatant offers to unblock the cellular frequencies after the equipment is purchased.

The Wireless Privacy Enhancement provisions attacks these problems from several fronts. First, they expand the definition of the frequencies that may not be scanned to include digital PCS frequencies as well as cellular. I am pleased to say that this provision reflects a compromise between CTIA and the amateur radio community and it ensures that citizens are not prevented from listening to non-commercial radio frequencies like those in the emergency or public safety bands.

Second, they clarify that it is just as illegal to modify scanners for the purpose of eavesdropping as it is to manufacture or import them. It also directs the FCC to modify its rules to reflect this change. This provision will help reduce the growing "gray market" in modified and readily modifiable cellular and PCS scanners and digital decoders.

Third, they clarify that the Communications Act prohibits the interception or the divulgence of wireless communications, either one standing alone is prohibited.

Fourth, they increase the penalties under the Communications Act to make them consistent with the penalties for violating the Electronic Communications Privacy Act. Under the new penalty provisions, violators will be subject to a fine of $2,000, six months in jail, or both for a willful violation, and these penalties increase for repeat violations.

Finally, they require the FCC to investigate and take action regarding wireless privacy violations under the Communications Act, regardless of any other investigative or enforcement action by any other federal agency. This provision will help ensure that these newly strengthened privacy protections are fully enforced in the future.

The millions of Americans who use wireless communications deserve to have their privacy protected. CTIA supports your efforts to improve the security of wireless telephone calls, and again I commend Mrs. Wilson and this Subcommittee for your work on the Wireless Privacy Enhancement issue.

End Quote

Read it carefully, it goes beyond PCS and Cellular.

They are distorting the issue of eavesdropping and radio scanners to scare the foolish!

It is wrong to restrict airwaves in a way that blames and punishes you and me instead of blaming and punishing the greedy cellular companies who, in the past, did not want to spend their money in secure cellular systems. Today, they have finally secured the cellular systems making radio-band blocking of scanners totally wrong. Reword the "Wireless Eavesdropping Protection Act of 2000" and reword the "Wireless Telecommunications Sourcing and Privacy Act" and amend the "Wireless Privacy Enhancement Act of 1998" to remove radio scanner restrictions because it is technically and logically foolish. Many other electronic devices can not be reasonably be controlled by American Constitutional Law and they receive cellular radio bands. Radio-band blocking and purposely closing Government radio traffic is not the American way.

Again they are, law after law, increasing the reception restrictions beyond cell phone communications into slowly closing government monitoring. In the past, part of Nazi law restricted radio reception with fear tactics to assure the growth of an evil empire. Their country developed into a prosperous society with the latest technology for their time, so their citizens did not care and government wanted to hide their wrong doings. The rest is history but it will try to repeat itself in a different form. In addition, Communist leaders love the idea of restricting citizens from monitoring them.

Folks,

CTIA is moving fast -- fast enough that I'm taking off work to write my letters THIS MORNING to make sure I get them ready and out.

WRITE YOUR LETTERS! If you feel they won't make any difference, WRITE ANYWAY! It certainly won't make a difference if you don't do anything.

When you write, be courteous. Do not flame. Be consice as much as you can. Stick to facts -- a "stretch" of the truth kills your credibility.

I'll try to have a page available asap with respect to this issue...

Please don't sit on your duff and do nothing, unless you like the idea of your volunteer firemen without radios, for example!

Eric

I would think our second ammendment rights are far more
important than "scanners".. Of course I could always throw
my scanner at a home invader. <BG> I guess thats what
they do in Canada, Austrailia, England and other Countries.

as always, My Opinion.

> Wireless Privacy Enhancement Provisions of H.R. 3489
>
> I would also like to express my strong support for two other important elements of H.R. 3489. One such element is the incorporation of the text of H.R. 514, the Wireless Privacy Enhancement Act, legislation lead by Congresswoman Wilson which passed the full House, most recently by a vote of 403-3 on February 25th, 1999. (I would note as an aside, that this legislation was introduced in the other body last week.) This component of the legislation will further encourage the growth and development of wireless services by deterring eavesdropping and affording subscribers even more privacy protection than they have under current law.
>
> Since the early days of wireless communications, Congress has tried to protect the privacy rights of wireless communications. The original Communications Act of 1934 made it illegal to intercept and divulge the contents of any radio communications without authorization. Over the years, Congress strengthened the laws governing wireless privacy when it became apparent that existing protection was insufficient. For example, in 1986 the Electronic Communications Privacy Act (herein, "ECPA") made it a crime to intentionally intercept wireless conversations or to disclose the contents of those conversations. ECPA also made it a crime to manufacture, sell, or possess a device that the person knows is primarily useful for intercepting wireless communications. In 1992, Congress amended the Communications Act to prohibit the manufacture and importation of cellular frequency radio scanners.
>
> Unfortunately, despite Congress's efforts to protect wireless privacy, electronic eavesdroppers have found loopholes in the

> law. For example, one case was lost after prosecutors were unable to prove that the eavesdroppers had "intended" to intercept wireless conversations and another because the eavesdropper had not "disclosed" the contents of a conversation. Other cases were lost because the ability of the scanners to also scan non-cellular frequencies or perform other permissible functions made it difficult to prove that the device was "primarily useful" for scanning cellular frequencies. Moreover, because current law only covers scanners used to eavesdrop on "cellular frequencies," it does not clearly prohibit equipment that can intercept signals from newer PCS phones.
>
> Emboldened by these loopholes in current law, hackers have developed a "gray market" for modified and modifiable wireless scanners. Some of these outlaws even advertise in magazines and on Internet web sites that their scanners have cellular frequency blocking components that can be easily overcome with minor alterations. The information and equipment necessary to make these modifications are also widely advertised, sometimes with blatant offers to unblock the cellular frequencies after the equipment is purchased.
>
> The Wireless Privacy Enhancement provisions attacks these problems from several fronts. First, they expand the definition of the frequencies that may not be scanned to include digital PCS frequencies as well as cellular. I am pleased to say that this provision reflects a compromise between CTIA and the amateur radio community and it ensures that citizens are not prevented from listening to non-commercial radio frequencies like those in the emergency or public safety bands.

James Madison never imagined these "assault radios" when he wrote the
Bill of Rights.

Funny how the same people taking away the guns are the ones trying to
take away public monitoring of government radio traffic . . .

LARC HAMFEST 2000
SUNDAY, SEPT. 24TH
9:00 AM TO 1:00 PM
VENDORS SETUP 8:00 AM
ADMISSION: $6.00, TABLES: $8.00

Reserve Early! Get tickets now!

See the LARC Swap Net on "the net" as well!

The LARC 2 Meter Swap and the 80 Meter swap are combined. This net is found on 3.750 MHz LSB on Sundays at 12:00 noon ET hosted by Lary VE3LHG and again at 8:30 PM, Monday nights on the VA3LON repeater 147.060+ MHz hosted by Glen VA3ARC.

Invitation to the 22nd Nordic VHF/UHF/SHF meeting

We are pleased to welcome You to the 22nd Nordic VHF/UHF/SHF meeting, which will take place this year in Finland at 9th - 11th of June.

Meeting place is Kopinniemi in Inkoo, which is located at the south coast of Finland, a hour drive from Helsinki and two hours from Turku.

The meeting will follow the traditional form; a welcome barbeque on Friday, VHF-manager's open meeting and "Ham Dinner" on Saturnday, interresting lectures and demos during the whole
weekend. The meeting is a great opportunity to meet other enthusiasts and share experiences and knowhow of higher frequencies. Bring your own equipment along!

Accommodation during meeting is in 2-3 person cabins which has electricity but no water, intermediate facilities for camping and caravan are also available. Showers and toilets are at a service building nearby. Full range of meals will be served at the meeting.

Prices for accommodation and meals as follow;

Meeting accreditation (includes 1 lottery ticket)	50 FIM

Accommodation

2-3 person cabin per person per night	110 FIM
Caravan person per night	30 FIM
Caravan park per night with electricity	50 FIM
Camping per night	30 FIM

Meals

Barbeque (served at friday evening)	35 FIM
Breakfast (served on saturday and sunday)	30 FIM
Lunch (served on saturday)	50 FIN
Ham Dinner at saturday evening	100 FIM

Value pack

Accreditation, cabin accommodation from friday to sunday and all meals	550 FIM

Please book yourselves to the meeting using one of following methods;

By email; vushf-meeting@rats.fi
By telefax; +358-9-4398-1302
By phone; +358-40-500-6800

At booking, please inform your name and callsign, arrival and departure date, accommodation (cabin, caravan or camping) and who else will vacate the cabin you will. Also required the meals
you will take; barbeque, breakfasts, lunches and ham dinner.

Kopinniemi offers a great variety of recreational activity possibilities beyond ham radio activity; tennis fields, canoes, etc.

For a teaser info, there will be a test lab with measurement equipment up to 40GHz and phase noise measurement equipment for 2m radios open to all visitors during the meeting. Well-equipped
VHF/UHF/SHF radio station will be QRV 24h and expects lots of operators to visit and work!

Please follow the meeting web site at http://www.rats.fi/english/vushf2000/vushf2000.html for latest information!
Radio amateur Technical Society of Finland can be found at http://www.rats.fi/

YU DX Contest

Yugoslav radio-amateur organization (SRJ) and Yugoslav DX Club (YUDXC) have the honour of inviting amateurs from all over the world to take part in the YU DX Contest.

RULES FOR NON-YUGOSLAV STATIONS

1. Contest period:

Each third FULL weekend in April,
from 12:00 UTC on Saturday until 12:00 UTC on Sunday.
In 2000, YU DX Contest will be held on the 15th and 16th of April.

2. Bands and Modes:

All bands from 1.8 through 28 MHz, except WARC bands,
CW and SSB.
Avoid using the DX portion of the bands. Cross band/mode contacts are NOT permitted. The same station can be worked both in CW and SSB on the same band.

3. Categories:

A - Single Operator, CW
B - Single Operator, SSB
C - Single Operator, MIXED (SSB/CW)
D - Multi Operator, MIXED, Single Transmitter

When changing the band, category D participants must operate a minimum of 10 (ten) minutes on the new band.

4. Exchange:

RS(T), plus number of your ITU zone.

5. QSO points:

QSO with station from your ITU zone - 1 (one) point.
QSO with station on your continent (not your ITU zone) - 3 (three) points.
QSO with DX station - 5 (five) points.

6. Multipliers:

Different ITU zones and different Yugoslav prefixes on each band count as multipliers.
Same ITU zone and same Yugoslav prefix may be counted as a new multiplier only once per band, irrespective of the mode.

7. Final score:

Total sum of the QSO points from all bands, multiplied by total sum of multipliers from all bands.

8. Log instructions:

a) All times must be in UTC;
b) All sent and received exchanges are to be logged;
c) Indicate a multiplier only the first time it is worked on each band, regardless of the mode;
d) Logs must be checked for duplicate contacts, correct QSO points and multipliers. Submitted logs must have duplicate contacts clearly shown;
e) Entrants are encouraged to send logs on diskettes, or to email the logs via Internet to yu0srj@beo.ampr.org

IBM MS-DOS compatible diskettes are recommended. Logs should be send as ASCII files, or you can use K1EA's CT program, version 8.45 or higher - use the option for IARU HF CHAMPIONSHIP CONTEST;

f) Use a separate log-sheet or computer file for each of the bands;

g) Each entry must be accompanied by a summary sheet (on paper), showing all scoring information, station description, contestant's name and address in BLOCK letters, and a signed declaration that all contest rules and regulations for amateur radio in the country of operation have been observed;

h) More than 2% unmarked duplicate contacts in the LOG will be a sufficient cause for disqualification. For every unmarked duplicate QSO, 3 (three) previous contacts will be deleted;

9. Deadline:

All entries must be postmarked no later than 30 (thirty) days after the contest. Indicate YU DX CONTEST on the envelope.
All logs should be sent to:
Savez Radio-Amatera Jugoslavije
YU DX CONTEST
P O Box 48
YU-11001 BEOGRAD
YUGOSLAVIA
or via e-mail to:
yu0srj@beo.ampr.org

CRITERIA FOR TROPHIES AND CERTIFICATES:

1. TROPHIES
a) Winner's cup (or plaque) in each category for NON-YU stations;
b) Winner's cup (or plaque) in each category for YU stations.
2. CERTIFICATES
a) Top three contestants in each category for NON-YU stations and top three contestants in each category for YU stations;
b) Every station which completed more than 250 contacts, including 25 different YU stations.

WE HOPE TO SEE YOU IN THE YU DX CONTEST!
Savez Radio-Amatera Jugoslavije & Yugoslav DX Club

- - - - - - -

Hope to meet you!!!
(Let me be your 251st qso! :))))

Best regards,

yu7uf, known as

I've heard there are new easy requirements for ham licensing as of 4/15/00.
I figure it is time to apply.

Where can I get the new study material?
Where near San Jose California would I find an examiner?

Thanks in advance,
  Dave

I have one of the type M67712 class AB 30 Watts out average, 40 Watts max. The input drive is 300 mW. I am asking $ 60.00 including shipping each for them. RF
parts wants around $80.00 for the same.

These are brand new never been used and still have the one inch leads on them.

Thank You,

Bryan Fields, KB9MCI

I saw the movie FREQUENCY on April 15th. I enjoyed it a lot. It uses ham radio in a very positive way. It is PG13 rated so it will be more accessible to children. If you like it, promote it.

Read my review at the RARA web site

Peter,
    Better yet, if you liked the movie, and if someone
asks you about it, then promote it?  If there doesn't
seem to be much interest about the movie, maybe you
shouldn't 'promote' it.  May be people, even if they
liked the movie, get tired of hearing about it?

I saw "Erin Brockovich" and loved it. It didn't use ham radio at all but rather Julia Roberts's endowments in an excellent film, a true story, about chromium poisoning of an entire community in California. I believe it's R rated so kids keep away and most of the scatterbrains on this board who wouldn't understand it anyway. I liked it so I'm promoting it.

ICOM IC-T7H HT, 4 months old in like new condition. Covers 2meters and 440. 6 watts high (at 13.6 volts in) and 1/2 watt low. Open this link for ICOM's specs http://www.icomamerica.com/amateur/dualhand/IC-T7H.html and here for a photo http://www.icomamerica.com/amateur/dualhand/T7Hphoto.html Includes BP-170 AA battery case, BP-173 Battery, BC-110A charger, Box, and manual. Was given a new Yaesu so this radio is not needed.

Hi. I'm an electronic musician looking for some old electronic music making equipment. Old synthesizers, vocoders, effects, drum machines, sequencers, or other devices. Especially interested in gear with knobs or slider controls. Also looking for any modular patchable or analog synth, complete or parts. BROKEN OK.

Moog, ARP, Oberheim, Roland, Korg, Sequential, Buchla, Serge, Paia, Yamaha
CS, EML, EMS, Polyfusion, Maestro, Mutron, EH, etc.

Please email me privately with price and condition if you have something or
know someone who might. Thanks in advance!

examples of things I am looking for:
Minimoog
ARP 2600
Korg MS20
Simmons SDS7 Digital-Analog Drum System (brain only)
Roland MC-202 Microcomposer
Moog 16 Channel Vocorder
Roland Jupiter 8
Roland TR-808 Rhythm Composer
Graphic Equalizer GE-810 and GE-820
lots of other stuff....

Sent via Deja.com http://www.deja.com/

On Mon, 17 Apr 2000 21:41:41 GMT, an orbiting mind control laser caused
krasnegar@mindspring.com (mike weber) to write:

>>OTOH I went to see the sneak preview of _Frequency_, the new Dennis Quaid
>>movie. While it requires a "willing suspension of disbelief" as my HS
>>english lit teacher used to say, it didn't mangle ham radio as bad as I

>>feared it might.
>>
>The trailer on that looked pretty good.

It's pretty much an action-adventure murder mystery (serial killer) with a little bit of SF thrown in, using ham radio (and a massive aurora borealis) as the SF vehicle. They did a good job dealing with the change in timelines, they got the ham radio gear pretty much correct given the resources of a NYC firefighter raising a family, even to the multi-band HF beam up on the roof, and they gave the Dennis Quaid character the proper callsign for a NY general-class licensee of the time. My only knock on the ham equipment was the lack of a bug or straight key on the desk. Can't ask for too much more, and it might provoke some interest in ham radio among the people that see it.

And on the subject of ham radio, I passed the extra-class exam on Saturday before I went to see the movie. YIPPEE!

Full specs
http://www.micronet.co.il/950/955specs.htm

Asking $150 shipped...obo

The Net-950 Mobile Data Terminal is designed to
                 be installed in a vehicle and to provide a
                 two-way messaging interface for the driver in
                 Fleet Management and Automatic Vehicle
                 Location systems. Specially designed keyboard
                 and display provide user-friendly communication
                 between driver and fleet manager. The Net-950
                 Mobile Data Terminal has been used with various
                 communication networks such as CDPD, GSM,
                 SMR.

                 A low cost terminal, installed in vehicles as
                 part of a car fleet management system.
                 Used to display incoming messages and
                 initiate outgoing messages, transmitted
                 through a radio communication system.
                 Pre-programming the terminal with
                 "canned" message texts and forms enhances
                 its ease of use while saving on air time.

I need a used/dead/discharged battery in the BP82 series to fit an
IC-2SAT, or even better, a BA11 bottom cap. If you have any or all of
these items that you would be willing to sell, please email me.

Thanks in advance,
Erik Hoover

Actually, it doesn't have the frequencies the Air Force and CIA use to communicate with the flying saucers that make test flights over the Nevada desert from the Groome Lake (AKA Area 51) facility late at night. I think that they use some super-secret kind of digital spread-spectrum modulation, too.

Let's not get scatological about my last name.

Obviously, you need to listen to Art Bell late at night and become more informed about Area 51. I would expect there to be some real interesting monitoring opportunities in the Nevada desert if someone could figure out the modulation system that the captured space aliens who are imprisoned there revealed to the US government when they taught us how to build flying saucers.

It's just a thought.

Don't forget to print a few copies on your color printer.

Great chart! I was able to open it online....

Does anyone know how to save a copy of the .pdf file for use offline? (I would like to take it to work and open it there on a puter with a nice color printer...and save it on a disk for future reference.)

Thanks!

DM

Just click on the floppy disk icon towards the upper-left-hand area and it's possible. I did it myself for later printing.

And it is too detailed to print on a single page (reference another post).
I tried it on my 1440 dpi printer and the print was too small to be useful.
I'll have to come up with a plan B. Nice chart, and thanks to the original

poster!

Exactly.

When I first found that chart I wasted most of a day trying to print it,
or a part of it.

Let me know if you figure out how to do it.

Well, for hahas, I printed one at 800dpi on a tek phaser 360 printer.
With a loupe, it's possible to read the text, but at that magnification,
the dots that make up the colored bars are a distraction.

Part of the problem is they're putting so much information on one page,
that even if you could print it at actual size, (42 by 26.88) the type
would be smaller than you'd use for a normal letter.

Perhaps the Government Printing office sells copies of this chart?

That chart is included once a year in "Communication World" and several other communications industry house magazines. I work for a Cable company and we post the new one each year on our head-end door. We fight over who gets to take the old one home.

If you work for a phone company, cable company, cell company, or any other such business check out the house organ magazines laying around the office. It will be in one of them once a year. It folds out to about 36 X 42 inches.

You can also order it somewhere....A government office I think.

Is that site still around? I was referred to that same web site over
four years ago. I signed up for the free chart twice, but never
received one. Is this company still in business, and still giving away
free charts?

It's not quite that simple.

If you are using Internet Exploder, saving to a file from a PDF will leave
you an empty file.

Instead, go to the link to this file (or make a link), right click on the
link and select 'Save Target As...' from the menu.

I purchased a CD-ROM covering all 9 volumes of Police Call, 1999 1st edition from Grove Electronics in Feb. 2000 for $34.95 US.

I cannot get the CD to install properly and have had virtually NO support from "Pozilla Software" who is the writer of this data base.

I have made countless calls from Feb. to present with unreturned calls.

So much for their help line and customer care. It is none existent.

Think twice before you throw your money away on this product.

So far it sits gathering dust, totally useless to me. It does NOT function!

Pozilla Software has a great "I don't care about the customer" attitude.

I just acquired a "brand new" vectronics 300DLP tuner off of ebay. When i unpacked it and hooked it up, I discovered that the meter on it does not work. I had another fellow ham check it out, and our consensus was that the tuning part still works and tunes, but for some reason the meter will not show any readings, and we have ruled out that the meter circuitry itself is faulty because both needles on the meter aren't working. So maybe it has to do with the connections to the meter or some other circuitry? Does anybody have any ideas on what could be wrong with it, or how to go about troubleshooting it or reparing it?

Thanks,

Erik

Yes... we've been told (my group of VE's) that it'll be a week to 3 weeks
before the 'hump' of instant upgrades works it's way through the VECs and
the FCC... BTW, it's also the same story on Vanity Calls... demand went
through the roof with restructuring.

I upgraded to General on Saturday the 15th as well. Hasn't shown up anywhere
yet, and with the ARRL website down, I can't get any info. But the VE's have
10 days to submit, and then the VEC at ARRL have 10 days after that to

```
submit, so I suspect that for many of us, it'll be a while longer.

When I upgraded on March 08 from Tech to Tech Plus, it took until March 31!
Here's what happened: the FCC "upgraded" me on March 29 from a Tech to a
Tech! I called ARRL and a VE told me that there were "hundreds of errors"
for Techs upgrading to Tech Plus. An "internal correction" was applied on
the 31st and I am finally listed correctly as Tech Plus!

I turned in my paperwork on the 15th at the ARRL test session in
Charleston, SC. I still have no indication of the upgrade.......

A friend turned in HIS paperwork at the April 19th test session the
Wescars group gave in Goose Creek, SC. He's already gotten his
upgrade on the FCC ULS and has dropped the /AE from his call.

Wescars - fast

ARRL - slow

Why?.......
Larry

Expect even more delays and errors. The current load has to be
tremendous for the VEs and the FCC.

I upgraded to Advanced about a year ago, when things were not so
busy. In the process, the FCC had replaced all occurences of
"OR" in my address with "AZ", my state designator. This changed

xxxx W. North Lane
Peoria, AZ

to

xxxx W. Nazth Lane
Peazia, AZ

I emailed the FCC and let them know about the error and asked
to have it corrected. I was sure that the license would not
even make it through the US Mail (although it actually did,
score one for the US Post Office). When they finally corrected
it, they only corrected the city. I wasn't until I upgraded to
Extra, a couple months later, that they finally got the whole
thing corrected.

All I can say is "Good luck on all your upgrades". I hope none
of you run into the problems that I did.

Hi!

I'm also looking into this antenna, I would really appreciate a copy of anything you find out!

I have found that it is cheaper to buy one direct from Italy rather than through the UK importer,
Waters and Stanton.

Anyways, let me know what you find out about it's performance.

Which VEC did you use? Also, was your CSCE for your credit in hand issued by
the same VEC?

Are you sure it was the FCC? Might have been the VE's handwriting...

It could have been that, but all the copies I have, from the
upgrade process, look to be pretty clear. Some of the forms
I had to fill out myself. Maybe it was my handwriting.

I just thought that since I have been on their books for 35 years
that they wouldn't have any problem. My General upgrade, which
was only two months before the Advanced, went through with no
problem. Same VE, same handwriting.

From other postings, it seems that I am not the only one that
this has happend to. Could be their software wasn't Y1.999K
```

compliant.

Well, go figure. In the end, it all got fixed. It was just
annoying at the time.

Do you know of a deserving youth Amateur Radio who could be a candidate for the 2000 Newsline Young Ham of the Year Award? This bit of information is for you. Please spread the word to all Amateur Radio operators and Amateur Radio clubs you know, and consider nominating that young individual who has contributed to the betterment of Amateur Radio. Nomination Deadline: MAY 30, 2000

The nominating period for 2000 "Young Ham of the Year Award" is now open. Originally known as the "Westlink Report Young Ham of the Year," this award program, now entering its second decade, is presented annually to a United States licensed Radio Amateur (Ham) who is 18 years of age or younger and who has provided outstanding service to the nation, his community or the betterment of the state of the art in communications through the Amateur Radio hobby/service. (Please see application form for details.) Any continental United States (48 contiguous states) FCC licensed Amateur Radio operator aged 18 and younger who has used Amateur Radio to significantly contribute to the benefit of the service, to the sate of the communications art, to their community or the nation is eligible to be nominated.

All nominations must be submitted BEFORE May 30, 2000 on an official application and accompanied by verification materials. Applications forms are available for a self addressed stamped envelope mailed to the 2000 Young Ham of the Year Award % Newsline, 28197 Robin Avenue Santa Clarita California 91350. These nominating applications are also available for electronic download from our website at http://www.arnewsline.org. With continued corporate sponsorship, the award presentation is scheduled take place this summer at the 1999 Huntsville Hamfest. The Huntsville Hamfest, Chaired by Mr. Scotty Neustadter, W4WW, is one of the nations largest and most popular Amateur Radio conventions. It is held annually the third weekend in August at the Von Braun Civic Center in downtown Huntsville and usually attracting some 7000 attendees.

Anyone have any ideas for running a power cable from the battery to inside
the passenger compartment on a 96' Chevy Blazer?

Thanks in advance!!

Lottoman,
    Look around on the firewall, see if there is a plugged access hole. If so, cut out the 'stopper' enough to feed a power lead through it. If no access hole, drill one large enough for the power lead AND a rubber grommet.
    There are access holes 'all' over a vehicle, just gotta find one....

Speaking from my own experience, I passed my 5wpm and General Written exams
on March 26th and the Tech Plus Upgrade was posted on the FCC site on April
25th so it'll take about a month (or a lil' more).
Oddly, April 25th was Marconi's birthday.

------------------------------------------------------------------------

I up-graded from advanced to extra on the 15th.of April and it was
posted at the FCC site on the 20th. So I would say it all depends on how
soon the VEC sends in the paper work....

I asked a fellow ham that had a qso with mir back in 97. He said that made the qso with only 50 watts. I asked him via e-mail if I used 200 watts would it be good. He told me that 200 watts would be overkill. If I used 200 watts would the cosmonauts tell me to turn down my power? I was wanting to find out if 200 watts would really be too much or would it just give me a better chance at the qso before I purchased the 200 watt amp. Thanks for your time and help.   Thanks, Sam

The VEC no longer "sends in the paper work".  Any more, anything a VEC sends
in
is electronically uploaded & no paperwork is sent.

If I remember correctly, the '96 Blazer was the same body style as the '89-'98 pickups. Working in a LMRS shop, I've punched and grommeted holes in the passenger side of the transmission hump (on the vertical riser) with some success (fairly quick, but you get "greased" by the undercarriage - so that's the "quick and dirty method"). On my own '91 Silverado; I didn't want to try that - wanted to keep spinning drill bits away from the 3-day old clutch slave cylinder. I found that the broadcast radio antenna coax went out through a HUGE THICK grommet just below the A/C evaporator box on the passenger side firewall. It took some time, but I managed to pull two #10 stranded lines out to the power buss next to the A/C dryer without cutting into the grommet; just "stuffed and cussed" it through with the antenna lead.

Before anybody starts yelling: 1.) Yes, stray RFI could be coupled from the new power leads onto the coax shield; if repeat IF you aren't using some kind of noise choke on the power. My thought's (and my Elmer's at the shop) was that strange noises on the stereo were preferable to erratic operation of the ABS system should go out the driver's side. 2.) That power buss is where the high-amp accessories and the alternator are connected to the battery. This almost guarantees the need for a noise filter on the radio lines; but is a much cleaner location to tie down the B+ leads. I've powered much gear from those points, 75W Micors, MASTR II - based IMTS rigs, solid state HF amps. My own gear has been powered from that point since July '91 with virtually no problems - can't say *zero trouble* - when one of the diodes gave up in my alternator, the chokes couldn't keep the ringing noise out of 6M TX with the brick on. Since it also didn't charge the battery properly, I just decided to replace the alternator. Problem solved.

Just my own opinion .. I have decided that I don't like EBAY sales.

I would much rather come to some agreement instantly with some other post which sells an object ... and to find out immediately whether or not I will get the object. Waiting out several days to find out whether or not I win a bid does not get me the coveted object usually. To my experience, most EBAY bids wildly exceed the worth of the object. OK for the seller, I guess, and for those who simply MUST have it at any price.

I agree. No amp is needed, my first year I got into the packet
station with a meager 5w through an HT whip but got a mobile rig and

ringo ranger after that. 50W is PLENTY even though some guys use much more. If you use a beam 5-10w would probably do you just fine.

When Norm Thagard was on board MIR, I worked him several times on FM voice using ten watts from an old Yaesu memorizer and a homebrew five element quad made out of refrigerator tubing and scrap lumber. I have some pictures of the set-up in the space and astronomy section of my web site.

Praetorian,

I see this complaint all the time about eBay. There is a very simple solution to your gripe: Just look at items that are about to expire. If you don't like the bid price at that point pass, else make a bid and in a short time, maybe even minutes you'll know if you won. Actually a faster response time than contacting most NG sellers. Also, eBay has a better search facility.

73,

Casey

Praetorian wrote:

Hmm... and he uses a NOSPAM email adress to cross-post his spam, ain't
that ironic.
Maybe we should all get a hotmail account and go bid on his junk. Be
generous, it's not like he would actually expect anyone to follow

through!

200W would be rude to the other people on the ground. 20 watts will do fine. That's all I used when I worked FX0STB.

now:
I worked (and so did a lot of others) MIR using 1w and
a rubber duck inside my house some time ago when the
APRSheads were sending packets to MIR. At that time,
it was all simplex on one freq. No doppler, all on 2m.

Actually, less. If I remember correctly, when the FCC moved to 40 channels, the tightened the spec for type acceptance. 23 channel radios could be continued to be used by their current owner but no-longer could be sold, new OR used. This was force method to phase the older radios out of existence. But we know how enforcement goes.

Hi thanks for reading.
Just thought i had to let people see how happy our customers are.
This letter is about our 5 element 11mtr antec beam.

> Hello Chris, just a quick note to let you know still very impress with the
> Antec 5 element antenna. I am hearing stations in my radio that I haven't
> heard in a long time I know me propagation is good but the antenna just
keeps
> bringing voices out of the radio speaker as though they are only at the
back
> of the set talking to me I haven't had the radio working like this for
years
> I had the old antenna up for five years now I know that was five years to
> long. the antenna is just brilliant very pleased to have the sense to
change,
> (don't worry Chris if I thought the antenna was rubbish I would still be
> sending you a note saying just that,) I just cannot find a wrong word to
say
> about it, the only word I can think of is, (thank-you for supply me with
it,)
> this has put radio right back into my blood stream in a big way back. I am
> sitting here at night and listing to south America calling at 5/9+ 20 and
> going back to them at 5/7- 9 with only about 50 watts I haven't use the
radio
> as much at evening time before when television is at its peak. I will have
to
> get the rear of the van measure for the 3 element mobile quick fit, I will
> need Bill to make all the elements so they can be stored in the roof of
the
> van but with having the bedroom in it limits the length in the roof of the
> van. I will get it measured so I can get my order in. enough for now I
will
> say goodnight, regards ???????? ???????

RE: D2T Antenna ????
Date:
Wed, 12 Apr 2000 10:20:47 -0500
From:
"Basilotto, John" <j-basilotto@tamu.edu>
To:
"'radioranch@qth.com'" <radioranch@qth.com>, Mike Tatum
<miket@cybatek.fsnet.co.uk>,
"Basilotto, John" <j-basilotto@tamu.edu>

I think the D2t is a worthwhile expenditure. It does everything the
literature [website for info and reviews] says it will do so I don't
think I
need to go into details. I've received 59 reports on 160 but do not have
a
another 160 ant to compare with. My signal is down about 2 s-units on 80
and
40 compared to my full wave loop ants. On 20 the D2T is at least as good
as
my reference dipole. On 17m and above I get great reports; performance
seems
to be on a par with a small 3 element multiband beam.

Bottom line. I got what I paid for and am very happy. On the other hand
if
you can put up a full size ant. this is what you should do.
73, John

PS. Murray feel free to use my endorsement of the antenna. I think many
hams
could benefit from this product.

8008442784 but first you must go to the internet webpage and fill out a registration form to get your "L" user name and password. The instructions come when you register. Print them out so you'll have them when dialing into the FCC intranet.....

You'll need the 128-bit encryption version of Netscape, and ONLY Netscape, if you intend to pay any fees via VISA/MC. FCC won't accept any other encryption to send them your credit card payments. If you don't have it, you can still fill in all the forms, etc, but must send your payment in with the voucher form printed on your printer, manually, to Pittsburgh's FCC payment center.

If you use 128-bit encrypted Netscape, you can do it all at once on ULS. I was issued W4CSC vanity call in just a few days. They still do everything manually to give them all a job, you know....

Larry W4CSC....Wish someone had helped me get through this maze when I did it....(d^;)

This is clearly a miraculous antenna - certainly changed my views about the laws of physics.

I must get one in case I want to work someone when the band is dead - my normal antenna only picks up dx when the band is open......

Dave,
   When you get one of these 'miraculous' antennas, would you
send me the measurements, and explain any 'new' techology they
are using? I wonder if you could 'scale' this 'miracle' antenna
for use on other bands...

Hello OM's of others,
Thanks for reading this Newsmessage.

Who can help me to get documentation for the antennatuner Kenwood AT-50.
I hope elektronicaly (the easyest) , but copies are alsow good.
There are more people looking for it, so jou help them to!!
In any case thanks in advance for it, and i hope jou can help me (us) with it.

Hi,
I will be driving from central PA to Dayton to deliver a
boatanchor and have some room. . . .so. . .if you are
interested in a working and complete Johnson Viking Ranger
II with D-104 mic and manual copy @ $400 or an FT-102 (T/R
relay a little sticky, otherwise excellent condition and
operation) + manual + extra filters + AM/FM board + MD-1 mic
@ $475 - I can deliver at Dayton on Fri. or Sat AM. please
contact me by email. . .

Oh yes, while I am thinking of it. I have a BC-669 too. . .this
has 4 6L6Gs driving a pair of 807s . . . obviously military
surplus and not new but has all the right mod iron and
components for a nice AM transmitter. . . .

Hi,

According to Gordon West, page 13 of the new study guide, 37 or more out of the 50.

Hope this helps,
Carmen
